

# P.U.C. to Process Effluent Ted Tyler Questions Mayor

(Continued from Previous Page)  
to which Mr. Tyler replied, "I am afraid not."

A lengthy discussion followed between the two men with the commissioners listening as follows:

Mr. Cook: "The information I got was that you were the sole authority who said the effluent could go into the plant." I contacted Beaumont and Mr. Beatty stated the sole authority came from you.

I spoke to the commission and the chairman and the members have nothing about it and neither did you."

Mr. Tyler: "It wasn't unusual business why should they?" you might be asked to prove that statement? There are no two or three in the room right now who can prove this.

#### Investigated Possibility

Mr. Tyler informed the mayor he had contacted Mr. Daly, who in turn contacted the engineer to investigate the possibility of handling the waste.

Tyler: "The engineers okayed Beaumont's effluent being pumped into the plant."

Cook: "I contacted the engineer and Ken Hyde said it was you and he was working under your instructions."

Tyler: "He was instructed to investigate only. I was contacted by Mr. Beatty who enquired how much could be pumped. I was not prepared to say so contacted the engineer who was instructed to investigate. He gave the authority and me. He was responsible."

Superintendent Daly stated he knew well that he was contacted one night and told the waste could go into the town disposal plant.

#### OK'd By Engineers

Clark J. McGeachin, when questioned on the subject remarked he found no objection from Mr. Daly and enquired from Mr. Cook if reports would have to be made by him on the effluent from Beaumont's waste because of the need to be pumped away.

Cook: "The engineer told me he was working in the interests of the town. I told him to do what you wanted him to do and that's it."

of the mayor unless you have an authority by letter. There should have been a letter sent to the engineer on the authority of the town council."

Tyler: "I was aware that permission had been given by the engineer to pump in and neither was the commission."

At this point Chairman Stewart stated, "None of us were aware of it until the first meeting in the year 1959."

Mr. Stewart enquired if the commission requested the engineer to investigate and Mr. Tyler advised him he had after Mr. Daly had been contacted. It was the suggestion and his opinion only tests were being taken.

Mr. Tyler enquired if there was any necessity for Mr. Hyde, the engineer, to be in Acton and when informed there was he remarked, "We will see what is what when Hyde comes."

#### New Lines Completed

Hydro supervisor D. Mason informed the commission the new lines into the Micro Plastic plant on Main Street North had been completed with as small a power cut off as possible.

Mr. Mason also reported on the lower start off last week and informed members it had been carried out over several days. The relay station at the substation. It was started out the relay had not been set high enough when the connection to every took place one year ago.

Mr. Mason noted the station was once operating on two thirds of its capacity but the trouble had been rectified and it was now operating at full capacity.

#### Water Report

Superintendent J. Lambert of the water works department informed the commission that had been used since more and he had informed Mr. Cook to plan out our own disposal system.

The commission authorized the superintendent to engage Mr. Neill, architect, to be engaged to draw up plans.

Mr. Lambert reported construction was progressing well and the water works were to be completed in January.

Mr. Cook enquired concerning the water works in Lakeside and Newmarket.

Mr. Lambert responded that they were working on the Newmarket project.

Mr. Cook enquired concerning the water works in Lakeside.

Mr. Lambert responded that they were working on the Lakeside project.
