

Brian French, a grade 3 student at Temagami Public School is one of the more than 200 children who will have their teeth looked after by Dr. J. Boyd Fowler under the sponsorship of the Ontario Junior Red Cross.

A man and wife team operate the Junior Red Cross free dental service, currently located in Temagami. Dr. J. Boyd Fowler of Port Rowan, Ontario and a graduate of Toronto Faculty of Dentistry is assisted by his attractive wife, Mrs. Leanne Fowler.

## Junior Red Cross Society Provides Dental Service

The Ontario Junior Red Cross Society is providing free Dental Service to all school and pre-school children in the Temagami Area, comprising approximately 230 school children from Temagami; 30 from each of the schools at Goward and Bear Island; and over 100 pre-school age.

To accomplish this Service, the Junior Red Cross has stationed a travelling Dental Coach at the

Temagami Public School. The Dental Coach is a large trailer, designed to provide dentist's office and living quarters. The office is complete with the most modern dental equipment, including x-ray and the new Airtor drill. The quarters are well-equipped, comfortable and compact.

Dr. J. Boyd Fowler of Port Rowan, Ontario, a graduate of the University of Toronto Faculty of Dentistry, is assisted by his wife, Mrs. Leanne Fowler. Dr. Fowler examines and treats 8 to 10 children per day in his clinic, affording complete and efficient dental service to each child.

The Dental Coach has been operating in Temagami since last September and will continue throughout the summer until early October, when it is expected all school and pre-school children will have been examined. Prior to the summer holidays, school children will be given appointments with Dr. Fowler, so that the schedule can continue uninterrupted by the holidays. Appointments for pre-school children may be made by telephone direct to Dr. or Mrs. Fowler.

Dr. and Mrs. W. D. Beaton were in charge of the Dental Coach from last September until the end of May, when they were relieved by Dr. and Mrs. Fowler. The Fowlers are fast becoming "at home" in Temagami, and are finding a little time away from their work to do a little fishing and exploring the country. The Temagami people are grateful to the Junior Red Cross for this fine service they are providing for the children, and extend a welcome to Dr. and Mrs. Fowler.

applying assessment manual rates to old, dilapidated or unused buildings."

The Bucke town office is currently busy sending out tax bills. These are based on assessments prior to the judge's rulings. Taxpayers who have had their assessment reduced by the judge will receive notices of tax rebates.

Fellows who drown themselves in drink usually don't have far to sink.

## Ruling on Bucke

(Continued from Page One)

ference in land values in various parts of the township.

"For example, there is, in my opinion, a substantial difference in the value of a parcel in Mileage 104, and in the green belt area, although both buildings may have the same frontage on highway 11."

The judge also strongly recommended that the depth influence table on page 48 of the provincial assessment manual should not be used to make adjustments or allowances for extra frontage or width. "Use will result in unreasonable, inequitable and unrealistic results," he wrote. He suggested that where parcels have lakeshore as well as highway frontage, certain adjustments are required when the lake frontage is conducive to bathing, boating, or summer cottage and resort development.

"Due to the relatively large number of 2-wire hydro systems, I would recommend that 2-wire service should be assessed at a lower rate per square foot than 3-wire service," the judge wrote.

He also recommended that special allowance should be made for chemical toilets and pail flushed toilets. In no case should an assessment be based upon a modern bathroom unless the house is of fairly recent construction, or a modern, three-piece bath has been installed.

Judge Robinson recommended that a review should be made of assessments on garages, sheds, barns and outbuildings. "Due recognition should be paid to age, condition, and utility of buildings. Great care should be exercised in

## Prevent Forest Fires Keep Ontario Green

Know your forest fire danger ratings if you are camping or travelling in Ontario's forest fire district this summer is the advice of Lands and Forests Minister the Hon. J. W. Spooner. The forest fire season extends from April 1 to October 31 and the forest fire district, covering the forested areas of the province, is the area north of a line drawn roughly from Arnprior on the Ottawa River to Midland on Georgian Bay embracing all but the most southerly areas.

Emphasizing the need for constant care with fire in the bush, T. E. Mackey, chief of the Forest Protection Branch, says, "During an average fire season, records show that there are only approximately 14 days when a fire will not spread in the bush; it may smoulder but is not likely to spread. But, during the remaining 200 days of the fire season, fire can spread with varying degrees of rapidity.

"This is something to think about when you build a fire to boil the water for your tea instead of taking along a thermos bottle. It is never completely safe to use fire in any form in the bush."

Fire danger ratings which travellers will see posted throughout the fire district are Low, Medium, High and Extreme. Each has a different significance and warns of varying hazards. They are based on weather and other data which play an important part in determining the deployment of the extensive forest fire control organization operated by the Department of Lands and Forests.

Conditions to be expected at each of the fire danger levels and the action normally taken by the forest protection staff are:

**LOW DANGER**—Fires will start from an open flame but spread slowly. As the top of this danger class is reached, fires will start in the finer fuels such as grass and spread until extinguished.

Lookout towers covering high hazard and special risk areas should be manned on windy days and uncontrolled fires should be promptly extinguished. Primary towers should be named and the regular protection force should be available on call. There are more than 300 fire towers scattered across the fire district, 80 to 100 feet high and located on high strategic points.

**MEDIUM DANGER**—Fires start readily from an open flame, burn briskly and tend to spread rapidly as they increase in size. All lookout towers should be manned and the regular protection force held for immediate action on fires reported. Secondary force should be on call.

**HIGH DANGER**—Fires start rapidly from an open flame, glowing cinders, cigarette butt, etc., spread rapidly, and tend to crown

in suitable fuels. The protection force should be completely mobilized and standby crews ready for immediate action. Reserve forces should be on call in case of need.

**EXTREME DANGER**—Fires start readily from sparks, burn fiercely, crown and spot generally and are usually difficult to control during the heat of the day. Supplemental overhead should be arranged for, relief crews should be available on call and emergency action taken as needed.

Being familiar with the meaning of these fire danger ratings will provide valuable warning of burning conditions and bush fire hazards and, officials believe, should also alert campers and travellers to the risks involved in careless or unnecessary use of fire in the forests.

## OPP Close File on Dolly Woods Case

Provincial police are now satisfied that the skull found near Rollet in Quebec last July, is that of Dolly Woods, 17-year-old Brethour girl.

When it was first discovered, Quebec police linked the skull with that of a 14-year-old Rollet girl reported missing since 1941. However, when Owen Mickey Feener made a death cell confession before being hung at Haileybury, he said that he left Dolly's body near Rollet, in the same place that the skull was found.

A medical report from the QPP laboratory, said that the skull contained eye teeth which were still recessed in the bone, and had never come down into the mouth. OPP investigators found that Dolly had both juvenile eye teeth removed, but still lacked her adult eye teeth.
