Before the advent of the motor car and Hydro in Ontario, the farmer was truly "the forgotten man". The days were long—the nights longer and lonelier . . . farm labor was arduous . . . the housework drudgery . . . the young people waited their chance to get to the city.

Few realize how much Hydro has changed rural life in Ontario. Its coming brought every advantage enjoyed by city homes. Hydro lights the home and barn—pumps the water—washes the clothes—cooks the food—brings the world's best entertainment into the parlor. Today, the farmer has within his grasp the opportunity to make his home equal to the most modern city home—to operate his farm with the most modern labor-saving equipment.

Fully realizing that the greatest single contribution it could make to a better, more enjoyable life, and a more permanent prosperity to Ontario, would be to electrify every rural home in the Province, the present Hydro has left no stone unturned to extend the benefits of low cost power to Rural Ontario.

During the present fiscal year, Hydro will spend approximately four million dollars building over 2,000 miles of new line to serve approximately 10,000 new rural customers. At August 15th, 1937, over 1,500 miles had been built, and more than 7,500 new customers added.

Service charges have always retarded Hydro growth. Realizing this, the present Commission cut these rates in half in November 1936. Hundreds of rural users immediately applied this saving on new appliances for the home or for labor saving and profit making electrical equipment on the farm.

In addition to this reduction in the service charge, the basic cost of power was reduced in some systems by \$2.50 per k. p. On August 1st, a further reduction was made of \$3.00 per h. p. in Eastern Ontario, and \$2.00 per h. p. in the Niagara System. The effect of these reductions will ultimately be felt in reduced consumption charges all over the Province.

Certainly Rural Ontario has gained as much, if not more, than any other section of the Province by the success of the present Hydro in cutting power costs and extending the benefits of low-cost power. There is no "forgotten man" in the Hydro policy of today.
