WHAT MAKES A WATCH MAIN-

SPRING BREAK Is often asked of the watchmaker. It is a hard thing to say exactly what does it effect on them. My watchbook for the Thunder storms and sudden changes of temperature always brings in three or PEOPLES' four times as many broken mainsprings as best quality of aprings that can be gotten as my rule is to replace them free if broken within a year from the time put in. In fact I think it does not pay to put any thesp material for the sake of being able to do the job a little chasper because I de not think a cheap job is cheap at any price must have been trained in a better shot then the most of watchmakers as I find it hard to get a journeyman at any price ! do the work as carefully as I would like it done, many of them don't take the trouble to take out the stemwinding wheels when cleaning a watch. Of bourge it saves time not to do so and the owner of the watch will never know it as the watch will do as wall without but the winding will wear out twice as soon if you don't. As far as 1 know all watchmakers who have served a full apprenticeship charge the same prices for their work. In getting your watch repaired the question be who will do it the best. I am continually trying my best to keep up the good reputation I have already got and if you think best to try me I wil
