CANADIAN NATIONAL RAILWAYS

How few of us realize that every Canadian citizen is financially interested in the fourteen thousand miles of railway in the Dominion controlled and operated by the Government! How few of us realize that of the total railway mileage in the Dominion the Government operates one-third! These facts are pointed out in an article by Randolph Carlyle in The Canadian Magazine for March. The article contains also a brief history of the railway situation in Canada as it directly affects the Government.

THE WORLD KEEPS MOVING

No one ever suggested a plan of progress that some one else did not pronounce impossible. No one ever urged a step in advance when the cry was not raised. "It can't be done." Whatever is suggested or undertaken or accomplished, there are always a certain number of people who devote their energies to throwing cold water.

Fulton's friends told him, "It can't be done." Yet steamships cross and recross the seas. Stevenson heard the same cry, "It's impossible," and his answer was the locomotive. How many generations laughed at the fantastic idea of conquering the air, yet daily mails are carried now by aeroplanes and the dwellers in most American cities have become so accustomed to the cloud-craft that many of them will not put their heads out of a window to see them pass.

The people who threw cold water have not been successful in checking progress. The world keeps moving in spite of them. But before you indulge yourself in using the stock phrases of discouragement, ask yourself if you will be content to have your share in the glories and achievements of the future, confined to throwing cold water.

Leonard Atkinson, a returned soldier hero, of Acton.—After taking, the bride and groom by surprise a short musical programme was given and speeches expressing good wishes for a bright and happy future. Then came a shower of pretty and useful articles which had been arranged in a daintily-decorated Teddy wagon, drawn by four tiny tots dressed in white. Make the Kernels Grow Fat

The Experimental Farm in Illinois proved that kernels can be doubled in weight and size by breeding. They started with a grade that took 800,000 grains to make one bushel, and by planting nothing but the largest they produced in three years a sample that 400,000 grains made a bushel. It is a demonstrated fact that grain will either breed up or down.
