WATER MAY KILL PLANTS

something of useful interest in the fol-

lowing short discussion about watering

house plants, by G. C. Warren, of the

Federal' Department of Agriculture.

"After potting the plant should receive &

a liberal watering and then no water

given until needed. Blooming plants

require more water than the slower

growing plants such as palms. With a

really require water. The appearance of

the plant is, of course, a good indication

of its requirements. A method commonly

followed is to tap the pot with the

knuckles; if it has plenty of water the

sound is dull, if it is dry the pot will

ring. Occasionally syringing is bene-

ficial, especially for ferns and other

foliage plants. If properly used, the jar-

diniere is a source of added beauty to

our plants, but ordinarily causes great

injury. This injury results from stag-

nant water collecting in the bottom of

the bowl causing what is termed "wet

feet." This may be overcome by placing

a few_inches of gravel or an inverted

saucer in the bottom for the pot to res
