In fact, few men have been for so long a time in demand, and few have given more satisfactory judgments.

Have You Defective Eyesight?

Most people, you included, perhaps, are extremely negligent to their eyes. This is because the public have literally no idea of the number and variety of eye defects. They know in a general way of near sight, far sight, old sight, squint, etc., and many with one or other of these defects foolishly think it is only necessary to pick out at random from a number of spectacles a pair that suits. Alas! many of those selected in_this_way_that seem to suit exactly, prove most injurious and cause permanent injury. The fact is that optical defects occur in such varying degrees that only the competent eyesight specialist with a complete eye-testing equipment, such as I possess, is qualified to discover the exact nature and degree of the trouble and properly correct it. If the glasses you now wear are not right, do not neglect the opportunity of having them properly

attended to. _ Have you any of these symptoms of defective vision :- Pain in, over the back of the eye, granulated eyelids, inflammation, watery eyes pain in the temples (supposed neuralgia) and cross-eye.
