### Let's Make a Start

The time has come in Acton when we may well give some attention to the providing of a hospital here. By that statement we mean preliminary ground work which will take a few years before anything visible can be expected.

True there are grants available from governments to assist in providing hospital facilities but the initiative must come from Acton and not alone from council but from all citizens who are interested in the continued growth and welfare of the citizens.

There is no use thinking it will be a quick and easy undertaking. To us it seems that the first step would be to appoint a committee to give study to the whole question and present to a public meeting the facts and figures that are available. The committee could also secure information from other municipalities in which a hospital program has been instituted.

Last week a new hospital was completed at Park Credit and turned over to the board to be opened shortly. What might be done could be the opening of a fund first, to which donations could be made to form a sort of down payment. Such a fund would provide opportunity for receiving bequests and donations by citizens. When one buys or builds a new home a down payment is required.

The trend today is certainly toward treatment of all illness in hospitals. To serve best they need to be readily accessible and the day is fast approaching when every town must have a hospital of its own. They need not be large to start with but should be of a type which can expand with the need and growth of the community it serves.

First move of course is the establishment of a fact finding or exploratory committee and the sooner this is put into being the better. We need not proceed rapidly but let's at least make a start.

### Quick Change

The astronomers say summer officially arrives at 4:57 p.m. EST on June 21, when the sun crosses Cancer. All right, but what happened to spring?

Seems we rush right from winter into summer weather in Canada. One day in mid-April Winnipeg had a temperature of 84 degrees, and Winnipeg that day was warmer than Havana, Miami and Los Angeles.

Of course, Canada is a big country, and it can be summer in one place and winter in another. The same day with Winnipeg basking in the heat, it was below zero at Cambridge Bay, in the Northwest Territories.

The generally mild winter meant that most farmers got an early start on seeding. British Columbia had its mildest winter on record, and the Prairies generally also had an easy winter with frost leaving the ground fast. It was also a mild period, comparatively speaking, for Ontario and Quebec, while the Maritimes enjoyed an early spring.

Now the birds are in full chorus across the land. The migratory flights are well under way to the far north. At Hillspring, Alta., a large white swan attracted attention the other day when it dropped out of northbound flight and wandered around the streets for a while before resuming its long journey.

But there's a thought-provoking note about these bird songs which bring joy to many a nature-lover. The National Geographic Society calmly suggests these musical cries are really warnings to other birds to keep off.

The male birds are the first arrivals in the north. They choose an area that offers enough food to support a family, then start singing.

The bird songs aren't really invitations to romance, or concerts put on for the benefit of human ears, these experts contend. The songs tell other male birds that the property is taken.

Then, this report says, having established his own territory and fought off other males, the bird is ready to advertise for a wife. It sounds disappointingly human.

### For Sobering Reflection

We don't have Canadian figures for comparison but a recent report indicates that more crimes were committed in the United States last year than ever before, and juveniles were responsible for nearly half of them.

FBI Director J. Edgar Hoover also reported that the crime rate in rural areas jumped considerably more than in cities.

Revealing the FBI's annual crime report compiled from statistics of law officials across the nation, Hoover said a total of 2,790,400 major crimes were committed in 1957, one for every 61 persons. This is a jump of 9.1 per cent. over 1956.

The report also disclosed that the crime rate had increased four times as much as the population rate in the last eight years.

Youths under 18 accounted for 47.2 per cent. of arrests in major crimes such as murder, manslaughter, rape, robbery, aggravated assault, burglary and larceny.

Juveniles committed 67.8 per cent. of all auto thefts and 53.1 per cent. of thefts of all kinds. Sixteen per cent. more youths were arrested in towns under 25,000 population and 8.1 per cent. more in larger cities.

The survey showed that 95 per cent. of the crimes were committed for profit.

Burglaries, larcenies and auto thefts comprised 93 per cent. of the total, a 9.4 per cent. increase. Robbery losses totalled \$479,000,000 but 59 per cent. of the goods were recovered, including 93.1 per cent. of stolen autos.

The figures provide ground for some sobering reflection since the economy and life of the two countries are very similar.

The cure isn't in doing everything for today's juveniles but it certainly isn't in neglecting them either.

### It's Clean Up Month

The slogan CLEAN UP! PAINT UP! BEAUTIFY! will keynote Beautification activities in hundreds of communities from coast to coast this month. Last year over 600 communities across Canada held Campaigns.

This May several hundred Canadian communities will carry out Beautification projects in many centers this annual Clean Up Campaign has become a permanent community activity organized by a Service Club or local group. These campaigns are a yearly reminder to the community of its responsibility to itself, for the outward appearance of a community often reflects the spirit of its citizens. How much more attractive it is for visitors to see clean, fresh-looking homes, stores and public buildings, with flowers, grass and trees in profusion!

But it all can be done even without a highly organized campaign if individuals consider their obligations to have their property present an attractive appearance.

May is beautification month so let's make the town and district a place to be proud of.

### It's Strangling Cities

Traffic congestion is strangling Canada's major cities, a national survey published this week reports.

Only two of the thirty-one cities that responded to the survey reported no traffic problem. These two, Yorkton and Weyburn, both in Saskatchewan, were among the smallest centres questioned.

In each of the remaining twenty-nine cities, including all of Canada's metropolitan areas, civic officials not only reported steadily worsening traffic conditions but unanimously admitted there was no solution in sight.

The survey says, "revealed was an almost unbelievable picture of disrupted civic life, tattered private nerves and costly municipal confusion."

Two salient points stand out from the report:

First, half the forty billion miles driven every year in Canada by our five million cars is done on city streets. Yet we spend eighty cents out of every road-improvement dollar on rural and inter-city routes, leaving the city spots to get progressively worse year by year!

Secondly, many Canadian town-planning experts are not convinced the cities can handle the growing volume of traffic even by plowing unlimited sums into highway development. If all such projects being discussed over planning tables today were completed at current prices they'd cost a forbidding one thousand dollars for every family in the country — and there'd still be no guarantee the national traffic jam would be licked.

The answer? More and more Canadian and U.S. planners are swinging to the view that the cores of our large cities may eventually have to be blocked to motor traffic altogether.

Perhaps that's all the more reason towns our size should be increasingly conscious of the need to give attention to parking problems.

## Renovating Early Church Buildings

Changes and renovations at both the United and Presbyterian Church buildings these days brought back recollections of other days so among my souvenirs I located a couple of historical bookslets regarding these two establis-

hers. The present Knox Church building had the corner stones laid on September 12, 1894. One was laid by Rev. J. Godfrey of Honan China and the other by Archibald Campbell Esq. of Acton. Rev. J. W. Ross was minister of the church at that time.

The opening services were held on January 24, 1895. The evening service was planned to start at seven o'clock but at 6:45 the edifice was filled to capacity and the service began.

Let us quote from the booklet put out at that time on a description of the new building. "The superstructure is veneered with pressed brick and rests upon a stone foundation. The exterior in appearance is of a neat, substantial character with semi-circular arches, front and side gables and ornamental belfry and studded roof, the height is about 60 feet above the sidewalk.

The extreme length of the building is 92 feet and the extreme width 60 feet. The auditorium is 52 x 38 feet with transepts adding 10 feet on each side and a choir recess under an elliptical arch 16 feet wide and 10 feet deep behind the pulpit.

The Sunday School room, 34 x 27 feet, is so placed to be available as an annex to the auditorium. Over the lecture room and extending across the auditorium is a deep gallery. The auditorium with gallery will comfortably seat over 600 persons and with a little crowding and the use of the lecture room accommodation can be given for over 1,000 persons.

Another extract from the booklet of 1895 gives the information that the congregation dug the walls.

Two salient points stand out from the report:

First, half the forty billion miles driven every year in Canada by our five million cars is done on city streets. Yet we spend eighty cents out of every road-improvement dollar on rural and inter-city routes, leaving the city spots to get progressively worse year by year!

Secondly, many Canadian town-planning experts are not convinced the cities can handle the growing volume of traffic even by plowing unlimited sums into highway development. The answer? More and more Canadian and U.S. planners are swinging to the view that the cores of our large cities may eventually have to be blocked to motor traffic altogether.

Perhaps that's all the more reason towns our size should be increasingly conscious of the need to give attention to parking problems.

I provided the stone, except for the courses and supplied all the sand for the building of the church. The contracts for the building and furnishing of the church totalled \$10,000 and other items brought the total estimated value up to \$9,367.

That was back in 1894. Little sheds were erected with the proceeds derived from the sale of the old church and its site. Now after 61 years of fine service to the congregation it is having some extensive repairs to the structure.

At the United Church an extension is being built adjoining the building erected in 1875. This is at present new Sunday School accommodation but will also provide the start for a new church edifice at a later date.

It was in 1874 that Rev. John C. Stephenson started work securing a new church to replace the one at the corner of John and Church Streets. The contract for the new church was let to Eli Snyder.

The first church building used by the Methodists was on Main Street and was the one story stone building adjoining the three section dwelling. It served from 1834 until 1852. In the year 1852 the congregation built the building on Church and John Streets and used it until 1874.

## THE GOOD OLD DAYS

Taken from the issue of the Free Press, Thursday, May 1, 1858

### BACK IN 1938

Taken from the issue of the Free Press, Thursday, April 30, 1938

Last Thursday night, the bar of the Dominion Hotel was broken into and a quantity of cigars, cigarettes and flask of liquor stolen. A dollar or two of loose change in the till was also taken.

A few nights previously an entrance was affected to Stathams grocery by a rear door and some 20 or 25 pounds of chewing and smoking tobacco, a box of cigars and about four dollars in copper taken. The indications point to the perpetrators being local miscreants and well acquainted with the premises of both places visited.

Last Thursday morning when the dead glass was being hauled off in the yards of the Acton Tanning Company fire ran under a stack of hemlock bark and ignited it. A silent alarm was sent into the fire brigade. The stream of water was promptly on the scene and after a couple of hours, putting out the bark the last smoldering atom was quenched.

The annual meeting of the Lawn Tennis Club was held on Monday evening with the following officers elected for the year: President, A. A. Neale; vice-president, Charles Headroom; secretary-treasurer, Miss Mary Jackson; vice-president, Miss Bertie Smith; general committee, F. A. McLean; J. Weston, F. McLean; T. Boardman, G. C. Matthews.

J. B. Mackenzie, contractor, is converting his building on Church Street into a carpenter shop and adding a new store front 20 x 27. Two stories with office in front on the ground floor. He will operate a planer, circular saw and other small machines with gasoline as motor power.

Mr. and Mrs. John Alger removed to Guelph this week where Mr. Alger has been appointed a guard at the Ontario Reformatory. Mr. Alger will continue his connections with the Lowe Scots local militia.

The boys of St. Albans' Young Peoples entertained the members of the congregation on Tuesday evening in the Parish Hall with a comedy entitled "Gold Storage". Those participating included George Frost, Olive Rogers, Bill Blanche, Douglas Macpherson, Bob Frost, Bert Patrick, Percy Elliott, Bill Frost and Harry Rogers.

The first Presbyterian Church building was erected in 1847 and served as a church building for 50 years.
