

PRUNING AT NORVAL

The pruning demonstration held at Norval on Wednesday, May 10th, was pronounced very successful by all who were present. Over 40 farmers took advantage of the opportunity of getting and seeing the beautiful weather. The demonstration was held on the farm of Mr. J. H. Hare, who has been successful in his pruning. The pruning demonstration was held on the farm of Mr. J. H. Hare, who has been successful in his pruning. The pruning demonstration was held on the farm of Mr. J. H. Hare, who has been successful in his pruning.

The discussion on fruit and fungus diseases led by H. H. Hare, Burlington was made more interesting by his having the latest specimens and work of these insects on insects to be examined by those in attendance. The habits and control of our worst orchard pests were taken up and from this it was shown why it is necessary to conduct orchard operations at definite times. The insects and fungus diseases have certain stages in their life history which they are most easily controlled and it is necessary to take advantage of this weak stage in order to control it. It is rather remarkable that with the number of insects and fungus diseases infesting our orchards that the three general sprays control them all.

Mr. Carroll of Drapering had made a point to have a Hand Spray as well as a Power Sprayer on hand with each a thorough demonstration was given, showing the merits and demerits of each kind of machine.

ONE DANGER OF AMMONIA

The continuous decay of vegetation produces ammonia. As many scientists have said, there is more ammonia in the atmosphere now than there was 1000 years ago, and even today the amount is increasing.

The ammonia which is in the air is not only a danger to the health of man, but it is also a danger to the health of the soil. It is a danger to the health of the soil because it is a danger to the health of the plants which grow in the soil. It is a danger to the health of the plants because it is a danger to the health of the soil.

How often, after long and dismal forebodings of a great event, the realization of a tragic event strikes the reality. This is the case with the ammonia which is in the air.

The ammonia which is in the air is not only a danger to the health of man, but it is also a danger to the health of the soil. It is a danger to the health of the soil because it is a danger to the health of the plants which grow in the soil.

JARRELL IN ENGLAND

Conditions are in need to reach the Game to Old Land.

I was strolling last week across an English lawn, put down on the celebrated formula. This was one of the most interesting of the day for me. The whole picture was an English lawn. The lawn was a beautiful green, and the grass was very short. The lawn was a beautiful green, and the grass was very short.
