All kinds of Machine Oil always on hand. W. G. SMITH & CO., Dispensing Chemists. Higinbotham's Block, Guelph. No. 12, Wyndham St.

Acton Free Press. THURSDAY MORNING OCT. 18, 1888. POETRY

THE DUDINE. A little girl I saw, as she sat on the grass, her hair was so long, and her eyes were so blue...

OUR STORY. THE SON OF A KING. Jack turned out of the alley in which he lived into a broad street, and sprang as the bitter blast swept around the corner...

Never Satisfied. "When I was a lad," says a writer, "an old gentleman took some trouble to teach me some little knowledge of the world. With this view, I remember, he once asked me when a man was rich enough? I replied, 'When he has a thousand pounds?'

Evading the Law. A little girl's mother told her if she went out of the gate she would have to whip her, and in an hour the young one was picked up in the gutter, in the midst of mud-pie making.

A Couple of Conundrums. "Aw, can you tell me, Miss Fair," queried George Washington LaDude, after a brief period of intense study, "why the aw—Ponto's candal appendage is like a coming event?"

Humor of the Day. A girl can climb a fence very handsily and gracefully—at least some girls can—but not if a fellow yells "snakes!" just as she is getting over.

THE FATHER OF FISH-CULTURE. Seth Green's Ideas About the Finny Tribe and Some of His Varied Experiences. (Turf, Field and Farm.)

"How did you ever come to devise this scheme?" "I have been working at it ever since I was large enough to bend a pin."

"The above remark was addressed to Mr. Seth Green, the veteran fish culturist, who is known to the entire world, and his reply indicates the extent of his labors."

"When I was quite young," he continued, "I would lie on the limbs of trees that reached over the water, entire afternoons—watching the movements of the fish and studying their habits. In this way I discovered many characteristics which were before unknown. I saw, as every observer must see, the destructive elements that are warring against fish, and I realized that unless something were done the life in the streams of this country would become extinct. To counteract this disastrous end became my life work, and I am happy to say I have seen its accomplishment."

"Were you successful on the start?" "No, indeed. Up to that time all artificial attempts to hatch and raise fish from the spawn had failed, and I was compelled to experiment in an entirely new manner. The work was a careful and tedious one, but I finally succeeded, and to-day I am able to hatch and raise fully seventy-five per cent of all spawn."

"Enormous! Why, that is a larger percentage than either the vegetable or animal kingdoms produce in a natural condition."

"I know it, but we exercise the greatest care in the start, and guard the little fellows until they become able to care for themselves."

The foregoing conversation occurred at Calcutta where the representative of this paper was paying a visit to the state fish hatcheries. It has been his privilege to report very many interesting sights within the past twenty-five years, but the view presented here exceeds in interest anything ever before attempted.

"How many fish are there in those ponds, Mr. Green?" "As we have never attempted to count them it will be impossible to say. They extend way up into the millions, though. We shipped over three millions out of the ponds this year, and there seemed to be as many afterward as before. We have nearly every variety of the trout family and many hybrids."

"You speak of hybrids, Mr. Green. What do you mean by that?" "I have experimented for years in crossing the brood of the various fish, and am still working upon it. We cross the finest salmon trout with the male brook trout, and thus produce a hybrid. Then we cross the hybrid with the brook trout, which gives us three-quarter brook trout and one-quarter salmon trout. This makes one of the finest fishes in the world. He has all the habits of the brook trout, lives in both streams and lakes, develops vermilion spots on his sides, rises readily to a fly, is far more vigorous and fully one-third larger than ordinary brook trout of the same age. The possibilities of development in the fish world are great, and we are rapidly ascertaining what they are."

"As the man of news watched the countenance of Mr. Green while he was giving the above account, he could not but feel that he was in the presence of one of the few investigators who, from a rich and life-long experience, bring great benefit to the world. Let the reader imagine a strong and stalwart frame, surmounted by a head strongly resembling that of Goetzman, and covered with a white silky beard, and luxuriant gray hair. Seth Green, the father of fish culture, is a picture of health, and the reporter could not help remarking so."

"If you had seen me the last winter and spring, young man, you might have thought differently," said the veteran.

"How is that? One would think to look at you, that sickness was something of which you knew nothing."

"And so it was until last winter. I went down into Florida in the fall to see what kind of fish they had in that state and study their habits, and was attacked with malaria in its severest form, and when I came home I realized for the first time in my life, that I was sick. My symptoms were terrible. I had cold, aching pains in my head, limbs and around my neck. My appetite was wholly gone, and I felt a lack of energy such as I had often heard described but had never experienced. Any one who has ever had a severe attack of malaria can appreciate my condition. I went to bed and remained there all the spring, and if there ever was a sick man I was the one."

"It seems hardly possible. How did you come to recover so completely?" "My brother, who had been afflicted by a severe kidney trouble and threatened with Bright's disease was completely cured by a remedy in which I had great confidence. I therefore tried the same remedy for my malaria and am happy to say I am a well man to-day and through the instrumentality of Warner's Safe Cure, which I believe to be one of the most valuable of medicines. Indeed, I see it is endorsed by the United States medical college of New York, and that Dr. Gunn, dean of that institution, has written a long article concerning its value."

"And are you now as well as formerly?" "Apparently so. I keep the remedy on hand all the while though, and do not hesitate to recommend it to others."

"One question more. How many pounds of fish have you here and how are they divided?" "Well, we have 48 pounds which are divided up as follows: 22 pounds of brook trout, 3 pounds of salmon trout, 3 pounds of McClure river or rainbow trout, 2 pounds of German trout, 3 of California mountain trout, 2 pounds of hybrids, 4 of one-quarter salmon and three-quarters brook trout, 2 pounds of gold fish, and 1 pound of Carp. Then we have what we call the occasional pond or 'happy family,' consisting of crosses of different fish, including Kalmbeck salmon, Land Locked salmon, California salmon, brook trout, salmon trout and hybrids. These fish range in size from minnows to 18-pounds, and in age from one-and-one-half months to eleven years. I forget to say, also, that we have a 'hospital' pond, which is entirely empty, which
