

Sunday School Lesson

FOLLOWING VISION WITH SERVICE-Mark 9:14-29 Golden Text.—All things are pos-sible to him that believeth. Mark 9:

THE LESSON IN ITS SETTING

Time.—Autumn, A.D. 29.
Tlace.—At the foot of the mountain on which the transfiguration of Christ tock place, and therefore probably on the right at the foot of

1d. And when they came. That is, when the Lord Jesus, with his three disciples, Peter, James, and John, returning from their rapturous experience on the near-by mountain where Joses was transfigured, came back to the plain from which they had departed for the mountain. To the disciples. That is, to the nine disciples whom Jesus had left behind when he ascended the mount. They saw. "They," refers to Jesus and the three disciples with him. A great multitude about them, and scribes questioning with them. Both of the pronouns "them" refers to the nine disciples. As we shall soon see, the disciples had failed in their attempt to cart the demon out of a roor boy who had been I wish to them, and the soules were taking adventure of their tradic failure to accuse them of imposture and an inability to accomplish the things which they boasted cf.

15. And straightway all the multi-tude, when they saw him, were greatly amazed, and running to him salut The multitude were amazed because they had not expected Jesus at this time. He was the one person that they wanted to see, especially because of the heated argument that had arisen. He came down on the lake when his disciples were envel-oped in the storm of wind.

Questioning Multitude 16. And he asked them, What question ye with them? The question was probably put both to the scribes and to the multitude in general. Here undoubtedly the question of Jesus was one asked sincerely, to secure information, asked because Jesus did not choose to exercise his divine omniscience on this occasion.

17. And one of the multitude ans-wered him, Teacher, I brought unto thee my son, who hath a dumb spirit. From this verse we gather that the father of this wretched boy had heard that Jesus was near by; but the Lord had come up on to the mountain with his three disciples to be transfigured, and the father determined to do the next best thing, i.e., to ask the disciples of Jesus to heal his boy. This spirit was a power too great for the boy to escape from by his own deter-mination, and a power which no other man was able to drive out from

18. And wheresoever it taketh him, it dasheth him down; and he foameth, and grivdeth his teeth, and pineth away. The words here de-scribe the condition of this boy under the power of the demon. And I spake to thy disciples that they should cast it out; and they were not able. The disciples had lost the power which they once had to deliver men from the bondage from which the Lord Jesus came to set men free

The Crowd Accused And he answereth them and saith, O faithless generation, how long shall I be with you? how long shall I bear with you? bring him unto me. These words were addressed (1) to the father, (2) to the dis ciples, (3) to the crowd, and (4) through them to the whole people It was faith that the Lord Jesus sought in the hearts of men, and he did everything any one could do to secure such faith; when faith did not follow his miracles and matchless teaching, the Lord was grieved to the depths of his heart.

20. And they brought him unto him: and when he saw him, straightaway the spirit tare him grievously and he fell on the ground, and wallowed foaming. Here before the very eyes of Jesus the whole affliction of the boy appeared.

21. And he asked his father, How long time is it since this hath come unto him? And he said, From child. There are many ailments, handicaps, and reculiar twists that many men can say they have had "from a child." If "from a child." we know boys and girls to bear such terrible afflictions and weaknesses, how important it is that "from a child" young people should be brought to know the Lord Jesus Christ! The possibilities for great good in children are just as good as the possibilities for great evil.

22. And oft-times it hath cast him

both into the fire and into the waters, to destroy him: but if thou canst do anything have compassion on us, and help us. Notice the double occurren e of the pronoun "us." The father made himself one with the child. The sufferings of his son were his sufferings. Yet people say that atonement through substitutio unnatural and illogical. If earthly fathers feel so, how must our Father who is in heaven yearn over his children, a prey to "possession" and daily when under the control of sin sent into terrible dangers and temp-

Hand of Faith 23. And Jesus said unto him, If thou canst! All things are possible to him that believeth. The father's faith had not been very strong to begin with, and the failure of the disciples had made it weaker. What Jesus really told this man was that it was not a question of his (Jesus')

24. Straightaway the father of the child cried out, and said, I believe; help thou mine unbelief. He wished to believe, but felt unbelief still too strong within him. He presents him-self to the Lord just as he is.

25. And when Jesus saw that multitude came running together, he rebuked the unclean spirit, saying unto him, Thou dumb and deaf spirit, I command thee, come out of him

and enter no more into him.
26. And having cried out, and torn him much, he came out: and the boy became as one dead; insomuch tha the more part said. He is dead. What is often feared most in a major operation is what is called "shock When a power that has dominated a life is removed, it is natural tha there should be a convulsive experi ence in the readjustment of that life to new conditions and to the loss of that which previously had been a veritable part of that life. Here there was more than a power, an actua Satanic, personal dominion over this

27. But Jesus took him by the hand end raised him up; and he arose Jesus did not here, as it were, pick up a limp body. The cure was immediate, and complete, and so definite that no one could doubt the reality of it. Jesus was not only intereste in casting out this demon, but he had an infinite compassion for the boy himself, and waited until the boy was on his feet and restored to nor maley again.

Why They Couldn't Act 28. And when he was come the house, his disciples asked him privately, how is it that we could not cast it out? They were ashamed and perplexed and bewildered at their own impotency, because they knew that once they had had power to cast out demons, and they knew also that they ought to have had power to do so that day. Such humiliating experiences are wholesome for every Christian worker. Times of impotency and failure are used by God for a

29. And he said unto him, This kind can come out by nothing, save by prayer. These mightier spirit require the full measure of faith to dislodge. The disciples did not think of prayer. They let their faith droop. and thus failed. Depression laid hold of them, and in consequence they neglected what they then needed most prayer; and so their faith failed and they were left without power. Pray erlessness always results in lowered spiritual vitality, and that in turn brings failure.

The feathers of the touraco are not waterproof; the colors wash of

Miss England To Wed

Muriel Oxford, "Miss Great Britain in 1936, will marry Gilbert A. Evans a London stock broker. Miss Oxford figured in the disappearance of Frank Vosper at sea, last year, when he van ished from a party she gave.

IS THIS YOUR BIRTHDAY?

By A. R. WEIR

What the Stars Foretell for Those Born on April 29 and 30th and May 1, 2, 3, 4 and 5

bove your Zodiac sign is Taurus. This sign is of the Earthy Triplicity and it gives your great practicality, a strong will and fixed determination. You are self-possessed, have decided views and

great powers of perserverance.

While you have influential friends ou should beware of open enemies who will attempt to cause trouble for you. Your children will be a source of great happiness to you. Your lucky number is six. An unexpected business

change for the better is indicated.

For complete birthday horoscope for any birth date in the year, send 10c to A. R. Weir, 73 Adelaide St., W., Toronto. Please print your name and ad-

Tombstone Laid To Appease Ghost

Victim of Murder 200 Years Ago Said to Haunt Premises

To appease the ghost of a sailo at Portsmouth, Eng., ever sirce he zbility to cast out this demon, but was murdered 200 years ago, a tomb the real issue was whether the man stone has been erected over his grave had faith enough to believe that in the inn's courtyard.

Jesus could do it.

According to legend the sailor a

When Jesus said that "all things rived at the inn one night early in are possible to him that believeth," the 18th century and was killed by a he meant that everything which we stranger, who robbed him of a hag of have a right to expect from God, ac- jewels and money. The landlady and cording to the teachings of the New her son, fearing that the crime would Testament, we shall receive from the damage the name of the inu, dragged Lord, if we have faith to believe in the body into the corrigard and bur him who has made these promites. Whitefaced Sallor

A traveller w', slept in the room where the murder occurred a few days later complained that he had seen a "whitefar id sailor, with bloo on his face".

For generations the inn retained its reputation of being haunted, and even after a new building was erected the sailor was said to haunt the corridors

The present landlady hopes that the new tombstone will appease the shost.

Second Great War Now In Progress

Began When Italy Gave Aid To Franco, Is Famous Soldier's

LONDON.-The second great was of the 20th century began in July, 1936, according to Capt. Basil Liddell Hart, historian and expert on

military matters. Captain Liddell Hart, who is military correspondent of the London Times, told the University College Union Society in London that the first operations of the war came when Italy with aircraft gave "direct assistance" to the Spanish insurgents and Germany with warships gave "indirect assistance," helping transport roops from Africa to Spain.

Preceding the war, he said, encoun agement and experience had beer gained by Japan in Manchuria and Italy in Ethiopia in defying the League of Nations and developing the new technique of camouflaged

"The situation in this new grea war' now would seem to be that the enemy is within reach of gaining the decisive points without a battle, and in the most vital direction we have made no serious attempt to pro vent him," said Captain Liddell Hart

Butterfly's Flight Well Controlled

It Is In Some Ways Superior To That Of A Bird

Rutterflies are such light, fragilreatures that one would suppos them to be largely at the mercy of the winds in flying. Their wavering, seemingly erratic flight, even on still days, suggests this. But, writes Sir W. Beach Thomas in the Atlantic Monthly for January, "Their flight is now known to be much more under control than seemed likely. Large flocks of butterflies have been seen tacking their way against strong winds over the sea as both immigrants and emigrants." Further, the author tells us, the flight of butterlies is in some respects superior to that of birds. As an instance he cites the huge light blue butterflies of the Brazilian forests and the purple emperor butterflies of France and Great Britain which have the power of rising into the air almost vertical-ly "with an ease and at a speed that are scarcely credible." These capable ers and their dependents receiving aid peronauts seem to be the gyroplanes while Ontario had only 5,773 in this of the insect world.

Sideways and Backwards Insects have several tricks of flight which other flying creatures and heavier-than-air flying machines are incapable. For example, many species, including dragon flies, have the ability to go into reverse gear and fly directly backward without change ing their bodily position. In addition to this, they can fly sidewise. either to the right or left, at right angles to the axis of their body. Many of the smaller insects, including bees and flies, can hold their own with the larger dragon flies in reverse or lateral flying.

Bible Facts

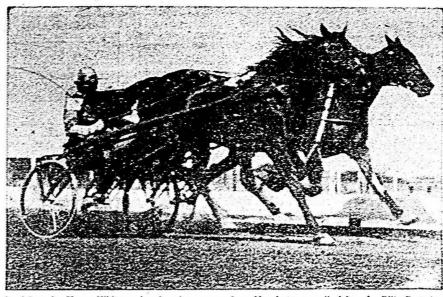

All book-lovers read the Bible for the beautiful, dignified English it contains, if for no deeper reason. Men who have made a very careful analysis of the Bible say that it contain 3,565,480 letters, \$10,697 words, 31,175 verses, 1,189 chapters, and 66 books The word "and" occurs no fewer than 46,627 times and the word "Lord" 1, 588 times.

Those who order their lives by the Bible could not choose a better set of practical instructions. The Book of Proverbs contains the sanest advice on behaviour ever given to man. In the earlier books there are rules for eating and drinking, for sowing crops nd the maintenan. of bodily health.

Historically, it is accurate; it con tains a comprehensive list of the flora and fauna of Palestine and the sur rounding countries, their merchandise and mineral products, and in many books, chiefly Revelation, are prophe cies which look as if they were com ing to pass today.

large boulders scattered about Britain, and now known to have been lett by glaciers, were thought to have been washed in by 'he big Biblical flood.

They Dash To A Close Finish at South Carolina Track

Age Is Leading Reason For Lack Of Employment

Survey By Carada's National Em- Plague Declines ployment Commission Shows Chronic Disease Takes Second Place In List of Unemploy-ment Causes—Construction Industry Hardest Hit.

While employment figures were much brighter for the years 1937 and 1936 than in the previous two years the statistical reports compiled by the National Employment Commission published in backlet form, reveal that the majority of heads of families un-employed in 1937 have not been continuously self-supporting for a 12-

Of 99,561 heads of families in Can ada unemployed in September of last year more than 13,500 were not employed for that period since 1933, 16,600 since 1932, 14,300 since 1931 and 600 since 1932, 14,300 since 1931 and ishing a mysterious scourge which 17,411 since 1930 or earlier. And of has killed millions throughout the he 99.561 only 1.734 were never selfdependent. The same proportion holds od for Ontario.

A table of the causes of unemploy ability reveals that age is the leading cause for men and broken homes the eading cause for women. For men disease takes second place and physical defect third place as the cause of unemployability. For women age is second cause, chronic disease third and physical defect fourth. Addiction to drugs or alcohol is a minor cause for both men and women, only 16 heads of families in the whole Do- year 68,000 were struck down. minion being listed under this cause

Employable persons, however, enjoyed some measure of employmen in 1936 and 1937, as approximately one-third of them last had work in either of those two years.

The age group of the largest num ber of employable persons is that be ween 26 and 45 years, while the age group of the largest number of unen ployable persons is from 46 to 65 years.

A comparative table of unemployed in Ontario cities in September, 1937 reveals as follows: Stratford, 781 Woodstock, 193; St. Thomas, 356; Owen Sound, 175; Sarnia, 154; Niag ara Falls, 1,421; Oshawa, 1,970; London, 3,360; Kitchener, 916; Guelph 1,161; Galt, 326; Chatham, 269; Bran ford, 2,957.

Counting agricultural aid the total number of persons receiving relief in Canada in September, 1937, was 754, 839, of which the Province of Sas katchewan accounted for while Ontario had only about half that number, 156,692. But of the Saskatche wan total there were 269,601 farm category. Construction Hit Hard

A table setting out the normal occupation of relief recipients in the Dominion reveals that the construc tion industry has been hardest his There were 18,893 fully employable persons in this category. Next was manufacturing with 15,224, then gen eral labor, 11,880, and trade, 10,323. For Ontario the order differen

slightly but construction was still in the lead with 8.974, manufacturing next with 4,738; general labor, 4,042; trade, 3.439. Primary industries such as logging, farming, fishing and min ing played only a small part in thes tables, with a total of \$,073 for the whole Dominion. This is exclusive of special aid to resident farmers such as those in the prairies.

Soya Bean Crop Has Many Uses

The multitude of uses of the soys bean, both as a food and for the production of plastics, was demon-strated to members of the Canadian Railway Club last week, meeting in Montreal. A score of articles used in the manufacture of automobiles and samples of bread, coffee substi tute, milk, sauces, flour and other food products were exhibited, an the members took away handfuls of beans to plant in their gardens.

The lecture was given by G. R Russell, who emphasized that there was a market for this product in Canada, as the country now importe 1,355,632 pounds of soya beans, and there was no reason why they should not be more largely grown. The growing of the bean restored large quantities of nitrogen to the soil and t was the intention of the Dominion Government to establish soya bean plots in various parts of the country to demonstrate that they could be grown in any soil, and be a valuable addition to farm products.

Throughout China

And Disappears Gradually From Rest of the World—Scientists At a Loss For Emplanation.

Plague is vanishing from the world and scientists are at a loss to under

stand why. The British Colonial Office, repor ing that for seven years no cases of plague have been found in Hongkong says: "The disappearance of plague not only from Hongkong, but from cline throughout the world, is due to factors which are not understood."

With the decline of plague is van

minutes' journey by aeroplane. Stationary Battleship shipping to the Indies as effectively as a mountain dumped in the middle of world. The first known plague was in North Africa. In the sixth century, all Franco-British shipping. Europe experienced its first visitation nearly 7,000 — mainly a peasant class who have up to now tended their

The Black Death One of the most famous-or notor ious-plagues in history was the Black Death which, in the fourteenth cen tury, swept Europe and in England quarters of the population. In all 25 million people died. In 1664-65 came the Great Plague of London. The population of London at that time was less than a half a million—and in one

As time passed the plague becam less and less common in the West and finally disappeared from Europe, mov ing to the East. An outbreak in India between 1897 and 1906 killed over ,000,000 people.

The plague is believed to be cause by rat fleas, and constant vigilance is maintained in all ports. Hundreds of dead rats are examined every year.

How Brains Work

Sleuths of the Mind Are Making Studies and Experiments To Find Out

Why is one man brilliant and an ther, with equal chances and environment, mentally defective? The Burden Mental Trust, under the auspices of the British Medical Association has undertaken to investigate the problem. Its chief aim is to discover why one brain does the work of ar Einstein while another is subnormal Already numerous studies and experiments have been made on 3,400 hool children in the Bath and up to October, 1937, there has been collected : : well the brains of 123 defectives and \$2 normals. Pro-fessor S. E. Whitnall, of Bristol University, intends carrying out an in vestigation on the calcarine and vis ual areas of these specimens.

Outwardly the Same

In the majority of cases, the brain of the imbecile and that of the genius is outwardly the same. But many criminals who appear normal have diseased brains. It was discovered at ter his death, for instance, that A. W. Waite, a brilliant dentist, had a slight meningitis on one side of the cere-bellum, which accounted for the fact that he poisoned a number of people which scientists have not so far no-ticed, can be rectified, humanity will receive an unspeakable blessing.

Housing Loans Peak Reached

1,189,679 Given Under Dominio Act During Last Month

OTTAWA .- March was a recornonth for operations under the Do minion Housing Act when a total of \$1,189,679 was borrowed to provide ommodation for 328 families These figures were more than doubl those for March last year.

Figures were issued last week for

the fiscal year ended March 31, showing that since the act came into operation a total of \$15,022,659 has been loaned to 2,402 applicants providing houses for 3,590 family units in 170 communities.

Average loan per family unit in March was \$3,627 and the average loan since the act was proclaime now stands at \$4,184.

A queen wasp produces from 10, 000 to 20,000 offspring in a life-

Robot Invented Automatically Toots Horn Whe

Absolute Limit La Reached

Speed Control

Two inventors in Beaver Falls, Pa., advanced, this week, a robot speed control for automobiles "as a sort of electrical conscience for driv-ers who really want to obey the law." The robot flashes a red light on the dash, operates a buzzer and then honks the horn when the machine reaches the maximum speed limit. the control, or governor, operates by

centrifugal force. centrifugal force.

The inventors, William Broad and
Stephen A. Moltrup, a retired manufacturer, said a state safety campaign
inspires the "robot" and that they

hoped eventually to market it, possibly to the state motor police.

Red Warning Light

As the automobile increases its speed, the control swings wider and wider until it hits the first electrical contact causing the red warning. contact, causing the red warning light to flash.

Then comes the buzzer, following which "you have about half a minute to reduce your speed," Broad said. "If you don't, the control sets off the.

Italy's Gibraltar That's where the highway patrol comes in because if they hear the horn "they can start looking for a speeder," Broad declared. He added:

That ought to slow folks down."

Broad said the invention attaches to the drive shaft of the transmission and can be fastened to any make of machine and regulated for any speed.

Disney Still Likes Mickey Mouse Best

In Spite of the Popularity of "Snow White" and Other Cartoon Characters

Walt Disney, Mickey Mouse's papa, like an old woman who lived in a shoe. He has so many brain children he doesn't know what to do. While other film studios are cutting

out jobs and slackening production. Disney's plant employs more than 700 workers - a record number. The "help wanted" sign hangs on the door. Mickey, who made his first hit ten years ago, is still the No. 1 star. Dis-

ney says so. But Mickey was almost crowded out as the Disney family began to grow. It's strictly on his crea-tor's orders that he's making a comeback this year. Three Little Pigs Back The three little pigs, after an absence of five years, are coming back—

with the big bad wolf. This time they will use a lie detector to foil the wolf, who by now has three little wolves. Eighteen short cartoons a year is. All are in technicolor. They cost \$50-

000 each and earn about \$15,000 profit.; Mickey still has the same voice, Walt Disney's but his ears are modified, his hands and face are smaller.

New Ventures Predicted "Snow White," finished only last December after three years of work, is regarded by Disney as an experiment, which taught him how to make a better picture next time. It is expected to earn about \$7,000,000.

One long feature a year is planned. For 1938 it is "Bambi" the story of a, deer. Next year it may be "Pinocchio.

Another Disney ambition is to animate cartoons to fine music. He had Leopold Stokowski record "The Sorerer's Apprentice" recently, but the story has yet to be drawn.

"I never cared a hoot for music when I was a kid," says Disney. "But," I might have if I'd heard it in a can,

Woman Cricketer "Whistles While She Works"

Miss Marjorie Pollard, former captain of England's Women's cricket team is seen here officiating in a recent field hockey match between Stevenage and Slough ladies' teams. She is on tour as newly appointed national or ganizer to the Women's Team Games Board, organizing sport throughout England.
