IT TEMPTED INSPECTION

I have a friend in East Africa who writes from a remote village that he was much puzzled recently by the marked interest in himself shown by the natives. First the 'Mayor' in much-worn dress-coat and a fancy red walstcoat (worn outside the coat) arrived and walked round and round the Englishman at a spot where he was superintending the erection of a "wirelens."

Later the native gentleman requested that in the afternoon he might bring his friends, which he did, to the number of a dozon; and they, like he proceeded to walk round the soldier. peering curiously into his face. In the

THE BROADER VISION

Narrowness of viewpoint has nothing o do with living in a small place. Breadth of vision means looking out from one's self to others, from one's personal interests to the welfare of the whole. You may count one in city with a population of a million and be dwarfingly narrow. And you may ive on a ranch, twenty-five miles from a rullroad, and have the breadth of vision essential to the highest service. Intelligence and uselfishness, not location, make the difference between narrowness and breadth.

Oliver Cromwell is said to have observed very amplently: "It is a good thing to strike when the iron is hot, but it is a better thing to make the fron hot by striking." The successful man is he who to a great extent, croates his own occasions, and, instead of waiting for things to turn up, turns

things up while he walts .- tielected.

"In the cabin, ma'am, sick."

Weeping stove pipes, from the joints of which a tarlike liquid leaks out, is often a difficult trouble to remedy. It is due to insufficient draft. The smoke upwards towards the chimney, will increase the draft. Some find that a little opening in the pipe next the chimney, with a sliding cover, inwhen open, and so causes the smoke to pans out quickly. It all comes to this: Increase the draft and the heat of the pipes, and so cause the smoke to pass out so culckly that it canno cool and condense in the pipes.
