The Harris Abattoir Co., Limited
St. Lawrence Market

See Evangeline Land

No less than 15,757 tourists visited Grand Pré Memorial Park, Nova Scotia, during the 1929 summer season. The park is the property of the Dominion Atlantic Railway which acquired it before the war years and of it a beautiful memorial to Evangeline, the heroine of Longfellow's epic of the Acadians. Evangeline's home, in its original state, forms the chief attraction of the Park and the National Acadian Society erected a memorial church on the property. A beautiful statue of Evangeline, executed by the well-known sculptor, Hubert, was placed in the Park by the Dominion Atlantic Railway and the grounds changed from a complete wilderness to one of the most inspiring spots in Nova Scotia during the last ten years. In all years

the spire of the memorial

is open to the public every year to the men who the men of Evangeline's time and a little entrance gateway, constructed of logs, was built by the railway. Thousands of tourists from all parts of Canada and the United States flock to this place where the memory of Evangeline is perpetuated. During the 1929 season there were 6,24 visitors from the United States, 5,73 from the other provinces of Canada, and 160 from foreign countries. People from Belgium, Czechoslovakia, Austria, Porto Rico, Algiers, India, Sweden, Mexico, Japan, China, Australia, Poland and the Philippines came to see the park this summer. The total attendance constituted a considerable advance over the 1928 season when 12,669 visitors were registered at the park entrance.

Buckingham Palace

The Socialist Journal "The Citizen" Gives Interesting Insight into the London Home of the Sovereign

LITTLE CHEER

George Lansbury has been swept in preparing the surprise of the Prime Minister of a newly installed government that he might now act towards Buckingham Palace. There can be no more ridiculous a residence for a ruling monarch than Buckingham Palace. It is the case of all that matters not to be a royal residence, but the king's house, the monarchy of a nation, a violation at its gates, which acts as an excuse for a trifling roundabout that the public sees of Buckingham Palace is grossly ridiculous. Behind that more or less dignified front a dilapidated palace which superficially appears to be crumbling away.

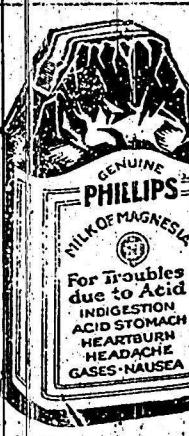

"From the gardens of the Palace the building is ugly and ill-constructed, and the tops of its walls are stained with hideous bluish stains, stains which impart a mournful air to the summit of a gorgeous city. And inside? Well, being invited up to see the King's picture gallery saw an addition merely inconveniences and staircase, all stained and faded, and falling. Just below, heavy, dark-coloured, hairy hang from the easements, and the carpets on the floor are of the infallible royal red. The famous Queen Victoria must have missed the palace."

The King has a superb collection of pictures though it is a pity no one ever hung them correctly. The gallery walls are packed with many of the finest examples of the Dutch School from Rembrandt to Vermeer and Tiepolo. [Hobnail] But the King can't be seen without periscope-like adders. One interesting thing about this collection is that the young

one, who is the son of the King, is fond of telling this story against himself. He once sent his secretary to protest against his son's conduct, but the King, who had just returned from a long tour of the world, said to his secretary, "I've always said so."

Use Minard's Liniment in the Stables.

"Where, in 17th asked the dazed man as he came round after being knocked down by a bus in a busy London street. "Ex you are, guv'nor," said a street hawk, who stood in the doorway of Lord, a one pony."

When Food Sours

At two hours after eating many people suffer from sour stomach. They call it indigestion. It means that the stomach never has been over-stimulated. There is excess acid. The way to correct it is with antacids. Each bottle contains full directions—any drugstore.

harmless. It has remained the standard with physicians in the 50 years since its invention.

It is the quick method.

Results come almost instantly. It is the approved method. You will never use another when you know.

To be sure to get the genuine Phillips' Milk of Magnesia, prescribed by physicians for 50 years in correcting excess acids. Each bottle contains full directions—any drugstore.

Where the Leaves Go

Have you ever wondered what becomes of all the leaves that fall from the many, many trees in our city, especially in public playgrounds, and in parks? When you playfully run through the gutters and run along the sidewalks and hear the swish-swatch of the crisp, many-colored leaves, have you ever thought that they may be used for useful purposes?

In most large cities and towns, all the leaves in the gutters and parks are gathered every day by the Park Department men and are used to cover the bulbs they plant during the winter, and also as a substance for potting plants. They are not burnt and thrown in the dumps as most of you probably thought.

Every morning in the fall of the year you may see a number of men with large rakes out in the streets raking up the leaves into large piles. And how do they pick them up? Well, they are provided with a special device which consists of two poles, connected by some heavy material like a metal log. They just lay this on top of the pile and scoop them up, lift in a lift, and put them into large bags with deep bottoms and expansion wings. The leaves are so light that the wagons are filled in two or three minutes.

But where do the store so many of them and why?

As you know, there are many fountains and ponds in the parks and each fall these are drained dry. This is an excellent place to store them and they are weighted down and also wet. This work takes place from day to day until the trees are bare—about Nov. 30.

When the leaves are all gathered, they are set down again, and left until they are ready to be used for fertilizing. Then they are taken from these "stone-houses" and used to cover the shrub and other bushes which are being planted in the parks. They serve as blankets and keep the plants warm during the cold winter months. Since they are frost-proof, old Jack Frost cannot reach the tender roots of the bushes when they are covered by this leaf sheltering.—Christian Science Monitor.
