CIGARETTES

(Dr. W. D. Herrström)
Speaking recently concerning the moral delinquency of youth, Judge Hulbert of the Detroit Juvenile Court said: "We find it (the cigaret) one of the most baneful influences which we have to combat in this court."

There is a definite relationship between the increase in the use of tobacco and the increase in crime. Crime has increased 85 per cent. during the past ten years. During the same period the number of cigarets smoked has increased approximately 75 per cent.

The people of the United States spend \$3,000,000,000 yearly for tobacco, or approximately \$8,000,000 daily. At ten cents a loaf, this vast amount of money would buy 80,000,000 loaves of bread each day, or three loaves of bread per day for every family in the United States.

This huge bonfire of \$0,000,000 loaves of bread daily may explain why many people in this land of plenty are going hungry.

In 1935, 133,000,000,000 cigarets were produced, this being forty-four times the number manufactured in 1902.

Laid end to end, the cigarets smoked in 1935 would extend for 6,000,000 miles. This line of cigarets would cross the American continent 2000 times. The cigarets that are smoked each year in the United States, if laid end to end and side by side would completely cover three two-lane paved highways from coast to coast.

Dr. Charles L. Barber recently said before the American Association of Medico-Physical Research:

ANNUAL MEETING

The annual meeting of Rocklyn Agricultural Society will be held in the Agricultural Hall, Rocklyn, on Friday, January 20th, 1939, at 2 o'clock p.m. Everybody welcome.
J. S. FALLS, President
J. W. CLARKE, Secretary

"A baby born of a cigaret-smoking mother is sick. It is poisoned and may die within two weeks of birth. The post-mortem shows degeneration of the liver, heart and other organs. Sixty per cent. of all babies born of mothers who are habitual cigaret smokers die before they are two years old."

Adults do not escape the harmful effects of tobacco. Mortality due to disease of the arteries has increased 663 per cent. In the past fifty years, according to Dr. Haven Emerson of Columbia University. The use of tobacco is an important factor in those statistics.

The internationally renowned Dr. William J. Mayo recently said before a group of surgeons: "Gentlemen, it is customary, as we all know, to pass around cigars after dinner; but I shall not do it. I do not approve of smoking. If you will notice, you will see that the practice is going out among the ablest surgeons, the men at the top. No surgeon can afford to smoke."

Cornelius McGillicuddy, the great baseball manager, commonly known as "Connie Mack," said, "We do everything in our power to discourage the use of cigarets among our baseball boys, knowing the great harm that tobacco has done to those in the habit of using it."

Ex-President Herbert Hoover once said, "There is no agency in the world that is so seriously affecting the health, education, efficiency, and character of boys and girls as the cigaret habit. Cigarets are a source of crime. To neglect crime at its source is a shortsighted policy, unworthy of a nation of our intelligence."

Thomas A. Edison denounced the cigaret as "producing a degeneration of the cells of the brain which is permanent and uncontrollable."

There is a shortage of skilled labor. Luther Burbank said: "The men I found unable to do the delicate work of budding invariably turned out to be smokers or drinkers. These men do the rough work of farming owing to inability to concentrate their nerve force, on the more delicate tasks."
