When the Continents of the World Slid and Shoved Around

Astronomical Observation Indicate that Greenland is Drifting Westward at the Rate of Sixty Feet Per Year

[illegible] a map and observe the east coast of South America and the west coast of Africa.

You could nestle it [illegible] so nicely.

There is a good reason governing the exact and other necessary geological facts. They were once actually [illegible] one continental mass, and were pulled apart by the primitive continent. This we know, but if continental [illegible] a explained in an article published by W. J. Peyton in the New York Times Magazine.

Over the world has continually [illegible] the maps have [illegible]

We see the great mountain ranges [illegible] have [illegible]

These questions were provided generously with endless theories.

[illegible] deep on the subject many [illegible] the earth cooling and shrinking, and [illegible] attraction [illegible] which [illegible] becomes wrinkled [illegible]

[illegible] the [illegible] the [illegible] mountain ranges [illegible] and [illegible] the earth [illegible] [illegible] [illegible]
