Mysterious Masquerade By J. R. WILMOT

SYNOPSIS.

At a London dance club Relly Carstairs, a pretity unemployed secretary, meets Roger Barling who promises to get her a job. The following morning Melly is stopped by a policeman who takes her to the police station, showing her a newspaper cutting announcing that a Melly Carstairs is missing from her home. At the police station for home, at the police station and the station of the profess to the profess of the pr

CHAPTER VIL-(Cont'd.)

Molly was thinking furiously. She ad not wholly enticipated that she would be kept a prisener, but she saw now that it would be utterly useless protesting about this unexpected curtailment of her individual liberty. These people were clever—yes, they were playing that lost memory card for all it was worth, and the wors! of it was that she could do nothing—absolutely nothing. She had seen that from the moment the police superinendent accepted the Silver's word for it that she was their missing niece If she fought against this unjust deree and threatened to communicate with the police, they could always of memory and stress the danger of her going out alone.

It was a situation that had, so far,

not occurred to her and she began to be unemployed in Chelsea in posses sion of her liberty, than living in the lap of luxury here without it.

As they walked slowly back to the

nouse Molly threw cautious glance over her shoulder to the open gateway behind her. There was now no sign of the man Rogers who had waylaid her, and it occurred to her that she might be able to twist herself free from Silver's light touch on her arm and make a dash for freedom. But Molly was determined not to do anything precipitate. She had al-ready decided to stay on with these people to discover just what their particular game was, and running away would not help her. In fact, if there was anything ultra-queer about the business, it might even mean a greater curtailment of her freedom and that was what she particularly wanted to avoid. So Molly decided to accept the situation for what it was

Back at the house once more, they were met by Flor. Silver whose blue eyes were even more widely incredulous than her husband's had been out aiming especially at any onewhen Molly had seen him panting to-

wards her across the lawn.
"My dear," she exclaimed, in shocked accents, "surely you weren't going

out—alone?"

Molly nodded and smiled. "That's just what I had contemplated," she said. "And I can't see anything particularly wrong in it. I only wanted to go down to Chelsea to explain things to Mrs. Dawlish."

"Mrs. Dawlish! Who is she, my dear?" out-alone?"

"My late landlady," Molly explained. "I can't see any objection in that. After all when I went out yesterday morning I didn't say anything about not coming back, you know."

"I explained everything, Molly," bring;
Who has not known the warmth of love can know
No chill of graying embers perish
The nappiness a life of love can bring; broke in Paul Silver, quickly. "I explained just how we had found you again and I paid her very well—yes, very well indeed for all that she had done for you. Mrs. Dawlish certainly

you."
Molly bit her lip, perplexed. Paul Silver seemed to have thought of everything, she told herself, and what was more, he evidently had no intention of her ever going back to Chel-

day, When lips that sought your own shall seek no more, When eyes you learned to love will look away, "Certainly Molly your earned to love will contain the sought your own will look away, "Certainly Molly you can all you had seen alarm. "Why no, dear. Of course not. I'm all for you to worry over. If you had seen alarm. "Why no, dear. Of course not. I'm warked banding. Besides, the relies of animal life brought up suggest wide variations in temperature and right soon."

So it was left at that, for the first guests had begin to arrive the life brought up suggest wide variations in temperature and pressure in times past.

Strata of the kind that Defeated the life brought up suggest wide variations in temperature and pressure in times past.

Strata of the kind that Defeated the life brought up suggest wide variations in temperature and pressure in times past.

Strata of the kind that Defeated the life brought up suggest wide variations in temperature and pressure in times past. sea again.

"Certainly. Molly, you can always lake the car and go with your aunt." out a door
Whose closing falls like stone upon
the mind

"Thank you," murmured Molly, as
she ran lightly up the broad staircase. "I'll try and remember that."

-CHAPTER VIII.

Later that same afternoon while of Molly was reading in the lounge, p. Flora Silver came into the room.

"I've just bought a new frock for a you. Molly deer," she announced. "I'd state of the state of

ou like it. The girl's eyes sparkled. Mention of a new dress had broken down a Hannah—"It must have been—to the great many barriers that seemed

"Where is it?" asked Molly, excitedly, "and what is it for?"

For answer Mrs. Silver took her by the arm and led the way to her bou-

Hanging frem a hook Molly saw wonderful an evening gown as she had ever seen. It was fashioned from a pale green material-a shade that she had always admired.

"Is that really for me?" she ex claimed. "How wonderful."

A moment later Molly was surveying herself in the tall cheval glass. The gown fitted her perfectly and she was conscious, too, that it enhanced her beauty as it had every right to do. "But where are we going?" asked Molly. "Is it a party or a theatre?"

Flora Silver was beaming in ol yous satisfaction on the grid. It was your satisfaction on the grid. It was tenarkable what effect a new frock had on most women a tonic effect that effaced all doubt for the time

eing.
"A few friends are coming in to night," -she vouchsafed casually enough. "I am sure you will make

enough. "I am suite you "no yourself very nice to them."

"Why, of course," Molly agreed.
"But do—do I really know them." A sunden doubt had assailed her. This

assumed lost memory of hers might plove rather awkward, she was think-

"Most of them will know about you dear. They will have heard your uncle and I mentic, about you wille

"Paris?" There was a sudden note of alarm in Molly's voice. "But I've never been to Paris. What do you

mean Flora Silver preserved her police marrelously well.

marvelously well.

"I know it's going to be difficult, my dear—I mean your not remembering, but I think our friends will make due allowance for that. I do wish that old memory of yours would come back. It would make thines so much back. It would make things so much

For the moment the subtic charm of the rew evening foun was completely forgetten for Molly. She was and once again with this recurring problem. Did the Silvers really believe she was their missing niece, or was all this just a continuation of their pose? Molly quickly foresaw a great many complications if the Silvers insisted on her meeting people as Mrs. Silver suggested. It was going to be hard to appear natural and at the me time simulate a lack of knowledge of essential things that had hap ed in the past.

"Certainly I shall do my best to be ot occurred to her and she began to the conder whether it was not better to unemployed in Chelsea in possese unemployed in Chelsea in possese unemployed in Chelsea in posses inquisitive. That might be awkward, on't you think?"

"You can rely on their discretion," countered Flora Silver, expansively. That night Molly was soon to learn omething rather more vital about the

Silver menage.

The house looked artistically com fortable with the curtains pulled close across the tall windows, and with the softly-shaded electric lamps glowing in the downstairs rooms. Flora Silver, gowned expensively and looking the pictive of aniability fussed around for a few moments and fussed around for a few moments and then went in search of Molly. "Now, my dear," she began as they descended the stairs, "I want you to realize that you can do exactly what

ou want to do tonight. If you wish to play cards or souldito all well and good. If you feel more like chatting to our guests...well, my dear; you'll itself.

A hint of suspicion had crept into Molly Carstairs' mind, and size felt the time, the bigger the bloch of black the superscript of the choride is reduced.

that she stood on the brink of an im portant discovery.

"Do you hold these parties often?"
she asked, innocently enough.

"Sometimes once, sometimes twice a

week," Mrs. Silver told her. The words were uttered so naturaly that, or the moment Flora Silver had been

This process of building up a complete picture of the Silvers was strangely slow. With their persistling in the pretence that she had lost lief memory, her task was rendered all the more difficult, but she was nevertheless, convinced that it would not be long before she had more than

an inkling of the truth.

"I am afraid it must make me appear abysmally stupid," sighed Molly pear abysmally stupid," sighed Molly "Illows Cilver covertly. "I watching Flora Silver covertly. "I must be a great trial to you, musn't

Auntie Flo?" Flora Silver's face relaxed suddeninto a smile where a moment before

ed as Miss Molly, "our niece who has just come over from Paris," where, Molly gathered, she had been staying with friends after having been to chool there.

The guests were a somewhat mixed lot. At least that was Molly's impression. Neither did it appear to her that they were "local." They were a trifle too fashionable for Hampstand. They expend were of that stead. They savored more of that like you to try it on new to see how strata of town society which has, by reasons of birth rather than financial considerations, no entree into May-fair and Knightsbridge. Most of the women were florid, over-dressed and had obviously been raised in their station as a result of their husband's successful trading operations. Molly had heard of the type before, but this was the first opportunity she had had of encountering it at close range. (To be continued.)

Artists Show Works From Clotheslines

Notes

When he invented his steam engine James Watts also invented the fac-tory, the mill-town and the slum. Coal became energy which could be applied to make cheap goods. Industrial communities sprang up around coal mine or along navigable streams that flow ca near ccal mines. Huddled house presented problems that only the sani tary engineer could solve problems involving chiefly the supply of pure drinking water and the disposal of sewage. Both problems are related. Without sanitary sewage disposal there can be no acceptable supply of

The first sewers were simply coanected with streams, with results that may be imagined. Settling tanks were then introduced which permitted the more readily removable solids to set-tle. But the fine matter held in susp asion was still a menace. So the sewage-farm came into being—a large tract of land over which sewage flowed and by which it was clarified as it filtered through the ground. As towns grew and land rose in value it lecame necessary to resort to more fying means. Bacteria beds were in roduced and then settling tanks. And vated sludge process which requires a still smaller area, partly because two storey tanks are employed.

In the process of bacterially digest-ing sludge, gas is generated, which consists of methane, carbon dioxid (the kind with which beer is charged) and nitrogen. So much higher in heating value is this gas than that supplied by the city plants that comnunities now collect it, use it either for heating or for generating energy in their own internal cambustion engines, or sell it. In one Berlin plan alone 194,000 cubic feet of gas are col lected in twenty-four hours. CHEMISTRY VS. FORGERY.

Give Dr. Siegfried Turkel of th Viennese police laboratories a cheque which bears a forged signature or which has been "raised" in amount and he will tell you in a few hours, "Five hundred was changed to rea five thousand dollars ten days ago. Or, "The signature was forged not

later than this week.

How does he know By a simple caloride test of his own. There ere bundreds of chlorides, the best known of which is sodium chloride, or common table salt. All inks contain chlorides of some kind. Change the cheque will speak eloquently for

iter to which the chloride is reduced by Dr. Turkel's method. Freshly biotted ink will have sharp silver edges A signature a day old will be broader than it was when written. In half s week writing is slightly fuzzy and in ten days decidedly so. In two months the loops in "e's" and "a's" are filled. taken completely off her guard and A cheque a year or more old become she stood staring at the girl in con-A cheque a year or more old become sne stood staring at the girl in con-fused bewilderment.

Then the elder woman laughed,
Awkwardly, Molly thought. "My dear
you've no idea how awkward it is to
have to keep reminding myself that
you can't remember. By the way,

more vanid is the process of preceding you can't remember. By the way, more rapid is the process of spreading perhaps tonight your memory will and re-crystallization. For this reaome back. I do hope it will, dear." son Dr. Turkel would also like to know But Molly had achieved her point the humidity of the place where the forged or raised cheque was kept be-fore he ventures to assert just how many days ago it was tampered with

BORING IN OCEAN DEPTHS. Years ago the late Sir John Mur ay, famous for his work in ocean agraphy, remarked that if it were ossible to drill a core of only 500 feet out of the bottom of the ocean we would have a record of almost all geologic time. In the light of some work done by Professor J. A. Cushman, this hypothesis seems to be true. Modest ocean-bottom cores of his, measuring only two and a half feet mere mud of deep soundings—show a marked banding. Besides, the relics

dently formed very slowly. Ocean-ographers who dredge the sea bottom specimens bring-up hundreds of Professor Alfred C. Lane College to suggest years ago that a hole ought to be drilled in the bottom of the sea just to learn more about geological time, and hence about the earth's earlier stages.

Now that oil-well companies think nothing of boring down 10,000 feet, his suggestion looks more practical than ever. In fact, Dr. C. S. Piggot of the National Academy's com for determining the age of the earth, has designed just such a machine. All that geology now needs is some mil-l'onaire to build it and some resourceful engineer to take a sample of the ocean's bottom, which will probably reveal as much about the geological past as the great mountain ranges which were pushed up when the earth

DETERMINATION OF SEX. About thirty years ago it was dis-overed that sex is determined by the male cells and this because the cells are of two different sizes. One size gives rise to female and the other to ale offspring. New political and social possibilities were envisioned. Bilogists began to discuss ways of separating the two sorts and thus settling before hand whether children should be boys or girls. Soviet science, which is particularly

active and daring in biological experi-mentation, has announced that the two kinds of male cells have at last een separated. In animals, at least, it is now possible to determine exactly what the sex of progeny will be. So aid Professor Julian Huxley recently in an address that he delivered in London. But cautious biologist that he is, he wants confirmation before he believes it.

This Week's Science there are still in use the London district hearth or bedside mats centred with designs of this man's making."

1933 Pyjamas

Here's a delightful new pyjama model in jumper effect that links it definitely with 1933.

It's stunning in navy blue and white crepe silk print as its inspirator. The guimpe is plain white crepe. Don't you think the big puffed sleeves and ied collar effective?

It's a model too that gives the figure graceful slimness. It would be darling in grey linen

with a yellow organdie blouse Style No. 3445 is designed for size 14, 16, 18, 20 years, 36, 38 and 40 Size 16 requires 3½ yards of 39-inch material for pyjamas with 1¾ yards of 39-inch material for blouse.
