BUILT BETTER
than Cars that Cost More-

A CAREFUL analysis of the construction and complete equipment of the Light-Six will convince you that it has no duplicate in value in the light car class.

For instance, the machining of the crank shaft and connecting rods on all surfaces is a manufacturing practice that is found only on the costlier cars.

This particular operation is mainly responsible for the fine balance of the Light-Six motor and its remarkable freedom from vibration at all speeds. It also has an important bearing on the wearing quality of the car and on its long-lived, dependable service.

The exceptional values in the Light-Six are possible because practically every part that goes into the car is manufactured complete by Studebaker. Parts-makers' profits are largely eliminated. Important savings through better methods and bigger volume permit greater value to be given the buyer.

From the standpoint of shrewd investment you should find out why the Light-Six offers you so much more for your money in performance, service and economy.

This Is a Studebaker Year

STANDARD EQUIPMENT
Includes cowl ventilator operated from the instrument board; cowl parking lights at base of windshield; inside and outside door handles; large, rectangular plate glass window in rear curtain; ignition lock and a thief-proof transmission lock, reducing the rate of insurance to Light-Six owners 15 to 20 per cent; and cord tires.

You get all the cream with a De Laval

Not every separator is designed so that it will get all the cream. But there is one machine that can always be depended upon to skim clean—the De Laval.

A De Laval user gets more cream from the milk of each cow, gets longer service from his machine, and spends less time turning and washing it. Ask any of them.

Wouldn't you like to know more about the De Laval? Step in.

De Laval butter has won at every meeting of the National Buttermakers Association, with one exception.
