In contrast to Diotrephes, a man of a different sort is named in Demetrius. He had a "good report of all men, and of the truth itself." Notice how a man's goodness is not commended apart from his knowledge of the truth. This is because the only ultimate standard is derived from the truth we know.

Home Dried Fruits and Vegetables

Although the drying process of fruits and vegetables does not preserve as much of the food value as is customarily preserved in canning, yet with the limitations on the use of cans, sealer tops, and sugar, drying may again become an important method of preserving food in the home. In the drying operation preservation is affected by one of two factors, says F. E. Atkinson, Dominion Experimental Station, Summerland, B.C.: (1) In the case of fruits, the natural sugars are concentrated until they approximate 66 to 70 per cent. of the juice in the dried product. At this concentration, the moisture of the produce becomes a syrup as that in jam, so that the same principle that preserves jam will preserve dried fruit. In general, fruits are sufficiently dry when a handful firmly pressed together will separate again into individual pieces. (2) In the case of vegetables, the natural sugar content is very low and drying of these products must be continued until they are so dry that growth of micro-organisms is prevented. This will require a molature content of less than 4 to 5 per cent. When dried to this state leaf vegetables such as spinach will crumble to dust if rubbed between the hands. Potatoes are brittle and break leaving a shiny surface. No evidence of pliability should be present in any vegetable if sufficiently dry. Although a product may be dried to the required moisture content, undesirable changes in flavor, colour and odor may still take place. The equipment required for home drying consists of trays that fit a small cabinet which can be heated.

DROWNED INFANT ON FALSE REPORT

LONDON, (CP) — Mrs. E. M. A. Guy who was advised several times by the War Office that her husband was a deserter, pleaded guilty to infanticide in a London Court and was bound over. After the Bench was informed by the War Office had learned that husband was not a deserter. The baby had been drowned in a bath.

Good News

There was good news recently from overseas for Canadians who are now buying Victory Bonds [illegible] largest Canadian [illegible] successfully during the past two years.

The Commander of the Canadian Army, Lieut.-General A. G. L. McNaughton, declared, "Full many notable new chefs have won their spurs in the sterling field of dairy farming." He urged the continuance of dairy farming during the war. He listed the questions that he included regarding equipment for aircraft, guns and many other weapons of war and pointed out the constant and intensive endeavor in this country to develop new and better weapons which would bring an advantage to the Dominion forces over the enemy.

The distinguished head of Canada's army injects a new spirit of enthusiasm into the duties of Canadian people at the approach of the Fourth Victory Loan when he confirms the fact that our paid purchase of yesterday have been turned into hard materials of warfare to beat the enemy.

On the basis of this statement from the Canadian general we heard from Cairo where a military observer declared that the Canadian tolls had played a major part in whipping the Afrika Korps.

"I did not observe a single workshop which did not contain one important tool stamped 'made in Canada'," he said.

Let us never forget that above all else our act in purchasing bonds is a blow that the Germans will surely feel.

CANADIAN OBSERVER

Scott Young, a fine Canadian Press writer in England, writes in the current Liberty (ever hear of it?) about the ordinary Englishman's wishes for a better world after the war. Among other detriments of old bodies-become-slums, he mentions that the windows are so small that they let in little air.

Since when has an English family wanted air—indoors? They are used to go—for prodigious walks in all weathers. Indoors they wanted none of the outdoors. And little heat.

Back in 1919 in the Wessex country, some exploring Canadian soldiers stopped for tea one afternoon at a roadside place, an isolated cottage. The room was musty, though the sun shone bright outdoors. A Canadian opened the one window wide. A moment later two young Englishmen in uniform entered and closed it except for a crack. Presently the lady arrived with the tea. But before she served it she slammed the window shut. The tea and eggs were fresher than the air.

A resident of Canada born in Ireland used to say that in matters of modern living, England was twenty years behind this continent and Ireland was twenty years behind England. That he knew whereof he spoke may be corroborated by many observers. And this is worth remembering when the plans for rebuilding Britain, socially and physically, are compared with what we may have or what we may afford after the war. For one thing, Mr. Young points out that up to the present in England, a high-school education can be obtained only by those who can pay special tuition. Here, it may be recalled, high schools have been free schools for a long, long time. Perhaps of living persons, only Sir William Mulock can recall when, at least in the part of the country in which he lived, the free schooling ended with the high-school entrance.

And now school attendance is compulsory even in the province of Quebec.—The Printed Word.

Poison Ivy May Spoil a Picnic

Poison ivy is one of the most vegetable poisons in North America, and is to be found growing under a variety of conditions, wet or dry, shaded or exposed, and in any sort of soil from pure sand or rocky ground to rich woods or fields. While widely distributed across Canada, complaints of poisoning are most numerous from Ontario and the adjacent parts of Quebec, especially from the wooded hill and highland regions so attractive to campers and picnickers.

Experienced picnickers in preparing the outfit for the day take the precaution to include a piece of strong laundry soap. Many remedies have been suggested to allay the burning and irritation caused by coming in contact with poison ivy, but one of the simplest is immediate washing of the parts affected with strong laundry soap.

Poison ivy has many guises. It may readily be confused at first sight with Virginia creeper. However, the leaves of the Virginia creeper appear in leaflets of five. The leaves of poison ivy are borne alternately on the stem in threes, similar to the strawberry leaf. In early summer poison ivy has a whitish flower on a green background; the Virginia creeper has clusters of blue berries on red stalks. Full information may be found in publication No. 634, which may be obtained by writing to Dominion Department of Agriculture, Ottawa.
