

The 1963 Pontiac has been restyled to include vertically-arranged front headlights, revamped split grille and forward slanting windshield with thin pillars. The Parisienne four-door hardtop shown here is one of 12 Canadian Pontiac models being built in Oshawa by General Motors of Canada. Pontiac features a 230 cu. in. six-cylinder that is 140 pounds lighter, has a 7 main bearing crankshaft and develops 140 horsepower. A Delcotron alternating current generator is standard on all 1963 Pontiacs.

Big Change

Halton Farmers Mechanized

Halton farmers have over seven and one-quarter million dollars invested in farm machinery and electric power. The 1961 census indicates a marked change in the amount of machinery required to operate Halton's farms. There are 710 farm operators who use 839 trucks for farm use. This fleet of vehicles is supplemented by 1,357 automobiles, also used for farm purposes. This is further supported by 1,798 tractors. Two tractors per farm are used on 368 farms in Halton.

More Combines

Harvesting methods have changed and now in Halton there are more combines used than there are threshing machines. The census shows 219 combines and 206 threshing machines. The grain binder has not disappeared as many would assume, since 419 binders are in use.

Forage harvesting is now done by heavy equipment. The pickup balers number 404, and in addition, 125 forage harvesters are used.

Electric motors are used to supplement farm labor. Electric motors of one-third horsepower and over, number 2,449.

To supplement the power machinery mentioned above, Halton farmers have invested over two million dollars in additional equipment.

The report clearly points out that farming in Halton is a high capital industry and requires a high capital investment.

Old Story

Fire Escape Routes Blocked

All too tragically familiar to the Canadian newspaper reader is this kind of headline. Multiple fire deaths last year in Canada and the U.S. reached a record high of 982 casualties. Study of 1961 reports on the subject by the fire marshals and

commissioners of the provinces confirm international observations by the National Fire Protection Association.

More than half of the victims died because the fire had made so much headway before discovery that normal escape routes were blocked. Others were trapped because no alternate escape routes had been planned.

About 85% of the fires occurred between 8 p.m. and 8 a.m., with the peak between midnight and 6 a.m. when many victims were asleep. The hour between 3 and 4 a.m. is prominent in Canadian reports. The living room was the starting point of almost half the fires, but nearly 80% of the victims were overcome in their bedrooms.

Georgetown Census Finds 10,692 People

A continuing increase in Georgetown's population finds the town with 10,692 residents, according to figures compiled by the assessment department.

The town has increased by 467 since last September and is at most three times as large as in 1953 when population was registered as 3,729. The biggest yearly increase was in 1958 when Georgetown welcomed 1,700 new residents.

Assessment Up
Assessment increased by over five per cent last year and the current figure stands at \$15,595,761.

Residential assessment showed a slight drop in the year and industrial a corresponding increase. The town's assessment percentages are now 70.87 residential, 14.87 commercial, 14.42 industrial and 12.84 farm.

Baby Sitting Short Course

Here for parent and for the sitter, are standard rules for the work:

1. The sitter should have a sense of responsibility and should like the children and preferably live in the neighborhood.
2. Instructions should be given in writing as well as orally. Where you are going and telephone number, or the name and number of someone to call in an emergency. Your telephone number and location of telephone.

Emergency telephone numbers for FIRE, POLICE, DOCTOR.
How to call the fire department.

Location of exits.

How to control the furnace or stove.

Leave a flashlight in case of power failure.
A Guide to the siter in emergency:

Get the children safely out. Even if it's cold, don't wait to dress them. Wrap them in a blanket.

Even the smell of smoke or gas is enough warning to call the fire department, or summon help. Be sure to say exactly where you are. If you can, turn on the front lights, to attract attention. Don't reenter the house. Smoke or gas from a very small fire may be fatal. If you are trapped inside, remember that the air near the floor is usually better in a smoke-filled room.

Inside, don't turn on or off any electric switches. This may create a spark, ignite gas vapors, and cause explosion.

Building Is Big Business

The following informative statistics concerning construction were gleaned from the Canadian Pocket Encyclopedia:

About half a million Canadians are now employed full-time in construction. The industry's payroll in 1961 was \$2,387,000,000. Expenditures on new and repair construction work in 1961 were estimated at \$7,039,000,000. Of this total the residential category accounted for \$1,951,000,000. Other main categories and 1961 expenditures were:

Government Departments, \$1,543 million; Utilities, \$1,379 million; Institutions, \$600 million; Manufacturing, \$442 million.	1958 146,686	1959 145,671	1960 123,757	1961 115,608
---	--------------	--------------	--------------	--------------

Value of construction in 1962 is estimated at \$7.33 billion, of which labor content will be \$2,510 million.

Spending on housing was forecast at \$2,046 million; government departments \$1,626 million; institutions \$1,379 million; institutional services \$746 million; manufacturing \$442 million.
