### Nurses Mix Babies

**Mother's Frantic**  
Solomon himself would have been hard put to find an equitable solution of the quandary recently found themselves: Two women gave birth at the same time and the nurses got the identification labels mixed up, so that now nobody knows which baby is which. The uncertainty seems to have upset the mothers to a far greater degree than it has affected the fathers. All sorts of scientific tests have been suggested, but all of them are fairly likely to make certain identification. In case they should find that a mistake was actually made and that each will exchange children, they will exchange them, and all will be well, they believe.

But will it? The methods of up-bringing vary in every individual household. A child brought up for a few years in one home may find that to be suddenly transferred to another means all the difference in the world between happiness and a vague discomfort not to be translated into words. Moreover, surely during the intervening years the respective mothers will have grown so fond of the children that they will not want to make any change, no matter what the scientific tests develop. This matter of mixing baby identification tags is getting serious. Some other method must be adopted. A rubber stamp, with the name and the doctor's signature affixed, would perhaps hold a whole lot longer as the wrong baby was not stamped.

### CABIN CLASS TO EUROPE

By the Famous Sister Ships  
**ATHENS LETITIA**

Take advantage of this new revised rate to Liverpool, Belfast and Glasgow, in these great Scottish ships. Rebate of 12% on round trip Cabin Class bookings during the ten off-peak months. Tourist Third Cabin rates have also been adjusted. Weekly sailings, in conjunction with Canada to England, Ireland and Scotland.

Book through the Cunard Line,  
Corner of Bay and Wellington,  
Toronto, Ont. Tel. Elgin  
370, or any steamship agent.

### A Drowning Person Is Crazy - Be Firm

Don't try to rescue a drowning man unless you are a good swimmer yourself.

Remember, a drowning person is generally insane for the time being, and is liable to drag you to your death, unless you are capable of swimming with a heavy load.

The advice is that of Frank E. Dalton, a swimming teacher, and son of a famous English Channel swimmer. He gives it in "Swimming Scientifically Taught".

Counsel on rescue for drowning is timely just now. Among the many bits of advice given by Mr. Dalton are the following:

Of the many different ways of saving life, the safest and best method is to swim near the person as possible, then dive under and come up behind him; otherwise he is liable to grab you around the neck with a death clutch from which it is extremely difficult to escape.

When swimming up behind the person, grab his biceps and force him on his back; the more he struggles, the more he helps himself to keep afloat.

To prevent being clutched by a drowning person, the following rules should be carefully studied. Mr. Dalton tells us, adding that "every action, however, must be prompt and decisive, otherwise this method will be of no avail."

If grasped by the wrists, turn both arms simultaneously against the drowning person, thumbs outward, and attempt to bring your arms in, right angles to your body. This will dislocate the thumbs of the drowning person, and he must let go.

If clutched around the neck, immediately take deep breath, lean well over your opponent, place the left hand in the small part of his back and draw your right arm in an upward direction until in line with his shoulder, and pass it at once over his arm; then with the thumb and forefinger catch his nose and pinch the nostrils close, at the same time place the palm of your hand on his chin and push firmly upward. This will cause him to open his mouth for breathing purposes, and, being under you, will swallow water. Choking passes, and not only is the rescuer safe, but the other's left so helpless as to be completely under control.

If clutched around the body and arms, take a deep breath, lean well over your opponent and throw the right arm in an upward direction at right angles to the body, or draw it up between your body and that of your opponent. Then with the thumb and forefinger catch the nose and pinch the nostrils close, and at the same time place the palm of the hand on the chin and bring the right knee as high as possible up between the two bodies, placing it, if possible, against the lower part of your opponent's chest; then, by means of a strong and somewhat sudden push, stretch your arms and legs out straight, at the same time throwing the whole weight of the body backward. The sudden motion will press the air out of the other's lungs, as well as push him off, no matter how tightly he may be holding. He may then be seized from behind and rescued.

### Another Air-Minded Prince

Prince George arrives with Squadron Leader Don at Radlett, England, to officiate at opening ceremony of new Hanley-Pago Aerodrome there.

### Rural Club Founded By Canadian Women

The women of Canada must have had a more ordinary interest in the International Conference of Rural Women, held a few weeks ago in Vienna, Austria. The first rural women's club to be formed anywhere in the world came into being at Stoney Creek, Ontario, over thirty years ago. It was organized for the purpose of improving the standard of life in rural districts. The movement quickly spread to other provinces and to other countries. The first convention of representatives of these rural women in Canada was held at Agricultural College, Guelph, Ontario, in 1906, in a small hall on the top floor of the Macdonald Institute Building. At the present time it requires a large hall to accommodate a convention of any one of the five districts in the province. The movement was started in the British Isles by a Canadian woman, Mrs. Alfred Watt, during the Great War, and is now well organized there. From Britain it was carried into the countries of Europe, and the first international convention was held in Belgium in 1929, with delegates from Canada, the British Isles, the United States, Australia, New Zealand, Germany, Czechoslovakia and India, and the chairman was Mrs. Watt. Women in the rural districts throughout Canada are now organized under different names, but all are the result of that first organization at Stoney Creek over thirty years ago.

### Mint for Remembrance

The smell of mint brings back to me a kitchen with its homely clutter, the whitest table one could see, a chopping-knife, and wooden platter; and somebody who lightly laid the herb in heaps and started chopping.

Though I should journey far and see wide fields to forage and grow rich in the smell of mint will ever be a memory of that old kitchen; so dear they were, those distant days, they call me back again, a vagrant from simple joys and country ways, with poignant whim most sweet and fragrant.

"Occasionally a man gets a break when he least expects it."

### Prince Flies Solo

London—The Prince of Wales, according to an announcement in a London paper, has recently made flights unaccompanied by a pilot, or any other person. The Prince's solo flights according to the Daily Telegraph have been made at Northolt Aerodrome in a "Frenk" military training plane. He did not stray far from the landing field, but during a number of short flights demonstrated marked ability in taking off and landing.

### Britain Takes Her Place in Dirigible Construction

### University Head Says Overproduction of Trained Men and Women Impossible

San Francisco.—There is no danger of overproduction of trained men and women.

This was the statement of Dr. Robert G. Spruell, in a declaration of policy on taking office as the new president of the University of California. He emphatically declared against limiting the enrollment of the institution, now considered the largest in the country.

"As far as numbers are concerned," he said, "I feel that the most important question is that the qualifications of our entrants to do adequate university work be maintained, and that the quality of work in the university be not impaired with any idea of making it possible for an increasing number of students to meet the requirements."

"Subject to these two limitations, I believe that the university should welcome those who desire to come to us. In numbers, if quality be maintained, cannot be desirable."

### Maizolith-Product of Chemical Magic

Maizolith, a substance hard as stone and stronger than most kinds of wood, is one of the newest products of chemical magic, working on cornfield wastes. Says Science Service's News Bulletin (Washington):

### East Losing Glamour-Veil And Fez Gone

One by one our treasured traditions are being taken from us, are being transformed, blotted out by the utilitarian. It is well that the poet sang, "East is East and West is West, and never the twain shall meet," added the thought that under certain circumstances "there is neither East nor West."

### Beware of Insect Bites

Insect bites sometimes have serious results, the chief danger being that of secondary blood-poisoning. Here are precautions you should take when bitten:

A little strong liquid ammonia will stop the irritation. Then the bite should be painted with tincture of iodine, which will also prevent irritation, besides destroying any germs lurking in the pores of the skin.

### Sunday School Lesson

August 10. Lesson VI.—Hannah (A Godly Mother)—1 Samuel 1: 9-16, 24-28; 2: 19. Golden Text.—M. 5: 20. And forsake not the law of thy mother.—Proverbs 4: 1.

### ANALYSIS

I. A CHILD OF HAVEN. 1: 25. II. A SON OF THIRSHANNING. 2: 1-10. III. GIVEN TO GOD. 2: 11, 18, 19: 35-1: 8.

### INTRODUCTION

In the story of Hannah we find ourselves still in the period of the Judges. The story takes place during the conflicts of those days, from wars and conquests, and from the simple and unadorned life of a country woman. Like the story of Naomi and Ruth it takes its story from the common folk of Israel, and then at Shiloh. We may say that the story that there were no nobles in the land, and that from that time very much of what was in the Bible and in the thoughts of that remarkable people. We may say that a story of the infinite possibilities of a God which are bound up in the relationship which exist between a good mother and a child. Hannah, the child of Thirshanna, was a girl of the tribe of Benjamin, educated in the palace, called to be a prophet, chosen as the wife by the king, and finally, under the influence of the Lord, the mother of a king.

### SCIENTISTS' VISION

To abolish Adam's curse, science needs a method to 40,000,000 degrees of heat energy. And it isn't as propounded sounds for a mild warmth of 100 degrees but most advantageous for the laboratory means.

Given the extra 33,000,000 and mankind may hope to factory while, for the laboratory of men must be done with the subatomic agent, in a "teacupful" of substance.

Such are some of the practical questions with which the World Conference in Berlin was occupied the other day by that physicist Stanley Edlington, "Genius of Astrophysics," and professor of physics at Cambridge University.

"The answer to that," he said, "is to use a temperature of 40,000 degrees." But the poor old universe is probably dying according to the "authority." In fact, it is becoming the general, cosmic, book-keeping, that these illimitable voids of power are awaiting the key.

Why has he not been able to look in a temperature of 40,000 degrees is explained in the York Evening Post. Sir Arthur quoted thus:

### Washing Chiffon

Many women are afraid of chiffon in wearing apparel, as they are often disappointed after washing. Wash chiffon in tepid water, 55 degrees. Do not use soap. Wash it two or three times, according to length, then tack it together—long stitches and with a fine lotion. Do not wring or rub, and wash warm water, each with constant rubbing. Rinse on the wrong side with a thin cloth. Let the chiffon and the lining cloth, if desired, stiffen with gum water.
