

Sunday School Lesson

December 28, 1934. **Text: Thou shalt love thy neighbor as thyself. Leviticus 19: 18.**

ANSWERS:

I. MINISTERING TO THE NEEDS OF THE NEIGHBOR. Matt. 22: 39.

II. **LOVING ONE'S NEIGHBOR.** Luke 10: 27.

III. **PURE RELIGION.** James 1: 27; 2: 14-17.

EXPOSITION:—The law of human kindness appears in the Old Testament as well as in the law against affecting in any way a widow or orphan, and in the prohibition of murder, even in the case of the oldest brother, ch. 25: 4-5. The law of love to the neighbor extends also to the stranger, Lev. 19: 34. The commandment to love the truth and mercy (kindness) of the knowledge of God, Rom. 4: 11; 12: 10. The law of love to the neighbor is the law of love to the neighbor, ch. 12: 12. The law of love to the neighbor is the law of love to the neighbor, ch. 12: 12. The law of love to the neighbor is the law of love to the neighbor, ch. 12: 12.

ILLUSTRATION:—The law of human kindness appears in the Old Testament as well as in the law against affecting in any way a widow or orphan, and in the prohibition of murder, even in the case of the oldest brother, ch. 25: 4-5. The law of love to the neighbor extends also to the stranger, Lev. 19: 34. The commandment to love the truth and mercy (kindness) of the knowledge of God, Rom. 4: 11; 12: 10. The law of love to the neighbor is the law of love to the neighbor, ch. 12: 12. The law of love to the neighbor is the law of love to the neighbor, ch. 12: 12.

ILLUSTRATION:—The law of human kindness appears in the Old Testament as well as in the law against affecting in any way a widow or orphan, and in the prohibition of murder, even in the case of the oldest brother, ch. 25: 4-5. Farm Notes

Winter Stabling Unnecessary for Growing Heifers

Heifers more than six months old and breeding bulls do not require stables during the winter months in the climate of this neighborhood of the city of Quebec. This has been demonstrated at the Cap Rouge Experimental Station where for fifteen years this class of stock has been wintered in single board sheds closed on the north, east and west sides and open to the south-east exposure.

In a recent report of the Station, published by the Department of Agriculture at Ottawa, the Superintendent states that more than 100 heifers and 100 breeding bulls have been wintered in these sheds, many of the heifers were found to be in excellent condition in the two, three and four year old classes. Mr. Langlois, the Superintendent, states that the heifers that were necessary for the making of housing practice, when the cows were young.

It is regarded by the Superintendent as important that the stock be wintered outside the sheds after the first of September. As the cold weather approaches, it is necessary to provide the animals with a heated coat of hair.

Market Hog Fairs

Swine Club fairs and bacon hog fairs are doing much to improve the quality of hogs raised in the Province of New Brunswick. During the season recently closed, 100 swine club fairs and two bacon hog fairs were held in the province. At these fairs 550 hogs of excellent type were brought into competition for prizes, and more than eighty percent of them were sold cooperatively through the Maritime Livestock Marketing Board. These fairs also served a useful purpose in providing improved breeding stock to districts not so highly favored in the quality of the pigs they are producing. From the exhibits at the fairs there were selected 100 hogs of excellent type for breeding and of good blood type for return to the country of production for breeding herds.

Some Club fairs and bacon hog fairs were organized and operated by the cooperative action of the federal and provincial Departments of Agriculture. These fairs, however, provided the prize money for the different classes. The Swine Club fairs differ from the Bacon Hog fairs in that the latter are held in districts which are able to provide a fair cut of the hog, and the former are held in districts where the hog is sold in bulk.

A valuable feature of the Swine Club work is the educational work given to members to make them more intelligent in their selection of stock and in their management of the farm. This is done by the holding of lectures and by the distribution of leaflets and by the holding of exhibitions of the best hogs in the district.

Ancestry in Herd Improvement
In the improving of milking herds by the use of purebred sires it is not sufficient that pedigree sires be used. It should be known with certainty that the sire is from high producing ancestry. At the Cap Rouge Experimental Station it was found that daughters of good sires and purchased sires were giving less milk than their mothers had given at the same age.

In cases where this happened it is explained by the Superintendent that the ancestry of the sires had not been observed in relation to milk production. In his report, the Superintendent states that the sires used were not from high producing ancestry.

Wintering Horses in Open Sheds
Open sheds facing the south have been proved to be suitable for wintering horses and other stock at the Cap Rouge Experimental Station. Although weanlings and horses up to twenty years of age have thus been wintered for the past sixteen years none of the animals have suffered, but on the other hand they have shown ruggedness and vitality. Mr. Langlois, the Superintendent of the Station in his report for last year published by the Department of Agriculture at Ottawa points out that foals dropped later than June as well as sick or weak animals should not be subjected to shed wintering but stabled in comfortable houses.

Both young stock and older animals to be wintered in open sheds are recommended to be housed later than the beginning of September. By so doing the practice of wintering the animals for the winter is not only prevented but the necessary cost of their housing is reduced.

The sheds were single boarded structures closed on the north, east and west sides with walls sufficiently tight to keep out draughts.

Fertilizers for Potatoes
In the growing of potatoes on farms where stable manure is plentiful commercial fertilizers of proper mixtures may be used with advantage. To demonstrate the value of commercial fertilizers when used singly and with manure, potato fields on a number of the Illustration Stations operated by the Department of Agriculture at Ottawa were treated in different ways, with a section of farmyard manure receiving 20 tons of fertilizer to the acre.

Other plots of similar size were treated with 10 tons of the manure, and 100 pounds of the fertilizer, and a third plot with 1500 pounds of chemical fertilizer and a fourth plot was left unfertilized. The fertilizer used was one made up of four parts each of nitrogen and potash, and eight parts of phosphoric acid. These demonstrations were carried on for three years at eleven stations in Nova Scotia. The three-year average yields were from the farmyard manure plot 196 bushels of the crop, from the plots receiving manure and fertilizer 254 bushels to the acre. The plots receiving only the commercial fertilizer yielded 225 bushels to the acre, while the unfertilized plots gave less than 100 bushels.

Surely We Can Take Exception to the Term "Sport"

Photograph here shows bag of deer taken in the Upper Ottawa River Valley, near Pembroke, Ont. All game follows, no doubt, but many disagreed with their viewpoint.

Canadian Cheese In Second Place

New Zealand Leads in Supplying Products to British Consumers
London.—New Zealand outpaces Canada in supplying cheese to the British market. Reports issued by the Empire Marketing Board show that \$4 per cent of cheese imported into the United Kingdom in 1933 came from overseas parts of the Empire. New Zealand led Canada with 1,550,000 hundredweights. Canada was second with 920,000 hundredweights and Australia third with 74,000. The report gives the result of a detailed study of the London's market for cheese. The survey covered over 300 retailers and 100 millionaires of cheese in the docklands at Deptford. (Cheese)—New Zealand, Canada and English is the staple cheese of the great mass of the population. While cheese is the favorite of the home market, the preference of the foreign market is for mild cheese. Still, as well for Christmas, only in cold weather. One dealer said people at Gorseholm, when dining out, but did not take home with them.

R-101 O.K.

London.—The government-owned airship, R-101, which has just completed its trials by flying 1000 miles back and forth, is over England, Scotland and Ireland, proved itself as a result to have provided the best of its kind, having steel girders and heavy oil engines. It carried a load of 145 tons, attained 70 miles an hour with only four of its five engines working, proved easy to manoeuvre and safely weathered the heaviest and fiercest gales. The airship was met in Scotland but it did not give any trouble. Major Scott also said that it was much warmer in the ship than on the ground. We got plenty of sleep and a good dinner. At night the 550 feet high wireless masts showing 100 feet above the fog looked weird when one had believed the ship to be flying well clear of all ground objects. We flew at an average speed of about 60 miles per hour. Had fuel on board to last for at least another 26 hours.

Britain's Traffic Laws Face Change

Speed Limits for Private Cars Likely to be Abolished
London.—A movement is underway to speed up Britain's traffic by abolishing speed limits for private automobiles and extending the speed limit for buses. It was learned from reliable authority that the new road traffic bill, which is expected to be introduced in the House of Lords will seek to abolish all speed limits for private automobiles and extend the present speed limit of 12 miles per hour for buses to 200 miles per hour. The present private automobile limit is 20 miles per hour.

Sobriety and Prohibition

Canada's Prohibition: Scarcely less significant than the recent growth of illicit drinking in the United States is the change that has come over the social habits of England in the last fifteen years, during which period there has been a decline of 50 per cent in the national consumption of beer and spirits. The change is particularly noticeable to the Englishman who, after years abroad, returns home on leave; he is at once struck with the almost complete absence of drunkenness in the streets, which used to be a familiar Saturday night feature in industrial towns in the days gone by. Recently published statistics are illuminating in this respect; whereas in 1910 the number of convictions for drunkenness in England and Wales was 172,130, the figure had fallen to 55,611 in 1925.

Reduction of Land Forces

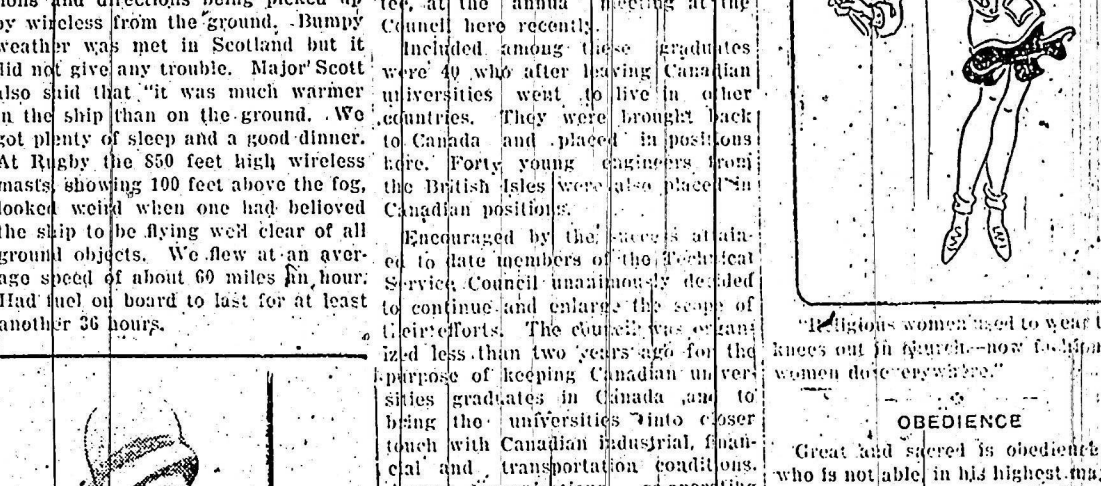

League of Nations Writer: "A 2 Percent of Population" is All Army Necessary.
A writer in an English review handles the question of the reduction of land forces in an original manner which even if it is not immediately practical expresses an ideal which is worth striving for. This student takes the stand that the long of the chief cause of war and that nations are not so much engaged in a struggle for the sake of permanent peace. He argues that all nations need a small standing army and a general strike, organized crime and a revolution would be the result. He argues that the League of Nations is the only organization that can maintain peace. He argues that the League of Nations is the only organization that can maintain peace. He argues that the League of Nations is the only organization that can maintain peace.

Many Graduates Work in Canada

Technical Service Council Reports Success at Annual Meeting
Toronto.—Three hundred and forty Canadian graduates of Canadian universities were placed during the year with Canadian manufacturing concerns and other business establishments by the Technical Service Council, according to reports submitted by Halmer Nelly, vice-chairman of the Executive Committee, at the annual meeting of the Council held here recently. Included among these graduates were 40 who after leaving Canadian universities went to live in other countries. They were brought back to Canada and placed in positions here. Forty young engineers from the British Isles were also placed in Canadian positions. Encouraged by the success in placing the graduates, the Council has decided to continue and enlarge the scope of their efforts. The Council has organized less than two years ago for the purpose of keeping Canadian universities graduates in Canada and bringing the universities into closer touch with Canadian industrial, financial and transportation conditions. Among organizations cooperating with the council are those representing manufacturing, banking, transportation, mining, departmental agencies and other institutions. The council reported that many Canadian industries employed men with specialized training for the first time during the year, and that a very
