Today Acton Flour Mills has tomodern equipment, has in recent years added elevators and storage capacity. It operates at capacity with 10 employees. Flour produced in Acton finds a ready market across Canada, Almost 100% Ontario winter wheat is used in the process of making flour.

storage capacity. It operates at capacity with 10 employees. Flour produced in Acton finds a ready market across. Canada, Almost to speed up unload-195 100% Ontario winter wheat is used in the process of making flour.

Early Beginnings

According to history. Acton had its beginning about 1829. We imagine that shortly after the light-are burning in the building the millistones. Just when the present mill was erected is largely conjecture, but it is reasonable to assume its history goes well over a hundred years. Water power, is used no more in the mass operated in Acton for the past 40 years.

During the past ten years see eral changes have taken place at quirements.

A desire to own his own business after driving trucks for many rears for someone else prompted Jack Ridley to start his own trucking business in 1946 in Acton.

Since that time many change have taken place and the business has jumped ahead by leaps and bounds as the owner keeps progress foremost in mind.

In the space of 14 years Miritary has increased his unit from one to the 11 being use today. Holding a PCV licens class F.S. and F., allows the company to haul livestock, road construction materials, building materials such as cement blocks and bricks and do general hauling in the district.

Livestock is hauled from the district.

Livestock is hauled from the form the district.

Eleven drivers are employed by Mr. Ridley and they all live within the Acton area. It became a limited company on June 30, 1959 and has been an agent for several cement block and brick companies. Four years ago the company expanded and a new garage was built on the property at the corner of Guelph and Agnes Streets.

Today the company had dump trucks, three stake semi and three D.H.O. strucks.

Baptists

Company (Canada) Ltd. Their plant was opened during this decaste of development.
The completion of the plant in July of 41958 marked the second stage of dypansion for this firm, it new entry to the Canadian inclustrial scene.
The 88,000 square for the second stage of second.

rine 88,000 square foot building how serves as head office for Porter's Disston Davision, Refractiones: Division and Thermoid Division. The major portion of the manufacturing area is devoted to the production of Disston products which are recognized the world over as leaders in their field.

Largest on Continent
Disston saws have been man
utactured in Canada for over
(itty years, and include saws for
the professional carpenter, home
craftsmen, circular woodcutting
saws up to 100 inches in diameter
and weighing over one ton. Disston holds the distinction of have
ing manufactured the largest
stone cutting saw ever produced
on the North American contin-

More recently Disston has entered the power tool field with two electric sabre saws, the "Dayger" for home work shop use, and the "Dauntless" for industrial use. Also two six and a half inch electric circular saws, the "Discus" and "Defender" are being distributed to the Canadium market.

Recent Addition
A recent addition to the Disston garden tool line is the Disston "Dragon" electric hedge and shrubbery trimmer which features a fixed, all position handle.
A complete modernization of production flow was possible with the move from Toronto. Additional equipment is being installed which will increase output of the present plant.
Toward the end of 1959, equipment was installed which would permit the production of refractions specialties in Canada, marking additional Porter expansion in the Canadian industrial scene. With a total of 66 acres of property available on the northern expansion.

Serves Natural Area Gas

While matural gas was first trunsmitted through bamboo poles in China over 2000 years ago, Acton has had natural gas pipe lines only sipe 1956 when over \$1,000,000 was spent by the United Gas Ltd., the natural gas distributing company in this arcea, to lay a portion of that pipeline to service Acton and its neighbors; Georgetown and Mil-

First indications of the arrival of natural gas through a townwide network of underground lines, were applications for the distribution franchise.

Council discussions, Fuel Board hearings and other details concluded, the first installation work began in May of 1956. Distribution lipes were installed on most streets and the commodity is now available for industry and commerce, as well as home use.

Astist in Expansion

United Gas Limited believes in the future of Actor. They expect to see their gas service not only keep pace with the industrial and domestic growth of Actor, but to be a constructive factor in the expansion and development of this area.
