He went as a guest of the Imperial Airways, and will spend some weeks between Cairo and Cape Town in search of information for a book which he is writing about the art and practice of flying.

NEW ROCK INDUSTRY

Each succeeding year sees refrigeration playing an increasingly important part in the storage, transportation and pre-cooling of fruit and farm products. In this connection there is special interest in an article appearing in the current issue of the Cold Storage News Dairy and Cold Storage Branch, which states: "As an outcome of the trend toward a greater use of insulating material in the construction of homes and offices, and in other fields, the Canadian Government Department of Mines forsees the establishment of a rock wool manufacturing industry in Canada. Should this materialize, the development of the larger deposits of dolomite in the Niagara Peninsula of Ontario would follow, it is stated. Surveys conducted by the Department disclosed the presence of these self-fluxing, argillaceous deposits and researches indicated their suitability as raw-material for the manufacture of rock wool. At present, the total requirements of the product are imported. Rock wool is one of the most effective insulating products on the market. It is made by melting suitable natural rock to a very fluid condition in a supola furnace using coke as fuel. The molten material issues from the furnace in a small stream and is atomized by a blast of steam, which converts it into a mass of fine, pliable, colorless, glassy fibres. These fibres constitute the rock wool of commerce. It is very similar in most respeots to slag wool, but is practically free from the deleterius element, sulphur, compounds of which are sometimes found in objectionable quantities in slag wool. The insulating value of rock is due to the myriads of tiny air cells entrained with the interlaced fibres."

SALT FIELD DISCOVERED IN SOUTH SASKATCHEWAN

Preparations are now being made for the manufacture of salt on a large scale at Simpson, Sask., according to information received by the Natural Resources Department of the Canadian National Railways. A salt field, capable of producing 10 tons per day, was uncovered recently at 3.445 feet by a company that was drilling for oil. Already thirty tons of salt have been produced from this wellby a small demonstration plant. Pumping difficulties were experienced at first but this has been overcome and a comnany has been formed to proceed with the manufacture of the product.

Laughter is the sun which drives winter the human face.—Hugo.

A Grateful Acknowledgement

The Congregation of the United Church, Acton, gathered in their Annual Meeting on February 9th,

The Pinancial Report for the year just closed revealed the very generous bequest of the late James Albert Murray.

It was moved, seconded and carried unanimously that a public acknowledgement of the receipt of \$2,000.00 be made.

We, therefore, acknowledge with sincere gratitude and appreciation the receipt of Two Thousand Dollars, from the Estate of the late James Albert Murray, according to Paragraph 4. Section F of his will, dated February 23rd, 1919. And also to express our appreciation of the courtesy and helpfulness of the Executor, Mr. W. G. Murray, in all matters pertaining

All of which is very humbly and gratefully submitted on behalf of the Congregation. *

C. L. POOLE, Chairman, J. C. MATTHEWS, Secretary.

REFUSE SCREENINGS AS FUEL

Grain from Western Canadian farms arrives at terminal elevators with a con--E. J. James has been appointed Clerk tent of about two per cent, foreign matter, the refuse portion of which is called refuse screenings, being made up of weed seeds, dust, finely broken grain, chaff, -Before starting on your shopping straws and similar trashy matter. The weight per measured bushel varies from fifteen to forty-five pounds. From bumper crop, like that of 1928, these refuse screenings amount to upwards of

Since 1920 the Feeding Stuffs Act, administered by the Seed Branch, Dominion Department of Agriculture, has practically prohibited the use in Canada of refuse screenings as an ingredient in any feeding stuff. So long as feed prices emained high there was an export demand for this material, but with depreciated values of feeds even the export market for refuse screenings failed, and the only economical use to be made of

them at the present time is as fuel. by power plants for heating purposes where steam is required in relatively all those with whom she came in contact. pressure, not over 80 pounds.
