Recipes for New and Novel Dishes, Household Ideas and Suggestions

POULTRY AS YOU LIKE IT
Chicken when company comes? Of course! But do not stick to fried, broiled or roasted chicken. Serve unusual chicken dishes that will both please and surprise. Season well.

CHICKEN MERANGUE
1 young chicken
1/2 cup butter
1 finely chopped onion
1 small carrot, cut in cubes
1 turnip, cut in cubes
1 cup canned tomatoes
1/2 teaspoon sugar
Salt and pepper

Cut up a young chicken in quarters. Sprinkle with salt and pepper, dredge with flour and brown in salt pork fat. Put in a baking dish with the other ingredients and cook slowly in the oven until the chicken is tender. Serve in the dish in which it was cooked.

MEXICAN CHICKEN
4 to 6 pound fowl
4 or 5 potatoes
1 cup seedless raisins
2 cups canned tomatoes
Butter
1 tablespoon sugar
2 tablespoons chopped onion
2 tablespoons parsley
Flour
Salt and pepper

Smear the fowl in a small quantity of salted water until tender. Remove from the broth. Set the fowl aside for stuffing. To the chicken broth add the cut-up potatoes, sugar and the finely-chopped mild onion. Let this sauce cook down. In the meantime prepare the stuffing by cooking and mashing the potatoes and adding to them the raisins and enough milk to make the mixture the stiffness of ordinary mashed potatoes. Stuff this while still hot, into the body cavity and neck of the fowl. Crowd in all the stuffing possible. Pour a little melted butter over the chicken. Put it in the oven to brown. Thicken the tomato sauce to the consistency of gravy and add 2 or 3 tablespoons of finely-chopped parsley and green pepper, if desired. When the chicken and the surface of the tomato stuffing have become delicately brown, place on a large hot platter. Pour part of the sauce around the chicken and serve at once.

TWO TEA TASTIES
Each summer we are drinking more and more tea. Somewhat it touches the spot in warm weather. Here are two recipes for tea drinks that will enable you to serve "something different."

Try them.

ARAB TEA
Boil small bunch of mint with 1/2 cup sugar for an hour. Bruise mint with spoon. Add juice of 3 large oranges and 2 lemons. Add grated rind of 1 orange. Pour over this 3 pints fresh tea strain and cool. Pour over ice in glasses, serve with sprig of mint. Makes two quarts.

GINGER ALE TEA PUNCH
Make 1 1/2 cups tea, using 2 teaspoonsful tea leaves. Dissolve in it 1 cup sugar, add 1/2 cup orange juice, 1/2 cup lemon juice, 1 pint ginger ale, 1 pint club soda, few orange slices. Serve in punch bowl. Makes 1 1/2 quarts.

CIRCUS SALAD
(Serves 1)

Place banana cut lengthwise and dipped in orange juice to prevent discoloration, on a bed of shredded lettuce. Top with 3 large or 5 small sheets cut from a peeled orange. Put animal crackers together sandwich fashion with peanut butter moistened with orange juice. Arrange in circus parade style with a striped peppermint candy pedestal for the elephants feet on the top orange slice. Serve with peanut cream dressing.

PEANUT CREAM DRESSING
(Serves 6)

2 tablespoons lemon juice
2 tablespoons evaporated milk
2 tablespoons peanut butter
1/2 teaspoon sugar
1/2 teaspoon salt
Beaten until smooth and creamy

NO ROMEO

He was very shy and although Don presented him with innumerable opportunities for declaring his love in private fashion, he could never summon sufficient courage to take advantage of them. They were sitting in the garden one evening, with the usual half-hour intervals between remarks, when the climax was reached.

"Isn't it funny?" she said. "That the length of a man's arm is the same as the circumference of a girl's waist?" "Is that so?" said he, mildly interested. "What do you say if we get a piece of string and see if it's right?"

Fighting the Great Scourge with Knowledge — A Campaign to Wipe Out Ignorance, Fear and Neglect

FACILITIES FOR CANCER TREATMENT

In this, the final article of the series on Cancer, I propose to tell my readers where, in each of the provinces of Canada, they may secure treatment for cancer, with the local facilities in each place, that is the supply of capable surgeons, or of deep x-ray and of radium.

So far as surgical treatment of cancer is concerned, facilities are quite good. Almost every city has one or more competent surgeon, who, if they have paid much attention to cancer study, will be able satisfactorily to deal with cancers amenable to surgical treatment. The doctor's handbook about to be supplied to every doctor in Canada by a Committee of the Medical Association, is bound to be of great help to doctors living in remote sections of the country where libraries do not exist.

In most large hospitals there is very good x-ray equipment. Certain parts of the country suffer a handicap in that adequate supplies of radium are not available. For example, east of the city of Quebec to the Atlantic, there are altogether but 270 milligrams of this agent. Since it is difficult to treat any considerable number of cancer cases with less than one-half a gramme of radium one can understand how seriously the Maritimes are handicapped in the fight against Cancer.

In Alberta there are centres for treatment in Edmonton, at the University College Hospital, in the Radium Institute, Calgary, and in the Galt Hospital, Lethbridge. Altogether 270 milligrams are available in the province. British Columbia has about 600 milligrams a month used in the General Hospital of Vancouver and in private hands. Some time ago the government of the province purchased 300 grammes, but this purchase at the time of writing has not been put to use.

The Saskatchewan Cancer Commission operates clinics for treatment in Regina and Saskatoon. There are 1678 milligrams in use. In Manitoba the Cancer Research Institute maintains treatment in hospitals in St. Boniface and Winnipeg. The Institute has one gramme of radium. Both Saskatchewan and Manitoba have well-equipped emanation plants for the preparation of radon, each under the control of a capable physicist. Nova Scotia has a centre for cancer treatment in the Victoria General Hospital, Halifax, which is owned by the government and operated by the health department through a Commission. There are 210 milligrams of radium.

Prince Edward Island is without any facilities for radium treatment, but hospitals of the Province afford good surgical and x-ray attention.

The only clinic for cancer treatment in New Brunswick is the one in Saint John Hospital, which has 90 milligrams of radium.

In Quebec the cities of Montreal and Quebec possess between 2,896 milligrams of radium. In the latter city there are clinics in L'Hotel du Precieux Sang and in L'Hopital du Sacre Coeur, while in Montreuil there are similar clinics in L'Institut du Radium and in L'Hopital Notre Dame as well as in the General Hospital and in the Royal Victoria.

Ontario is rather well organized to handle cases of Cancer. There are well-established institutes of treatment in association with the general hospitals of Hamilton, Kingston and Toronto, and the Civic Hospital, Ottawa. Altogether Ontario possesses for treatment about 9 grammes of radium, and all Canada probably wanted it just as much as I did. However, I was ready to go higher and she wasn't so that was that.

Partner fortunately was quite pleased with my bargain and said what a nice lamp it will make if we ever get the Hydro. In the meantime it is doing all that is required of it for the present giving me light and a good aim at that to write and type to at night.

The best pickles, by the way, and my friend's chili sauce, were both finished after we got home and were none the worse for being put on one side.

The Hydro is rather nerve-wracking these days, that is if one listens to it. The trouble is there is so little definite news that it seems waste of time listening to the number of broadcasts and yet one is afraid not to listen in case there might be something really important.

I can't say I like listening to these various commentators who try to size up the situation for our benefit and who apparently know very little more than we do ourselves. The outlook certainly isn't very encouraging but while the powers that be are thrashing things out, there is one little piece of advice which is just as good now as it was in the last war, at the time it originated. And that advice is "Business as Usual."

This is the concluding article in the Cancer series.

LIST OF FALL FAIRS FOR THE DISTRICT SURROUNDING

The Agricultural Societies Branch of the Ontario Department of Agriculture has just issued a complete list of dates for Fairs and Exhibitions this year. The following are dates in which many Fair Parks readers will be interested:

Bracebridge September 22nd-23rd

Caledon September 23rd-24th

Galt September 22nd to 24th

Million September 22nd-23rd

Mount Forest September 27th-28th

Brampton Sept. 29-30-Oct. 1

Georgetown September 26th-29th

Markham Sept. 29-30-Oct. 1

Aberfoyle October 4th-5th

Arthur October 6th-7th

Erin October 8th-10th

TOO MUCH SILENCE

VUKON RICH IN PLACER GOLD

Placer gold mining in the unglaciated areas of Yukon shows promise of continuing as an important industry for at least another fifty years, according to the Department of Mines and Resources, Ottawa. The Klondike district, chief Canadian source of placer gold, and the main field in the unglaciated area, alone contains sufficient proved reserves to keep most of the dredges now operating or under construction in operation for more than fifteen years.

Development along modern engineering lines is showing that the Klondike contains much larger reserves of placer gravels than was formerly regarded as probable, and large areas of probable and possible gravels still remain to be settled. Total placer gold production in Yukon in 1937 was 60,340 fine ounces, valued at \$2,042,000, and the total value of all mineral production from the Territory to the end of 1937 is \$215,444,000, of which \$192,000,000 represents the value of gold production.

Yukon Consolidated Gold Corporation, which holds practically all of the known placer reserves in the Klondike district, has well in excess of 100,000,000 cubic yards of payed gravels. From 1933 to 1937 inclusive, more than 24,000,000 cubic yards have been dredged by the company since 1933 five dredges have been reconditioned, five other dredges have been built or projected, a new unit in the hydro-electric power plant has been installed, many miles of canal supplying water to the plant have been built, power lines have been reconstructed and large stripping and throwing plots with miles of ditches have been built, and camp and workshops have been erected. During 1937 the Corporation continued to expand its operations and altogether spent approximately \$2,000,000.

The resumption of larger scale shipping of silver-lead concentrates and ore from Mayo was the most important mining event of the year in Yukon. During the summer of 1937 a total of 9,000 tons of concentrates and ore was shipped to the smelter by Bradwell Yukon Company, Limited, and other operators in the district. This was exceeded only in 1936 when a total of 10,140 tons was shipped. Production from the mine at Goda Hill continued steadily throughout the year and a total tonnage of ore was treated in 1937. The mine is at 1,400 feet above sea level and a further extension of 1,000 feet is planned.

Exploration is carried on in the Caribou district during 1937 has proved the presence of a wide number of quartz veins carrying metallic values in the area although a lot of the rock is worthless, whether they are carious or worthless has not been seriously attempted.

Parents are prone to over-discipline the young brother who makes noise. Of course, baby does have to sleep in comparative peace. But brother is not being naughty, just because he forgets. Many a child has learned to consider the noise a nuisance, because he has to tip-toe and whisper every second he's in the house. He'll be kinder to his kid if he isn't being everlasting shushed.

Something is wrong in the boy's heart, house with its usual little children. That something is the lack of our hearty friend, sound. Its perpetual suppression is likely to cause irritations and throw a

pall over normal everyday living for the whole family. The family should think of baby as a joy.

A SMALL COMPLAINT

"Any complaints?" asked the orderly officer.

"Yes, sir," came the voice of Private Higgins.

"Well, what is it?" asked the officer.

"This steaks is underdone, sir," said Private Higgins.

"But I don't see any steak," exclaimed the officer.

"It's right here under this potato," wailed Private Higgins.

by a Telephone Call

Frequently the veterinary surgeon's immediate presence and advice will save cattle—and protect a farmer's capital against the inroads of disease, accident or other emergency. Quick help is the farmer's only defense against those things. The telephone brings help immediately. Without a telephone a farmer runs constant risk. A telephone is insurance at low cost.

Charming Envoys Present Nova Scotia's Flag to New York

Stanley H. Howe representing Mayor La Guardia of New York, shown as he extended the city's welcome to two charming ambassadors from Nova Scotia who presented him with the flag of the Canadian Maritime Province which will be unfurled over the Nova Scotia exhibit at the New York World's Fair.

Miss Shirley Black, left; Miss Marian Miller, center; Miss Margaret Higgins, right, all beauties of honor at the crowning of Miss America 1938 at conclusion of the annual Atlantic City beauty pageant.

Mr. Justice Davis to Probe Machine-Gun Contract

Following publication of a magazine article by Col. George A. Drew, questioning awarding of a contract for 7,000 Bren machine guns to the John Inglis Co. of Toronto, the Federal Government has appointed Mr. Justice H. H. Davis, of the Supreme Court, as a one-man commission to investigate the contract. Head of the Inglis Company is Major James Hahn, Toronto. Col. Drew charged that full details of the contract and the profits to be made by the company from its production were not divulged by Defence Minister Ian MacKenzie.
