

... Good-day madam,  
I am your  
gas company representative

At the present time and during the next few weeks, representatives of United Suburban Gas Company, Limited, will be calling upon you at your home, or place of business. Their purpose is to list your requirements for services and appliances. They will be pleased to answer your questions. Each representative will carry official identification -- ask for it.

Natural gas is a modern fuel, serving residential, industrial and commercial needs. It is cleaner, faster, more efficient.

It will heat your home, cook your food, heat water, refrigerate, dry your clothes and burn your garbage better than any other fuel.

We will endeavour to see that you get the most efficient and economical results from your use of Natural Gas.

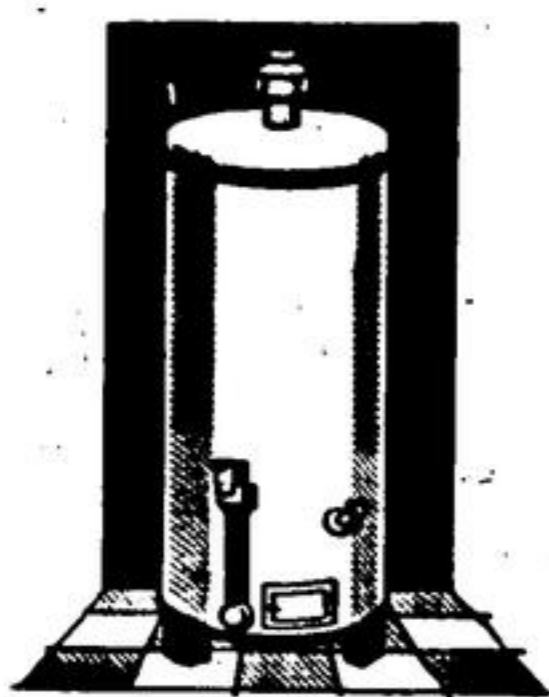

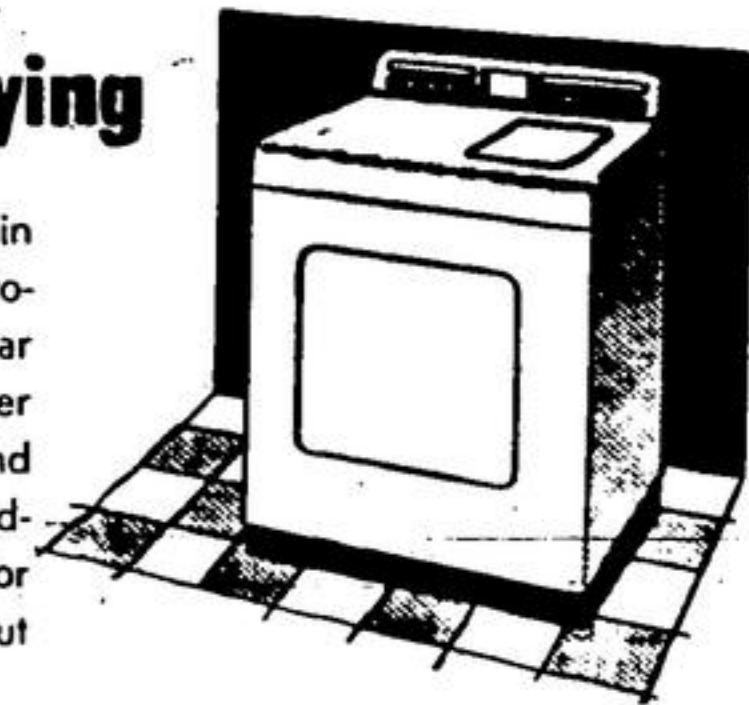

### **GAS** Automatic Refrigeration

Only the gas refrigerator has a basically different freezing system. Since the gas refrigerator has no motors, pumps, or moving parts of any kind, you can fully appreciate its silence. You are assured a long life of useful service—the longest life of any automatic refrigerator. Year after year, its "Jet-Freeze" system continues to operate as efficiently and economically as the day it was installed.

### **GAS** Automatic Clothes Drying

Gas has indeed "got it" for clothes drying. Dry clothes in a matter of minutes, not hours as on a clothesline. An automatic dryer saves an average of 30 eight-hour days a year in time and labor as well as money. The use of the dryer reduces the growing child's washable wardrobe to half and the linen supply to half. These and the countless other advantages make the automatic gas dryer a logical choice for any housewife who is interested in taking the drudgery out of washday.

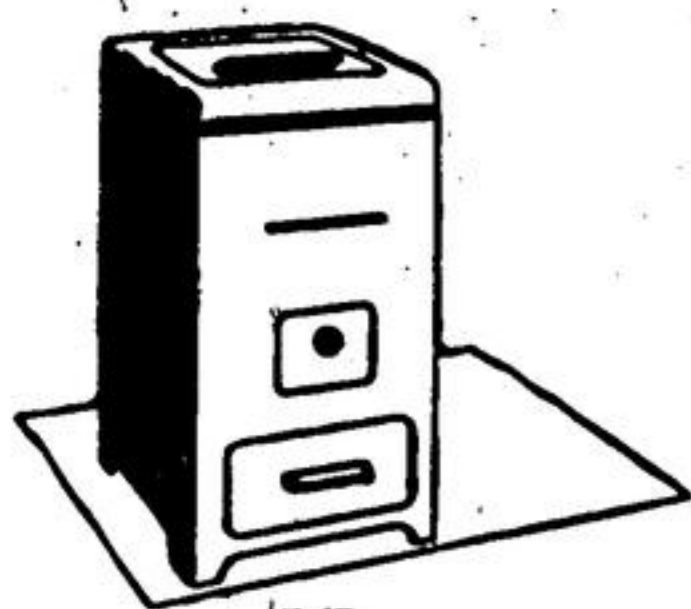

### **GAS** Automatic Water Heating

With an automatic gas heater you can get any desired temperature by just a turn of the "snap-action" thermostat any and every time hotter water is needed. The water heater responds immediately, accurately and automatically, quickly raising the temperature of the water in storage. The dependable thermostat and the gas flame keep the water always hot—always ready. The water is as hot at the end of the day as at the beginning. Gas is always on the job 24-hours a day dependability.

### **GAS** Automatic Cooking

Gas saves food, time and money. Its many advantages are available at remarkably low cost. Gas, as used in the modern gas range, delivers instant, even heat from a tiny simmer to a searing flame. Gas is the first choice of the vast majority of women . . . for economy, speed, dependability, cleanliness, convenience, performance and safety. "Gas Has Got It!"

### **GAS** Automatic Incineration

A modern gas incinerator is a "must" for disposing of garbage. The cost of operation is hardly noticeable and the features of sanitation and convenience are certainly worth much more than the initial investment and operating cost. The modern gas incinerator costs less to install than any other type . . . and it is faster than any other type. The gas flame dries out the contents of the incinerator quickly and then completely consumes it, leaving only a residue of powdery ash. If you use a gas incinerator your home will be a healthier place in which to live.

### **GAS** Automatic Home Heating

Heating your home can be made carefree and effortless for the entire heating season with gas. With gas heating there is no tiresome, time-consuming drudgery and no furnace tending. Gas is the cleanest of all heating fuels. It burns without smoke or odour, leaving no residue. It is piped directly to the burner eliminating the necessity for fuel bins, tanks and ash cans. Your carpets, drapes and household decorations will be cleaner. Gas heating is economical, too. It doesn't cost—it saves.
