Acton High School News

"High School News", a column beginning this week, will carry the accounts of special events at A.D.H.S. Katharine Knappelberg has agreed to be in charge of the column, and she will be glad of assistance from any students with special interests in sports or clubs.)

On Friday, October 1, many high schoolers will be spending up to three and a half dollars on a bus tour to Stratford. The School Board has arranged for pupils to see William Shakespeare's play "Julius Caesar". The bus will leave at eleven o'clock a.m. to return sometime during the evening. It is hoped that this trip will give many more students a deeper understanding of Shakespeare's works.

If you had been an observer in the halls of Acton District High School this week, you might have noticed that about one-third of the students have on regulation uniforms. Principal of the school, E. A. Hansen, has stressed the fact that he would like to see more pupils wearing them.

Politicians are beginning their campaigns. It could be a windy fall.

R. L. Davidson is seeking horseshoe players to compete at the fall fair. "The \$75 in trophies and cash will be broken down to everyone gets something," he explains.

The district is already displaying brightly colored trees and leaves are falling onto the soggy streets. Cottagers say the colors were turned in the north by Labor Day weekend.

A typewritten piece of news came in this week reading, "Mr. So-and-so was for many years principal of the school." Well, we knew teachers have a demanding job but we didn't know it was THAT bad.

Stiffer Fines For Shooters

Sharpshooters who use insulators on municipal utility power lines for target practice face stiffer penalties.

Under a 1965 amendment to the Public Utilities Act, the Ontario Legislature has raised the maximum fine for this type of vandalism from \$20 to \$300. Convicted persons are liable for all damages arising from the offence.

Tomato Patches Hit By Blossom End Rot

Blossom end rot is a very common disorder affecting tomatoes both commercially and in the home garden. Diseased fruits develop a flattened appearance and the affected portion becomes black or brown and leathery in texture.

The cause is believed due to a combination of lack of moisture and calcium during the growing season. Irregular supplies of water are most often responsible for causing this condition.

Needs Water

Generally the initiation of blossom end rot is during the growing season and not just at the time of ripening. An even supply of water should be supplied throughout the summer.

A deep rooted plant is much less likely to get blossom end rot since it can get adequate moisture in periods of drought. It is therefore necessary to encourage deep root growth. Water only when necessary but give a good soaking at this time. Do not cultivate too close to the plant or too deeply so that roots will remain undamaged.

With the above suggestions taken into consideration the incidence of blossom end rot can be kept to a minimum.
