Can You Afford to Experiment

You have seen an up-to-date Bicycle? Were the axes self-oiling? Were the chain rivets file proof?

Were the cranks spring tempered steel? Were the balls hand-gauged and pedals dust proof? Were the cones locked, insuring permanent adjustment?

Was the chain between the bearings or on one side? Had the chain been submitted to a jerk test of 1200 lbs.?

Were the bearings two point, oil tempered, file and dust proof? Were the sprockets detachable forged and flanged or only stamped? Were the spoke threads rolled, or cut detaching from the strength?

Were there oil cups to fall off permitting dirt to enter the bearings? Was it protected by a reliable home guarantee or guaranteed by some unknown or remote Manufacturer?
