**Convention of
W. M. Society**

Thursday, October 16th was a busy day in the Methodist church of Georgetown. About 90 delegates from every part of the country to attend the district convention of the Women's Missionary Society, which has assumed such proportions that it is now one of the most potent influences of the Methodist church. The morning session opened at 10 a.m. with the Superintendent, Mrs. Dales, Milton, in the chair, and was devoted to encouraging reports from auxiliaries, circles and bands and to conferences on the work, which were practical and helpful. Mrs. J. W. Karaman formally welcomed the delegates. This was responded to by Mrs. J. C. Poff, Oakville. The delegates numbering about 70 were then entertained to dinner in the Sabbath school room, by the local auxiliary, who sustained their fine reputation for the culinary art and their hospitality.

The convention again assembled at 2 p.m. to receive inspiration and education from the different speakers.

Three officers from the Hamilton Branch were present Mrs. J. A. McLachlan, Grimsby, who spoke on her department of work, Christian stewardship; Mrs. S. R. Deves, Milton, Secretary for auxiliaries, who spoke on Home Foundations, and Miss Helena Tasker of Mount Forest, secretary for Bands, who spoke on "our W.M.S. School."

Mrs. Drury of Oakville, gave a clear explanation of the Rest Fund. We were honored by having one of our heroes from the battle-front, Miss Chene, who is fighting the darkness of unbelief in our own fair Canada amongst the Ruthenians at Wastau. They have increased in number until there are 120,000 Ruthenians in Alberta alone, but the staff of workers amongst them has not increased. When will Canada and the Church waken up to their great responsibility.

A happy diversion was created when thirty boys and girls of the Mission Band, marched up the aisle and took their places in the choir gallery. After singing a chorus, they gave a splendid exercise of recitations, etc., which was much enjoyed by all.

The services were brightened by solos by Miss Hitchens and Mrs. A. E. Marshall, Milton, and Mrs. Adams, Georgetown, which were much appreciated. The Convention closed by prayer by Rev. M. Davidson and by Rev. A. Sexsmith, Oakville. Com.

Criminal Statistics

There were 707 more commitments to jails and lockups in Ontario in 1918 than in 1917, according to the annual report of the inspector of prisons and charities. There were two more committed for murder and five more for manslaughter. For crime against the person there was a decrease of ten, and an increase of 651 for crime against property. The cases of crime against public morals and decency increased by fifty, but crime against public order and peace decreased by 1,201. Fourteen fewer insane persons were committed to jails. Of those committed one-third were married and two-thirds single. In 1917 temperate persons formed 87.38 per cent. and in 1918 82.52 per cent.

Cabbages, Cauliflowers and Pumpkins for sale. Apply H. H. Heartwell, Georgetown. 26-841

Latest Type of Tourist Cars

One of the features in Canadian National Railways' Daily Service Toronto-Winnipeg-Vancouver

The Canadian National daily transcontinental train, Toronto-Winnipeg-Vancouver made its final trip from type of tourist cars as part of its equipment. The first of an order of twenty such cars in whose construction every point has been considered for the safety and comfort of passengers. This modern type of tourist car with anti-lounging devices of similar design to the standard sleeping coach, the exception being they are upholstered in leather instead of plush.

Electrically lighted throughout, all berths, upper and lower, are provided with berth lamps. New features for this class of cars that have been installed include the seats in the aisles of the car, so that when the ceiling lamps are turned out for the night light may be provided and lower berths are a great convenience for passengers when going through the car.

Phosphorus push buttons can be readily seen in the dark, should the passenger require to switch on the light or ring the bell, when the berth is in darkness.

A safety feature introduced is a device for holding down the upper berth which precludes any possibility of the upper berth closing when in use. Separate berth curtains are provided so that passengers in the upper berths will not disturb passengers in the lower.

The kitchen has the latest steel range facilities for washing dishes and locking cupboards. Passengers' food is served in the dining car. The kitchen has received special attention, and provides greater conveniences than the older type. An electric thermoplastic heating control can be so adjusted as to regulate the temperature of the car, thus preventing overheating.

This with the introduction of the daily service of Canadian National lines between Toronto-Winnipeg-Vancouver, is the added convenience of the very latest type of tourist cars for second-class passengers. Seating capacity a trim, substantial, reliable, comfortable at minimum expense.

If only half the interest and energy expended by our citizens in elections were expended to advance the welfare and advancement of our town what a change there would be.

A Business Proposition for Farmers

WE want you to size up Delco-Light as you would a new farm hand before you hired him.

Will Delco-Light do a good day's work on the farm every day? Will it cost much to keep? Will it earn money for you? Will you get along pleasantly with it? Over 75,000 Delco-Light users have answered these questions for themselves and for you.

Delco-Light gives them all the electric light and power they need.

As a result—

They do chores before daylight or after dark, because house and barns are well lighted.

They have stopped working small machines by hand—milk machine, churn, separator, grind-stone, washing machine, fanning mill, water-pump. They have running water wherever it is needed. They no longer hamper themselves with a lamp or lantern while working. There are no lamps to clean and fill. The ironing is done by electricity.

All this means time saved for every member of the farm family. It means more time spent at money-making work. On some farms it means doing away with hired help.

And the money now spent for coal oil will operate a Delco-Light. Four times as much light from a gallon of coal oil is the record of Delco-Light over oil lamps. A few cents a day for all the electric light and power you can use.

Where there is a boy on the farm he looks after Delco-Light. A few minutes each week is all the attention it needs. Note these exclusive features of Delco-Light construction. They insure care-free, long-lasting service for you.

It is direct-connected. There are no belts to slip, break or be replaced.

It is self-cranking. Pressing down on a lever starts the engine and it stops automatically when the batteries are charged.

It is self-cooled. There is no water to carry, to freeze, or to boil away.

There is only one place to put oil. There are no grease cups.

A simple mixing valve regulates the fuel supply. There is no complicated carburetor. Ball and roller bearings cut down friction and increase efficiency.

Thin-plate batteries are long lasting.

You can see that on every point Delco-Light is a good business proposition—that it pays for itself. It does a lot of work for you. It saves you time. It gives you time for money-making work. It costs little to operate. It is easy to look after.

different ways. The fuel saving alone amounts to about \$460.00 per year, as follows:

When we formerly used 85 gallons of gasoline per week, at 25c. per gallon (\$13.75) to operate the milking machine and pump alone, we now use 35 gallons of kerosene per week at 14c. per gallon (\$1.00), which is a net saving of \$8.85 per week, or \$460.20 per year.

Also, in addition to this, we are lighting four houses, horse barn and cow barn and doing the washing and ironing.

Another instance of saving is that we save the time of one man (4 hours a day) handling lanterns alone in our cow barn. We figure this a saving of 20c. per hour, making \$1.20 per day, \$36.00 per month, or \$432.00 per year.

(b) "I consider my purchase of a Delco-Light plant one of the best improvements I have made on my farm."

DUNCAN MARSHALL,
Minister of Agriculture, Alberta, Canada

(c) The plant has not given us a bit of trouble; the fuel cost has been less than \$2.00 per month.

(d) Any child can run it and it lasts any of your coal-oil lamps for light and safety.

(a) DELCO-LIGHT has made it possible for us to do without one man, whose wages and keep amounted to \$30.00—he would cost us more now.

By operating the above mentioned appliances Mrs. Park has been so relieved from her ordinary household duties that she is able to spend a great deal of her time helping to care for the milk, and we are now able to do all of our own work, which has solved the hired help problem for us, and securing help nowadays is the farmer's greatest problem.

(b) Delco-Light saves us every day about one hour doing the chores around the farm—this would mean for my son and I about 720 hours a year at 20c. per hour, which is, figuring very low, about \$144.00 saved.

(c) The time and labor saved every week over the old way is as follows:

Cream Separator	6 hours
Washing Machine	2 "
Flat-iron	2 "
Pumping water	6 "
Vacuum Cleaner	4 "
Power Stand on Fan	4 "
Mill and various things	2 "
Total	25 " per week

(d) I save about 2 hours a week on the washing, and 7 hours a week on separating. It saves one man about 4 hours to clip my team. On churning it saves my wife 3 hours a week. It saves about 20 minutes on grinding our sausage per hundred pounds.

(e) We figure that it has saved us in way of labor for pumping and milking not less than \$1,200.00 during the two years. The plant requires very little attention and only about \$2.00 per month for fuel. We could not afford to buy a new one each year and still be ahead on labor and satisfaction, aside from the advantages of having the lights, of which we have 50 in the house and barns.

(f) I light my residence, a house of fourteen rooms and one of five, my garage, two barns and a workshop. I operate an automatic water pump, maintaining a pressure of 40 pounds for the extra water supply of the place, including hose for watering the garden. We have a 1/2 horse power Delco-Light Power Stand, which is used for burning and making the butter, turning the griststone and running the washing machine. I expect to attach it later to the cream separator.

(g) This plant is paying for itself in several

Before acquiring a Delco-Light I could not rest good at night for fear of children lighting a match and thereby possibly setting fire to something. Now I sleep like a log because all that is necessary for the children to do is to press the button and the light is there, and a most excellent light at that. It is much cheaper than Coal-oil and no danger of upsetting a lamp.
