PROLIFIC COW

What is probably a provincial record for calf production was set up a few days ago by a purebred Shorthorn cow, belonging to Charles S. Atkinson of Anderson. About this time last year the Journal Argus announced that in the space of five years this cow had produced 10 calves. To this numerous family twins were added last week, bringing the sow's total for six years up to an even dozen.

-Peterborough Examine

Need Storage For Big Western Crop

Present crop prospects on the Canadian prairies are so good the Western farmers will have to erect additional storage on their farms for more than 200,000,000 bushels of grain, "even allowing for heavy deterioration between now and harvest," Western Retail Lumbermen's Association said in

a statement issued last week. The statement said farmers face a serious shortage of lumbe supplies for grain storage and barns to house "the steadily in-creasing livestock population," and estimated lumber requirements for grain storage alone at more than 200,000,000 feet.

THE WAR - WEEK - Commentary on Current Events

War May Last For Many Years If Asia Falls To Axis Powers

Invasion Risks

American forces need for crossing the Channel and opening a sec-ond front on the Continent. The

RAF and the American air force

in still undisclosed size now or-

ganizing at Irish and English bases probably would be able to place

an umbrella over a crossing and

even extend it inland for fifty to

a hundred miles under present conditions. But would they be able

to hold it and blast German mech-

anized forces moving up to a sec-

ond front should Nazi air powe

ond front should Nazi air power be concentrated in the West? That is the big question in Washington and London when the risks are calculated. Clearly, the

longer British-American air power is built up and the farther East the Nazis are drawn, the smaller

are the risks in the West. We trust equal attention is being giv-

en to the risks of waiting too long. To realize how important it is to keep the Russian front alive, one

only needs to try to estimate the situation with that 2,000-mile sapper of Nazi strength immobilized.

Military experts are agreed that

Japan is only waiting for the most favorable moment to give Moscow a second front.

Berlin's Nightmare We trust, too, that London and

Washington are thinking not only

tages from a second front. It has always been Berlin's nightmare. It would help not only the Rus-

sians, who undoubtedly would counterattack simultaneously if Nazi air power moved West, but the Allies in Egypt. And visible evidence of help near at hand should double and redouble the

strength of revolt and sabotage on the Continent. Calculations are

necessary to avoid raising fals

hopes, or making futile sacrifices,

but wars are won by imagination.

R.A.F Raids Danzig

The magnitude of this war has been indicated in the titles given to its encounters: The Batte of France, the Battle of Britain, the couldn't hold Norway because her couldn't her couldn't hold Norway because her couldn't he couldn't hold Norway because her short-range fighter planes based in Sattle of the Atlantic. An even concept is beginning England couldn't protect her land England couldn't protect her land and sea forces there, while the Germans, with short-hop land communications could base both bombers and fighters in Norway. One secret of Dunkirk was that there the RAF controlled the air. It is well to remember that it required a week to take 335,000 men across the Channel from Dunkirk—without equipment. With improved air protection and prior organization of transport, hundreds of thousands of men with equipment could be landed in take shape: The Siege of Asia If Asia holds out the United Nations can win a clear-cut and con-clusive victory, says the New York Times. If Asia falls the United Nations will not lose the war in the sense that they will surrender to the Axis Powers: when peace is worse than any form of war, as a Hitler peace would be, there will be no surrender. But if Asia falls to the Axis war will simply become chronic, the chief occuequipment could be landed in France in a few hours. endless years. Battle of Asia It is such control that British-In the war of 1914-18 the Cen-

They still do so, though they have this war there is a huger circle, inside of which are the great land masses of Russia, China and India, containing more than a billion human beings. Rommel in Egypt, the whole Nazi Army on the Russian front, the Japanese in the Aleutian Islands and all the way down the coast and through the Islands to New Guinea, are battering at this enormous fortifica-tion. The rest of the war, no matter how widespread, is an attempt to lift the siege. The armies of the British Commonwealth and of the United States may be thought of as relieving forces. When and if the Russians and the Chinese are strong enough to make per-manent reoccupations of lost terthese advances will be

sorties in force. Our first task is to see that the Our first task is to see that the beleaguered city of Asia, with its billion inhabitants, does not fall. Our second task is to raise the siege, and in this task tanks, planes and guns sent inside the friendly lines play a part equally with the hoped-for second front Second Front

Remembering that the urging of a second front in Western Europe goes back to the summer of 1941, it is easy to understand the im-patience of the layman in Britain and America as he sees the Nazis driving close to Stalingrad. Yet we may be sure that United Nations strategy has not overlooked the importance of keeping the Russian front alive. We must hop velt will give the order for in vasion in the West before the Germans can split Russia.

Air Control Necessary Undoubtedly, according to the Christian Science Monitor, the risks of landing a British-America force in France or Norway hav been carefully calculated. One key to them is in the air, literally and figuratively. For the clearest prerequisite of any invasion attemp is an umbrella of air power. Ho

By Fred Neher

(Copyright 1830 by Fred River)

The Second World War began a Danzig, the free city on the Bal tic at the head of the Polish Corridor, on Sept. 1, 1939. Last week the war returned to Danzig when British four-motored bombers div ed through a Summer thunder storm in broad daylight to raid the city at house-top altitude. The raid—a 1,600-mile round trip—was significant of Britain's mounting air power. Of more significanc was the desperate need of the Un ited Nations that made the raid

necessary.

The British fliers over Danzig had orders to attack one targetthe submarine building yards. The mounting toll of ships sunk by submarines far away in the At lantic had made it vitally necessary for the United Nations whip the U-boat, and over the oceans from Danzig to the Gulf of Mexico a far-flung campaign was under way to that end.

There were some good signs operated freely off America's shores in the early months of the year had been driven farther to sea. Convoys had been instituted in the Caribbean and the announcement had been made tha soon they would be organized in the Gulf of Mexico. But mostly the picture remained black. There were long over-water hauks to every one of the United Nations' pattlefronts. England must be fed by sea. And the unofficial total of United Nations vessels sunk by Axis submarines since the first of the year had reached 375. One incident of the week point-

Will He Defend It This Year?

The smiling gentleman is "Slamming Sammy" Snead holding the Seagram Gold Cup he won last year at Lambton as Canadian Open Golf Champion. Last year was Snead's third victory in the open and he would like nothing better than a victory this year to tie the record of four open wins now held by Leo Diegel.

The defending champion's entry has not yet been received at local golf headquarters, and for a very good reason. Snead is in the United States Navy, and permission must be secured from his superior officers to allow him to take part in this tournament. A request for this permission has been despatched through the proper channels and it is confidently expected that Snead will tee off with the field at Mississauga on August 6th in quest of his fourth win.

win.
Since the House of Seagram Since the House of Seagram first presented the trophy in 1936, the names of some of America's outstanding golf stars have been inscribed on the parchment roll. First there was Lawson Little, then "Light Horse" Harry Cooper. Snead's victories came in 1938, 1940 and 1941, with the 1939 crown going to Harold "Jug" McSpaden who is again entered this year.

year.

Standing twenty-two inches from base to top, the Seagram Gold Cup is one of the most coveted trophies in golfdom. It rests on a massive base of onyx which

ed it all up in very human terms. In an exchange of letters Presi-dent Roosevelt and Prime Minister Churchill had arranged to curtail

the flow of individual gifts and

elief supplies from America to

Britain. There just wasn't enough

To Fly Out Wounded

By Big Transports

United States War Secretary

Henry Stimson announced that the Air Transport Command, which, since June, 1941, has de-livered more than 6,000,000 let-

ters and large quantities of sup-plies to soldiers overseas, now is

forming an organization to bring

What Science Is Doing

QUICK FREEZING A new machine that freezes foods four times as rapidly as previous methods, keeps the flavor in and provides a protective coating on the food, has been developed at the University of Texas by Professor W. R. Woolrich and Luis H. Bartlett. After detern ining why foods are damaged by slow freezing, and studying all existing commercial procedures, the two developed their method of fast freezing. Freezing is in fact so fast that surface juices freeze at once and form an ice coating that keeps them and their flavors in. After the fruits or vegetables are fully frozen and remove from the machine, they are dusted with a small amount of dextrose This changes the ice coating to a plastic material that adheres tightly to the food and preserves

WELDING MAGNESIUM Northrop Aircraft, California reported the development of a method of welding magnesium, thus making available for aircraft abundant metals known.

While magnesium has been used widely in engines, wheels and accesssories, fabricating difficulties have prevented developmen for primary construction. ent of the discovery

was made by T. H. Piper, Northrop process engineer, in an address prepared for the American Welding Society.

Piper said the method had made

possible simplified manufacturing processes "eliminating the use of processes "eliminating the use or hundreds of thousands of rivets that go into the conventional plane"—and made available to savings in time and cost which ship construction.

Says Polish Fliers Are Best Fighters

The Polish fliers with the Royal Air Force are the "outstanding fighters of the war," declared Hully Stirling of Davie, Fla., who has returned from England after fourteen months' service with the R.A.F. Ferry Command. Polish aviators with the Bomb-

target practice, Stirling asserted "Nothing satisfies them for s target but a live German. There are certain areas designated for bombing practice, but the Poles always fly right over them and head for Nazi bases on the coast of occupied Europe.

The Polish pilots in the Ferry

er Command never waste time on
