**LAST PUBLISHED UNIDENTIFIED MAN WAS FIRST PRESIDENT OF FALL FAIR**

Here is another former citizen of Acton who may be remembered by some, but who will doubtless not be known to most. Who is he? The last picture was of the late George Havill and several reported recognizing the gentleman who died about ten years ago. Mr. Havill was keenly interested in Acton's affairs and was the first president of the fall fair when it was organized in 1913. Unidentified

**THE MIXING BOWL**  
BY Anne Allan

Hello Homemakers! The other day a friend of mine opened her purse and out dropped a number of things including a penny. A compact and comb were retrieved along with the Hydro bill as the penny rolled in the grass. Mrs. D. replied "Never mind it's only one cent." However as we drove along the highway we recalled how much housework we had accomplished before setting out. It was Mrs. D. who, in one morning, had vacuumed six floors, pressed a suit, mended a rip in a pair of overalls, made a gelatin salad and served two cups of tea using her new electric kettle. For the other jobs she had used electric equipment too, and the cost of operating all these appliances throughout the morning was the same amount left in the grass—one penny.

Truly, we should be grateful that these services are billed to us after we have had the advantage of the use of Hydro with 10 days grace to receive a discount. With this in mind we should pick up our pennies and pay within this given period. My father always said, "Take care of the pennies and the dollars will take care of themselves."

**TAKE A TIP**  
1. Defrost the electric refrigerator when the frost becomes pencil thick. This is usually every two weeks. Turn on the refrigerator as quickly as possible after cleaning. This saves the motor from working overtime to establish the normal temperature required to keep foods fresh.

2. If a normal temperature is not being maintained as indicated by the use of a refrigerator thermometer (that is 40 degrees in centre of cabinet), then call a serviceman.  
3. When an oily aroma permeates the refrigerator cabinet at this time of year it may be due to the fresh oranges of the Juicy type. During May and November it is advisable to store oranges and grapefruit along the walls of the cabinet.

4. If the refrigerator dial has not been turned to freezing for at least 1 hour before trays of ice cream mix are to be placed in the unit, ice crystals will develop in the dessert. This may be partially prevented by covering trays with foil or waxed paper. By the way, excessive amounts of sugar in the dessert prevent fast freezing and ingredients should be carefully measured.  
5. Damage to the porcelain of a refrigerator may result from a crash by a kiddie car or sharp object. A small chipped portion may be patched using porcelain enamel paint, purchased from an electrical shop. Follow directions on the can of paint.

6. The motor of the electric refrigerator should be cleaned occasionally. A vacuum cleaner attachment makes this job easily.  
7. Foods stored in the refrigerator keep well if in good condition. Let hot foods become cool, then cover and place in the refrigerator so that air may circulate on all sides of the dish. Sort foods out everytime the unit is defrosted.  
8. Dishes of food should only be stacked if thoroughly chilled or if food has been frozen in freezing unit and is being kept frozen.  
9. Wrap all strong flavored foods such as cut melons. Berries should not be washed until just before they are to be served. Very ripe berries will keep for several days if arranged loosely on a tray or plate.  
10. Fresh meats should be unwrapped and placed in meat keeper. If the piece is too large and has to be placed on a plate, cover with wax paper.  
11. If ice cubes have an unpleasant taste the trays should be emptied and washed in warm water to which baking soda has been added. Rinse twice in cold water. Mrs. T. B. asks for directions making a Banana Whip so that mixture does not darken?

**Answer:**  
**Banana Whip**  
3 well-ripened bananas  
1 cup orange juice  
Juice of 1 lemon  
1/2 cup sugar  
Few grains of salt  
1 cup whipping cream or evaporated milk  
Peel and mash bananas with stainless steel fork or wooden masher. Add fruit juices, sugar and salt. Stir well and chill 10 minutes in electric refrigerator. Fold in partially-whipped cream. Pour into a freezing tray and set it on the bottom of the refrigerator unit. Yield: approximately 1 quart.  
Mrs. R. P. asks for Chocolate Ice Cream recipe that is not too sweet?

**Answer:**  
**Chocolate Ice Cream**  
3 teaspoons gelatine  
1/2 cup cold water  
2 squares bitter chocolate  
1/2 cup confectioner's sugar  
1 cup milk  
Pinch salt  
1 1/2 cups whipping cream or evaporated milk  
Soften gelatine in water (5 minutes). Melt chocolate over the low heat of your range. Add sugar and blend thoroughly. Add milk gradually. Bring to the boiling point, stirring constantly. Remove from heat and add gelatine and salt. Chill in electric refrigerator until thickened. Beat well with a rotary beater. Add vanilla and fold in partially-whipped cream. Pour into bottom of the freezing unit. Have a freezing tray and set it on the temperature control to coldest point for freezing.

A father cannibal was recently overheard lecturing his son: "How many times must I tell you not to speak when you have someone in your mouth?"

**Tree-Lined Roads Of Puerto Rico**

We were reading of the small parkways that thread the island of Puerto Rico, and of the beautiful drives through shaded arbours of trees underplanted with ornamentals. We read of the origin of this roadside development as follows: "At a very early date the Puerto Ricans encountered the problem of road maintenance and the solution was the adoption of what is known even today as the "Caminero" system. A man of the locality was hired on a permanent basis and was given a certain stretch of the road which it was his job to maintain. He had to clean the ditches and repair the chuck holes, one of his additional duties being to plant trees alongside the road since it is quite uncomfortable to ride along on horseback under the glaring sun. Not only did the caminero do the original planting, he also maintained it and replanted whenever necessary. Since there was not a great deal of direction from the top the individuals could use their initiative and that probably explains the "several personalities" in the character of the planting along the various roads.

"This system continues today, and we have also heard that the camineros always competed with each other to have the most beautiful roadside development. There's some indication that this idea is being encouraged by the modern Board of Tourism. In any event, we have here in Puerto Rico Arboretum, with U-bend scenic vistas, of which we are proud. It was a government-sponsored project, but a lot of individuals have a hand in its development."

**ARBORETUM FOR MCGILL**

McGill University has dedicated a 375-acre tract of woodland near Macdonald College at Ste. Anne, Quebec, as the Morgan Arboretum. The property is the gift of Mr. and Mrs. James Morgan and their son, Harold M. Morgan—who preserving the woods for future generations. Besides being a beauty spot on the Island of Montreal, McGill University plans to use the Arboretum to "stimulate Canadians to realize the necessity for the conservation of the Dominion's forest resources."

FILED IN AFRICA on a five month safari, "King Solomon's Mines" is a spectacular picture of the adventure classic to be presented at the Roxy Theatre starting next Wednesday. Stewart Granger, Deborah Kerr and Richard Coulson take refuge here behind an embankment to escape the murderous hoofs of a stampede.

**Late Jack Miner Pioneer Bander**  
It was in August, 1909, that the late Jack Miner caught and banded his first duck, which was shot by Dr. W. E. Bray of Anderson, South Carolina. This constitutes the first complete record on this continent of where a bird was banded and where killed.  
Last fall, 1950, the largest catch of Canada geese ever to be made on the Miner Sanctuary, or elsewhere on earth, was caught in the Miner trap on November 15th, at 6:00 p.m. In the catch were 732 Canada geese. Of this number 403 were new ones that had never been caught, 192 had been previously caught and banded in previous catches the same fall of 1949 and 137 had been banded in previous years as far back as the fall of 1938.  
All bird banding records made at The Jack Miner Sanctuary are filed each year with the United States and Canadian Fish and Wild Life Services.
