The strain of the car's weight ways points upward ready to puncture form by far the major part. A total is placed on the rim of the wheel in- any inflated tire that passes over it. importance are schools, 40 of which are sillency, takes up all this strain, and tires, would be absolutely harmless to

Tires divided into air bulkheads, or filled with sponge rubber, or semisolid have also been devised. But there again, the resiliency of

pneumatiq is not uttained. Tire manufacturers are still waiting -for the ideal puncture-proof pnoumatic tire. The elimination of tire trouble has been the goal of inventors and rubber manufacturers for many yours.

The Long Life Inner Tube is an improved pneumatic tube. Its special features furnish to the motorist protection against those annoyances famwhile Alberta farmers' received \$223.- the trouble. It is the culmination of years of experiment, thought and expense, and has been attained without the introduction of any mechanical or material means other than rubber and its recognized company with usual

compounding ingredients. * Hitherto it has been impracticable to use a tube beyond a certain limited thickness because of the tendency of the tube to creep within the casing and destroy itself. By an application of the laws of vacuum in the construction of The Long Life Tube this creeping movement has been entirely over- pected at Guelph Saturday at 3.15. of the casing.

Limited, has acquired the patent rights cars in grounds at 10 u. m.

of Canada.

Tire: As to punctures, The Long Life Tube positively will not leak air, double the number of punctures-one tube, undergoing special test, having been Disadvantages pierced with natia of various sizes more than three hundred times (300) and retained the fifty (50) pounds air
