

J. H. McDonald New President of Northern Hockey

Is Elected Without Opposition—
Annual Meeting Is Called
for November 12th

J. H. McDonald, Soo man, is the new head of the Northern Ontario Hockey Association, being elected by acclamation Tuesday to succeed D. E. Sutherland of Haileybury, who has held the position for the past two years. Chas. E. Roach, Timmins man, is the new vice-president, and W.A. Thompson, North Bay, retains the secretaryship, also by acclamation.

For the Executive, three names have been submitted, Rodger Mitchell, Sudbury, and Douglas Briden, Kirkland Lake, of last year's executive, and Roy Grills, of New Liskeard. The two required will be elected at the annual session of the Association being held at North Bay, Saturday, November 12th at 10.30 a.m.

Delegates are expected from Timmins, South Porcupine, Kirkland Lake, Noranda, New Liskeard, Haileybury, Cobalt, North Bay, Sudbury, Sault Ste Marie clubs, also a representative of the Mattagami League, which is composed of Smooth Rock Falls, Kapuskasing and Cochrane, and the Hornepayne Division Senior Amateur League, comprising the territory north and west of Sudbury, Tashota, Oba, Nakina, Foley and Hornepayne. This new league formed last year, will ask for a bye into the Senior play-downs. Monteith, Chapleau and Iroquois Falls may also have a number of delegates at the meeting on Saturday.

No amendments to the constitution will be presented, but two resolutions will be up for discussion. One recommends that the agreement of affiliation with the O.H.A. be amended to permit of an N.O.H.A. appointee taking part in all play-off games with an official to be named by the O.H.A. The executive will propose that the O.H.A. be requested to sponsor a resolution to provide for increasing O.H.A. representation on the C.A.H.A. from two to three voting delegates, and that the third delegate be appointed from the N.O.H.A. Executive.

Prospects Good for Approaching Hockey Season

Towns on T. & N. O. Territory
Will Be Well Represented
in Both Series

With the annual meeting of the N.O.H.A. set for Saturday in North Bay, the situation as regards the winter sport in the T. & N.O. territory of that organization is being canvassed eagerly, and advance indications are that prospects are brighter than they have been for some years past. While it is considered unlikely that Iroquois Falls will be in a position to enter teams for the approaching season, there will be a branching out of at least two, and possibly three, Junior teams additional to those who participated in the race last year, and all of whom expect to be back in the ring again.

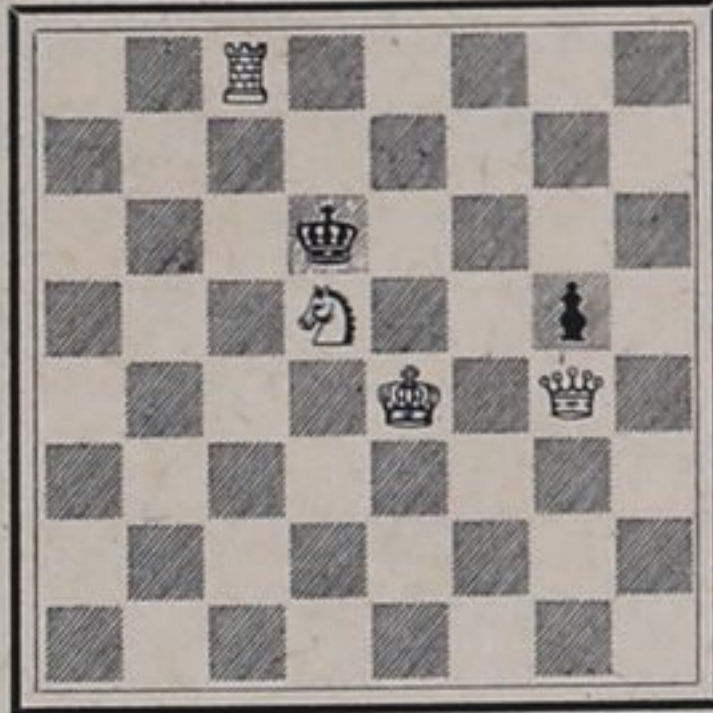

So far as the senior outlook is concerned, the Golden Group will be back, with Timmins, Kirkland Lake, Noranda and Dome ready to start again. For competition in the playdowns these teams will have the winner of the Mattagami League, composed of Smooth Rock Falls, Kapuskasing and Cochrane, and the Central group expected to operate on a town league basis, and pick a team at the end to represent the group. For this latter there may be three teams, from Cobalt, Haileybury and New Liskeard, as before, and they will play a double schedule, with the ultimate winner having the right to draw upon the rest to line up with a team.

Junior hockey should be better in this district than last year, when only five teams took part. This season, new entries are ex-

Black: K on Q3, P on K Kt4.
White to move and mate in two.
Solutions to P O Box 475, Haileybury by Nov. 24th.
Problem No. 1—Solutions will be received up to Nov. 17th.

LOCAL CHESS NEWS

The first round of the Tournament for the Championship of the Haileybury Chess Club will be played tonight in the Legion Rooms, on Browning Street. Visitors are always welcome.

The draw is as follows:

- Arnold vs. Tuke.
- Downing vs. Miller.
- MacLean vs. Hill.
- Seymour vs. Unwin.
- Farmer vs. Hincks.

Arrangements are being made for an inter-club match between Haileybury Chess Club and the Northern Chess Club, headquarters at Monteith, to take place shortly.

Radio Column

Conducted by Edgar O. Thorpe

Queries are invited and will be answered in this column

In last week's column the work of Edgar Marchant was summarized and to continue we come to the developments of Dr. Alfred Goldsmith, who was born in 1887. Dr. Goldsmith was consulting engineer for many radio corporations, among them the General Electric Co., Marconi Wireless Telegraph Co., Radio Corporation of America, and also the U. S. Dept. of Justice. His inventions in simplex and duplex radio telegraphy and telephony transmission of canal rays and precision measurements, bring him among the fore of radio experts.

In 1879 Nickolas Koomans, a Dutch radio expert was born. His experiments in the field of "self-induction in telephone lines" and his work while professor of physics at the school of the Dutch Post and Telegraph Administration brought him great prominence.

Charles Pannill, American radio pioneer, was born in Virginia in 1879. He entered the American Navy when he was 19 years of age and four years later took a post under Professor P. A. Fessenden, an eminent Canadian radio engineer. He carried out a series of tests in wireless transmission at Hampton Roads and later inaugurated wireless communication between New York and Philadelphia. Pannill was

pected from Timmins and Noranda, with every likelihood that South Porcupine also will be found in the ranks. Should the last-named centre put a team on the ice, they and Timmins and Northern Academy of Monteith, will play out a double schedule in a Northern group. The Central group, which a year ago included teams from Kirkland Lake, Cobalt, Haileybury and New Liskeard, is likely to have another member in Noranda, a newcomer to Junior hockey. The plan is to give each team eight home games arranging the schedule to permit the teams from this end of the group to visit Kirkland Lake and Noranda at week-ends, and playing in those camps on successive Fridays and Saturdays.

the first man to install wireless on the battleships of the U.S. Navy. He joined the Marconi Wireless Co. in 1912, and became wireless adviser to the United States government in 1914. Two years later he was made assistant director of Naval Communications. (To be continued.)

? Questions ?

Ques.—I have often noticed in advertisements of radio-manufacturers the term 10 kilo-cycle selectivity. Would appreciate an explanation of this.—E.B., Haileybury.

Ans. This term 10 kilo-cycle selectivity is really a misnomer, and should not be used. Its false origination came from the selectivity curve as taken by most manufacturers to explain how well their receiver separates a signal from others on adjacent frequencies. This curve is charted with five kilo-cycles on each side of the resonant frequency being the ideal. But as the chosen test frequencies of most manufacturers are 600, 1000 and 1400 kilo-cycles and as most, if not all receivers amplify more at some frequencies than others, this term is misleading. The five kilo-cycles on each side of a de-

crement point are known as side bands.

Ques. In looking over my

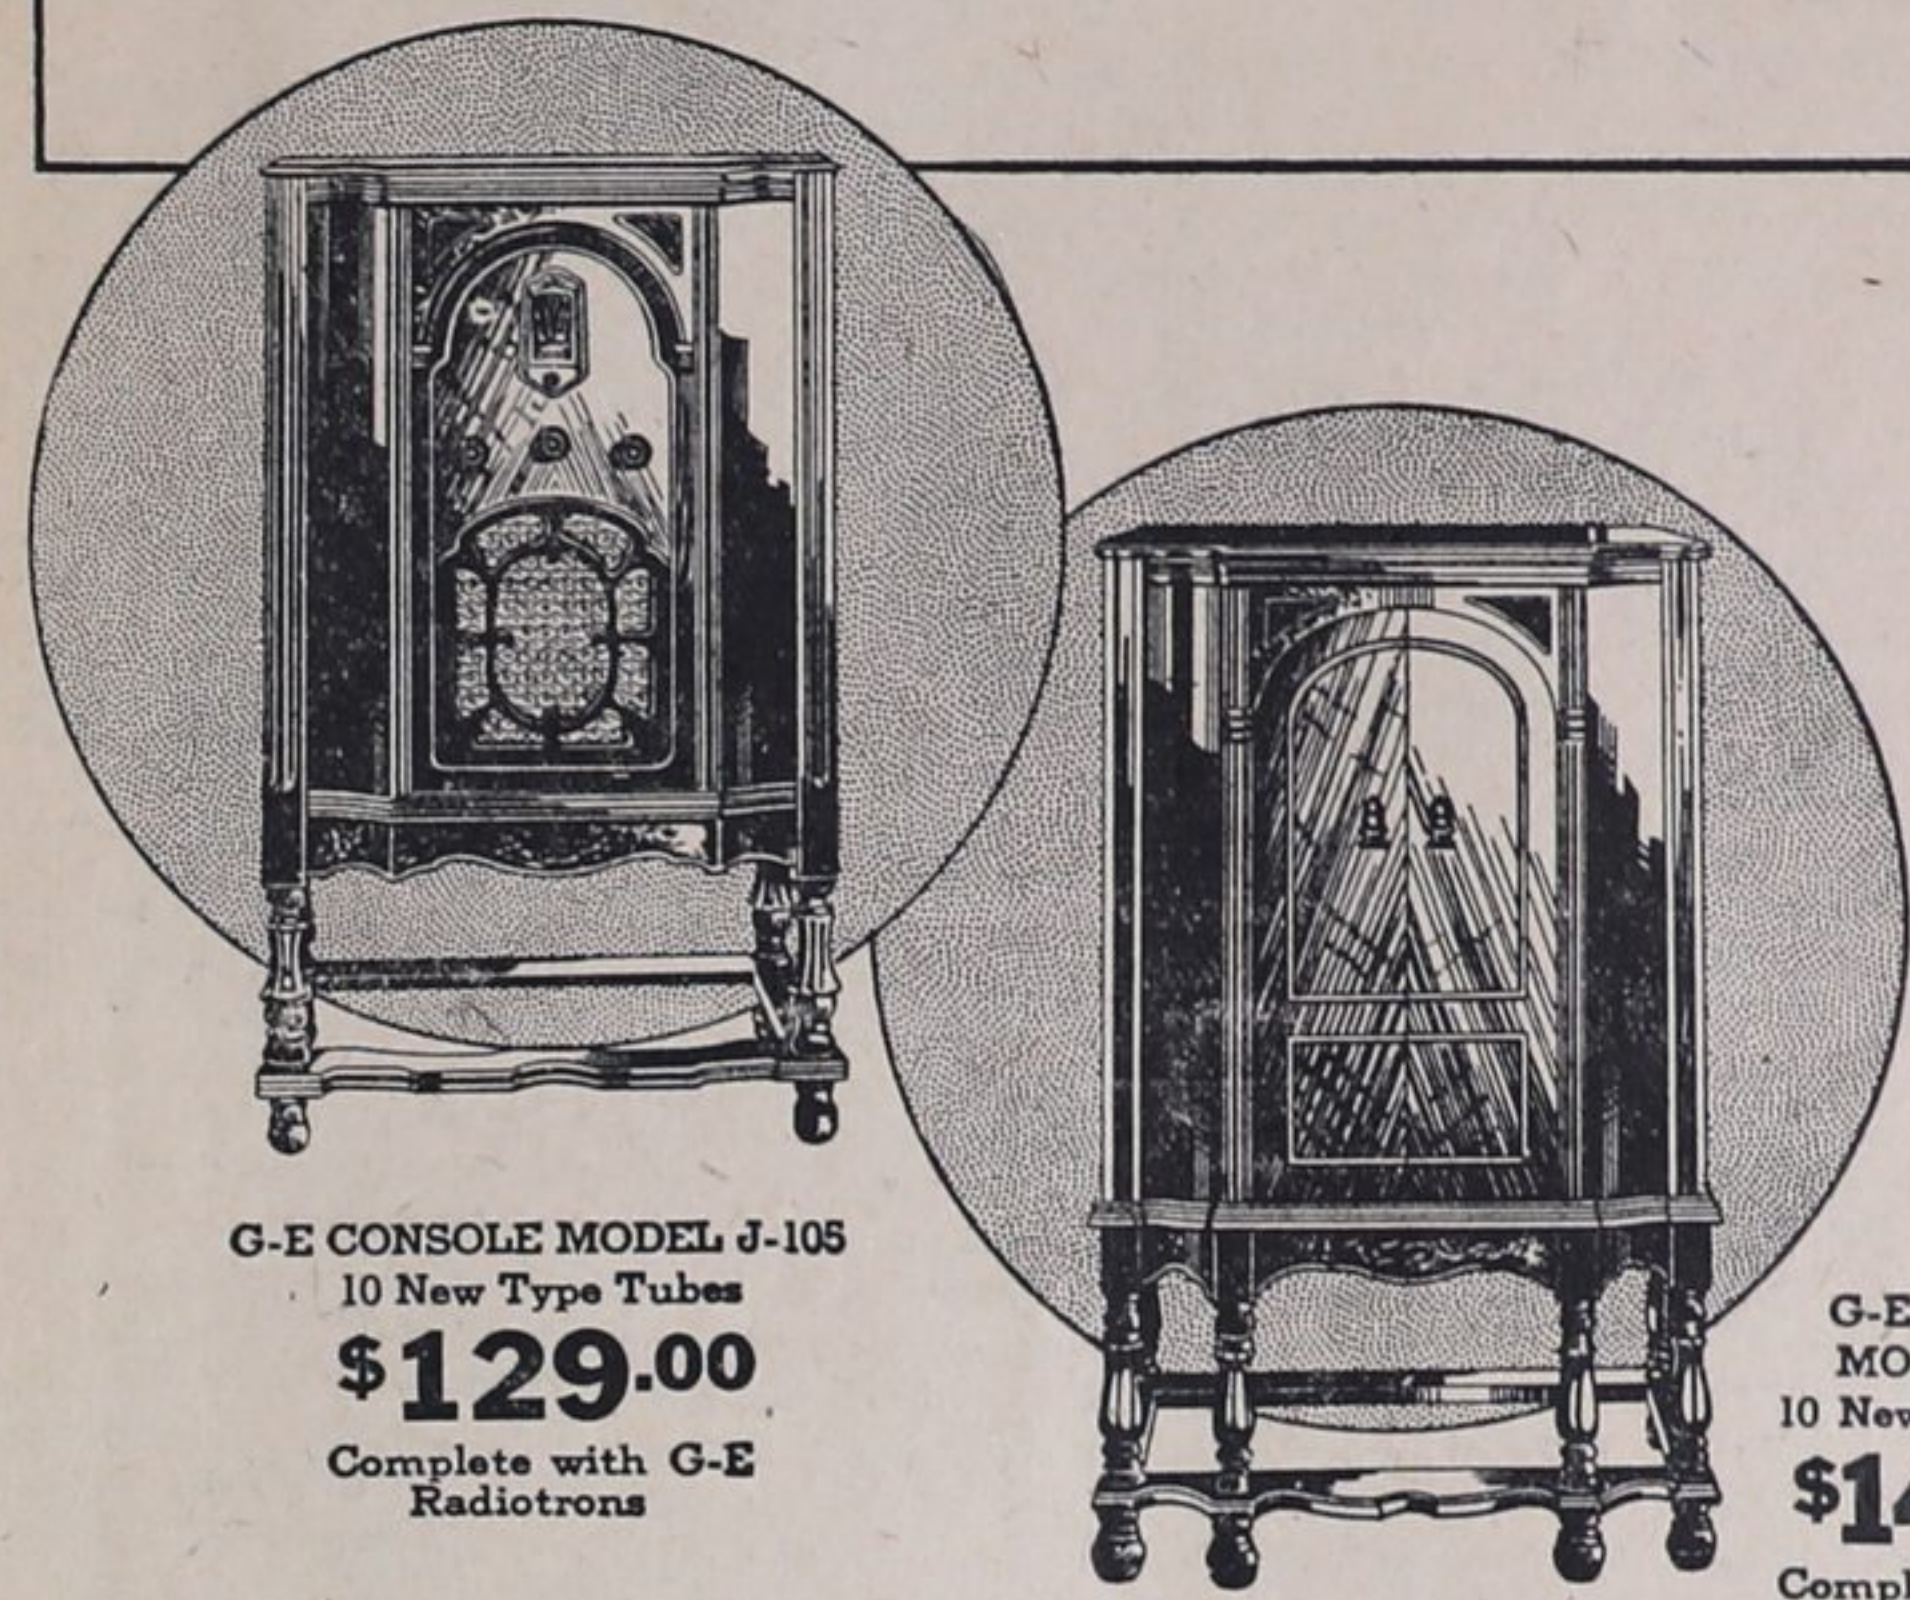

short-wave log book I find the word mega-cycle used quite a lot.

What is this in relation to kilo-

cycles?—J. B., Cobalt.

Ans. A mega-cycle is one thousand kilo-cycles.
