HARDWARE AND EURNPEURE Beattle Electric Washers - Agency Dodge Brothers Motor Cars and Tracks WILLOW STREET ACTON ONTARIO

Make it better make it simplet has always been the bey note of Ford engineering and manufacturing methods. This police has been carried forward to its highest, fullest expression in the New Ford

system. This system is reliable and effective because both the faur wheel and separate emergency brake are of the mechanical internal expanding type with all six brakes fully enclosed for protection against water sand and dirt

An example of this is seen in the methods of the six brake

The ignition system is another example of simplicity, in its in away with high tension cable cities preventing short The engine is unusually simple in design and represents a ew development in engineering because it develops 40 H P at . 200 revolutions per minute. This means you can attain a

high travel speed with a slow engine speed. The low revolution speed contributes to greater efficiency and long life The whole idea back of the New Ford is to bring the benefits of modern economical transportation to all the people, and get the greatest possible use from a car over the longest period of time at a minimum of expense
