

**Do You Use It?**

It's the best thing for the hair under all circumstances. Just as you add an inch to your stature, so no preparation can make hair. The utmost that can be done is to promote conditions favorable to growth. This is done by Ayer's Hair Vigor. It removes dandruff, cleanses the scalp, nourishes the soil in which the hair grows, and, just as a desert will blossom under rain, so bald heads grow hair, when the roots are nourished. But the roots must be there. If you wish your hair to retain its normal color, or if you wish to restore the lost tint of gray or faded hair—

**The Young Folks.**

**JOLLY JACK O' LANTERN.**

One wild autumn night, when the world was asleep,  
And the sun was in bed, tucked up tight,  
The moon made a party and asked all to come  
Who would shed on the scene any light.  
The affair was quite brilliant, quite sparkling,  
And the guests all with radiant stone;  
And the guests all with radiant stone;  
And the guests all with radiant stone;

**THE NEW GAS.**

It is called Eureka and is an excellent illuminant.

The new illuminant—acetylene—has now a rival to which the name Eureka gas has been given. This gas is the invention of Mr. Hector de la Fontaine, of Italy. It is said to be obtained as follows: Limes as pure as possible is employed as a base, calcium and calcium carbide being added. One thousand parts of the mixture ready for use consist of 900 of quicklime, 50 of calcium carbide, and 50 of calcium cyanide. There is said to be no fear of explosion by mixing with air, no heating of water, and no special burner needed. One thousand parts of the mixture give 50 liters of gas at a pressure of 85 millimeters of water. The photometric intensity of the flame is stated to be 22 candle power. It is claimed that Eureka gas is 50 per cent cheaper than acetylene, and that it does not give off half as much smoke.

**WREN'S LITTLE TRICK.**

When Sir Christopher Wren was building the dome of St. Paul's, a fifty member of the committee of the story goes—insisted that the roof required further support, and desired the architect to add pillars. In vain did Sir Christopher assure him that the design was imaginary. He knew better. The alarm spread, and the great architect was worried into adding the desired columns.

Years passed, and in later times, when architect and patron were dead, cleaning operations in the roof revealed the fact that the supposed additional supports did not touch the roof by two inches, though this was not perceptible to the gaze below.

By this ingenious expedient did Wren pacify his critics, while vindicating his own architectural skill to future generations.

**HER REMEDIES.**

Doctors in the "backwoods" districts often find their patients will refuse all medicines as long as they know that there is any possibility of effecting a cure without its aid. Their belief in "charms" is difficult to unshackle or combat.

A young doctor was called to attend the father of a large family, a stalwart backwoodsman who was in the grip of a malaria fever on which his wife, with all her supposed skill, had been unable to make any impression.

On his second visit the doctor noticed that one of the children had around her neck a string of small bones.

"What are those intended to cure—rheumatism?" he asked the mother with smile.

"No, doctor, those are an Mirandy's have an easy time a getting 'her teeth," was the response. "Those are rattlesnake bones."

The mother was puzzled at the doctor's question. "Why, for the love of heaven, what do you know the best thing for rheumatism?"

"Perhaps I don't know your remedy," said the shrewd doctor.

"I reckoned everyone knew," said the woman with momentary solicitation. "Why, for the love of heaven, what do you know the best thing for rheumatism?"

"Perhaps I don't know your remedy," said the shrewd doctor.

"I reckoned everyone knew," said the woman with momentary solicitation. "Why, for the love of heaven, what do you know the best thing for rheumatism?"
