#### IT'S A MIGHTY, PINE BENEDICTION

It's a mighty pine benediction to be sitting in a boat. With your hands upon a cane-pole an' your eyes upon a fish. It's a mighty pine benediction as you surely will admit. An' you don't need to worry of the fishes that you get!

"There are many songs of pleasure an' of merriment an' cheer. There are songs of joy an' laughter, an' of music sweet an' clear. But when my heart is lighted there's a song I'd like to sing. Of a boat upon the water, an' a pole like to swing!

When the sun is gettin' brighter an' the days are like a dream, An' you hear the birds a-singin' by the silver of the stream. Then you feel a mighty benediction in the center of your breast. An' your weather eye is busy, kinder lookin' to the west!

Talk about this time of season when the leaves are green an' the birds are singin' an' the whole world is hummin' a lovin' melody. They say you can't get a better time when you're out on a piece of lead!

Then you kinder shoo the cob-worms from the pole beneath the canoe. An' you see the fish a-squawking while your sturdy bosom heaves. Then again you grab for fish-worms 'over half an inch long. While the neighbors sit to shoutin' 'Come across an' spade my lot!'

Then you hustle to the margin of the flower-edged water. An' you see the crystal surface of the mighty big one. Can you rival the sensation when you slide the old boat in. An' you hear the rocks creatin' 'Lardy brother, where you bin?'

Well I swear to goodness Brother I shied through an' through. When all my line bowled an' I catch a fish or two; An' I feel as dem contented like I owned the gold upon me, an' a scooper in my hand.

I ain't travelled the world over, an' I reckon there's some an' some. That are powerful, enchantin' an' a constant pleasure bringer. But about this time of season I spell 'Measure with a boat! With my hands upon a cane-pole, an' my eyes upon a fish!

#### GET RID OF NOXIOUS WEEDS

During the past nine years, 1911-1920, the Ontario Agricultural and Experimental Union conducted co-operative weed experiments on the farms of the province. Over seventy-five farmers carried on satisfactory experiments. The weeds experimented with were: Canada goose grass, annual sow thistle, wild mustard, cockle, and chickweed. Those who took part in these experiments profited by the experience. In nearly every instance they cleaned the field experimentally and demonstrated to their own satisfaction the effectiveness of the method tried, and, at the same time, their results furnished practical information to others.

Practical information gained from these co-operative weed experiments:

1. That such weeds as perennial sow thistle, wild mustard and bladder campion, can be successfully and comparatively easily controlled by proper methods of cultivation and weeding.

2. That good cultivation followed by weeding in drills provides a means of eradicating both perennial sow thistle and wild mustard.

3. That late in the season of twigs and twigs, can be successfully and comparatively easily controlled by proper methods of cultivation and weeding.

4. That late in the season of twigs and twigs, can be successfully and comparatively easily controlled by proper methods of cultivation and weeding.

5. That mustard may be prevented from seeding in oats, wheat and barley by spraying with a twenty per cent. solution of iron sulphate without any serious injury to the standing crop, or to the seed sowing of clover.

Experiments for 1921.

These co-operative weed experiments will be continued this year, 1921. The weeds to be experimented with are: perennial sow thistle, wild mustard, bladder campion or cow bell, wild mustard, cockle, chickweed, wild oats and sheeps. Farmers having any of these weeds on their farms are invited to write to the Director of Co-operative Weed Experiments, O. A. C. Cleland, Ontario. Information will be gladly furnished to those who wish to operate in the work, instructions for carrying out the experiment chosen will be sent, in the fall a blank form will be supplied on which to report the result of the work.

#### THE CROWN OF THE WORLD

Surveys made during recent ascents in the Karakoram Range of the Himalayas bring up to view the number of peaks on the roof of the world which are known to be over 28,000 feet in height. These are Mount Everest, the two peaks of Kanchenjunga, Makalu, Parangmangkang, and Broad Peak. Around these peaks are now dozens of others that dwarf Chimborazo, a number of which exceed 24,000 or 25,000 feet. The world's highest and best preserved by this glittering assemblage of snowy mountains are faintly reflected in such names as 'Hilde Peak,' and 'The Golden Throne.'

#### WHEN NOAH WON OUT

You remember Noah had to work a long time on that ark. It was a hill business, too, at best, building a boat out of dry land, while the local anvil-and-hammer club sat round spitting tobacco juice upon his lumber, whittling up his pine boards with their jackknives, and telling him what a fool he was for expecting a big rain in a country that was too dry to grow alfalfa. But he kept at it. Finally the flood carried every mother's son of the croakers, was drowned. This is the only instance we know, in either sacred or profane history, where a bunch of knackers got exactly what was coming to them.

#### HIS GREATEST DIFFICULTY

A certain Senator, deploring the dishonest methods of one type of business man, once said, with a smile: 'It all brings back to me a dialogue I once heard in a Southern school.

'Children,' said the teacher, 'be diligent and steadfast, and you will succeed. To the class of George Washington, whose birthday we are soon to celebrate. Do you remember my telling you of the great difficulty George Washington had to contend with?'

'Yes, ma'am,' said a little boy, 'he couldn't tell a lie.'

#### NOT IN GOLD STORAGE

'No-rod-fer, Mr. Brown?' asked the lady, looking at the empty canister.

'Well, Mrs. Rolfe,' replied the fishmonger confidentially, 'I'll oblige you. I always keep a bit up my sleeve for regular customers.'

### JHE OLD MAN OF THE BIG CLOCK

Hay, that storm of ice last Saturday, and the big snow storm on Sunday, just about knocked me out, and I thought for a while, this would be one of the weeks that I would never get up to skip my piece. Rheumatism, well, bless me, if that raw north eastern storm didn't give me the worst attack I've had in ten years. My wife says I'm going about like a bear with a sore toe ever since. Hay, do you know, I was all I could do to get down to the street to put in my vote to give John Hurley a knock-out blow, and when I got down there I couldn't tell me whether I was to vote at the Bakery or at the Creamery. Nobody seemed to be voting for the Creamery, and I was the voters whose initials were from A to M to vote at the Bakery, and from M to Z to vote at the Bakery. Well, I huddled down to the Bakery and the D. R. O. there, seeing I looked too mad to be trifled with, promptly handed out one of my own. I was in the hay, when I got behind the screen I didn't do a thing to that ballot but put the largest cross Y could get into the YES space. I'll bet you the Deputy Returning Officer, Bill Clark, counted my ballot on Monday night. I hope they counted it. Well, anyway, Mary's and mine counted two all right, though when we were married away back there in the long ago we were made one. You see, I'm glad our young folks voted YES too, the whole of them, and helped to swell the big YES vote in Ontario.

#### REASONABLE ITEMS

April showers bring May flowers.

A botanist declares each tree has a voice of its own. We know most of them had a bark.

Now is the time to do your spring cleaning. If you have not got a spring, clean out the well.

As we saw, so shall we reap, does not always apply to the pictures of vegetables we see on the seed packages.

Each season has its bare, and the hand that may have been slightly blistered by the use of the snow shovel looks forward to the callouses of the lawn mower.

The time now is when no one knows just when to shake his winter's clothes.

For, if you wear them you feel bad, and if you don't, you wish you had.

In thirty days more, we venture to say, the sky will be bright and the sun will get out.

The grass will be out as much as it can.

'And burnt carpet rags will enliven the air.'

#### USE OF ALLOYS EVER INCREASING

The development of alloy steels for automobiles, in which the United States has forged the front, has had an effect upon the manufacture of machine tools and other mechanisms.

The alloys now used in high-speed machinery, as well as for the shafts and spindles of machine tools. Their strength and reliability, frequently permit a reduction in size. The development of the 'auto' steel alloys is pursued along strictly scientific lines.

Many manufacturers frequently employ chemists who constantly test the steel employed, and some demand an analysis of the metal, not only of samples, but of each individual piece, the tests extending to the core as well as the surface of each bar.

#### HE GAVE LEGAL VIEW

A lady deeply interested in health matters and who adopted every new health system and took up every fresh health theory as soon as it was mooted, during a dinner conversation the other evening engaged in a hygienic debate with a friend.

'Please tell me, I have heard so many different opinions about it, ought one to lie down to think on the right side?'

'She imagined that he was a doctor. But he was a lawyer. He replied, blandly:

'If one is on the right side, madam, it should not be really necessary to lie at all!'

#### 'KING BUD'

'We praise all the flowers in fancy. His the needs of fruite ere they're pecked, ignoring the common old later.'

'When, in fact, he's the King of the Field.'

Let us show the old boy we esteem him, Sort of old boy he shares our affections, Let's show him we share our affections, And crown him with glory—'King Bud.'

#### DETECTING FLAWS IN METALS

There is sometimes used a very simple means to detect cracks opening from the surface of metals. The surface is first moistened with kerosene and then dried off with a cloth. It is then coated with chalk. After a little while the oil works out of the cracks and stains the chalk. A sort of diagram of the hidden flaws and defects is thus produced.

### Canada's Timber Crops—A Great Possession

About sixty years ago Rev. H. C. Cook, a Baptist minister, removed from Cape Rich, a little hamlet on the peninsula, between Meaford and Owen Sound, to Acton with his wife and three or four children. They finally made their home where the oldest son, Edward, now resides with his wife and family. Rev. Mr. Cook was a earnest Christian worker. He participated in the removal from Ballinafad of the building which still stands on Nigma Street and which was used for forty years as the Acton Baptist Church. For many years he was the minister there, but finally retired. He was the eager desire of his life to see a new and more commodious Baptist Church erected in Acton, and the favor was granted him. He was at the opening services of the new church on Mill Street in 1878, and was heard to reverently exclaim when the beautiful new edifice was finally dedicated at the interesting opening services, with almost the devout fervor of a layman, nineteen hundred years before: 'Lord, now lettest thou thy servant depart in peace, according to thy word; for mine eyes have seen Thy salvation, which Thou has prepared before the face of the people.'

Well, I must not let it about this time. My rheumatism is growing awfully. You may be thankful to get a sliver of this stuff this week. Even that much has cost me a good many pangs. I'll try and tell you more about the Cook family next time.

Goodbye, cough!

### The Old Man

#### GREEN OLD AGE

Two delightful glimpses of vigorous and happy old people are given in Days Before Yesterday, by Lord Frederic Hamilton. One glimpse is of Gladstone; the other is of Lord Fred. The D. R. O. there, seeing I looked too mad to be trifled with, promptly handed out one of my own. I was in the hay, when I got behind the screen I didn't do a thing to that ballot but put the largest cross Y could get into the YES space. I'll bet you the Deputy Returning Officer, Bill Clark, counted my ballot on Monday night. I hope they counted it. ### WAR HEROES GET ALBATRAN LEGACIES

An interesting patriotic ceremony occurred in Paris recently when the first distribution was made of a legacy written many years ago by a French Albatran, who in his will left a grant to be distributed among five soldiers who had distinguished themselves in the service in the great war that was to restore Alsace-Lorraine to France.

The name of the Albatran was M. de la Motte. He died in 1902, but left no will of the restoration of the lost provinces of Alsace-Lorraine to France. He was a Frenchman, and his will was written in 1902. He left a legacy of 500 francs. Each of the five men who received the gift had the Medal of the Legion of Honour. Two of them still are in the army, one is an upholsterer and two are now farmers.

#### THERE WAS NONE TO BARE

The skipper of a small steamer that ran up and down the Clyde River managed one day at low tide to get his vessel on a mud bank. After he had exhausted his entire vocabulary in describing unfavorably the tide, his steamer and his crew, he leaned back and said to the mate: 'I'm shaking his feet at her, he said: 'My mate, if you take one drap of rum, you'll see that I'm not wrong. I'll warm her up for you!'

#### THE BUN'S CARBON SHELL

It has often been suggested that the brilliance of the sun's disk is due to incandescent particles of carbon, and within the last twenty years or so the presence of carbon in the sun has been demonstrated by the spectroscopist. Later there was shown that there is a thin layer of carbon in the lower part of the sun's atmosphere. It surrounds the solar globe like a luminous shell, and under normal conditions, is probably not more than two hundred miles above the sun's surface. But when an eruption takes place, from beneath the carbon layer, like all the other constituents of the solar atmosphere, is broken up and locally displaced by the tremendous agitation.
