

DOBT QUIT

When things go wrong, as they sometimes will, When the road you're treading seems a slip-slip hill, When the funds are low and the debts are high, And you want to smile, but you have to sigh, When care is pressing you down a bit, Rest if you must—but don't you quit!

NEW ONTARIO LOANS

How the Farm Loan System Helps the Northland.

Many Settlers Need Financial Encouragement—Land Values Give Good Security—Systematic Inspection is Practiced in Making Loans.

(Contributed by Ontario Department of Agriculture.)

"Money is the greatest need of the whole Northern district at the present time."

This is one striking conclusion submitted to the Agricultural Development Board by one of its staff inspectors after a general and detailed survey of two or three important sections of New Ontario early this summer.

Engines and Cars await Grain Rush

Preparation is being made for the anticipated movement of grain from the northward during the coming season. The management of the Canadian National Railway has been busy in getting into the maximum efficiency all of the best order equipment on western lines. 7000 staffs of men were set to work in the two great shops and yards, and all the locomotives and freight cars headed in for treatment.

The locomotives ready to move the crop have an average length of 65 feet. Some conception of the enormous power represented in these iron steeds may be gleaned from the statement of fact that among them to be equal to the Mikado, capable of drawing 4500 tons, the hauling capacity of these locomotives would be 121,533,333 bushels of wheat if all the engines were hauling capacity trains at the same time. In other words, the motive power provided by the Canadian National for moving the crop, is equal to the task of hauling about one-third of the total crop of Alberta, Saskatchewan and Manitoba at once.

The history of the preparation starts this early in the part of the Management to ease the unemployment situation last winter, and at the same time accomplish some useful purposes. The management conceived the idea of putting into the maximum efficiency all of the best order equipment on western lines. 7000 staffs of men were set to work in the two great shops and yards, and all the locomotives and freight cars headed in for treatment.

The locomotives ready to move the crop have an average length of 65 feet. SUGGEST AND FAILURE

In Raising Young Pigs for Real Profit.

Many Paragraphs Full of Facts About Raising Them—Fertilizers for Fall Wheat—Pregnant Nones Require the Best of Care.

(Contributed by Ontario Department of Agriculture, Toronto.)

Causes of failure and success in the feeding of young pigs are pointed out in the following article: Causes of Failure in Feeding Young Pigs.

1. No one on hand to see that everything is right when pigs are born.

2. Excess of fat in mother's milk.

3. Cold, damp, uncomfortable quarters.

4. Intestinal parasites.

5. Shortage of sweet skim milk at weaning time.

6. Ration out of balance.

7. Ration composed of unsuitable grains.

8. Lack of mineral matter in food.

9. Housing conditions unsuitable.

10. Diseases—hog cholera, etc.

11. Neglect to alter male pigs at proper time.

12.—Neglect to supply ample food for proper development, regularity.

13. Working with poor stock.

14. Treating the pig as a general scavenger.

Success in Raising Young Pigs:

1. Mother's milk plentiful.

2. Clean, dry, bright, comfortable quarters.

3. Practice of disease preventive measures.

4. Ample yard room, protection from hot sun and flies.

5. Ample clean drinking water and wallow during hot weather.

6. Mineral matter and conditions supplied during early weeks on the soil conditions are not available.

7. Working with well bred, vigorous stock.

8. Ample supply of green forage, such as alfalfa, red clover, sweet clover, rape and blue grass. L. Stevenson, Sec. Dept. of Agriculture, Toronto.

Fertilizers for Fall Wheat.

Fall wheat must have a strong well-rooted plant to withstand the winter. To insure this there should be an abundance of all kinds of available plant food in the soil. The two constituents the wheat plant has the greatest difficulty in getting out of the soil are nitrogen and phosphorus.

If the land has been manured and summer fallowed, or if a clover sod has been ploughed down, there will probably be no need of purchasing a further supply of nitrogen and an abundance of available phosphorus will probably be sufficient. If, on the other hand, the wheat is to follow a corn or if there is any doubt about the soil, it will not develop a good top, then some form of readily available nitrogen fertilizer may be used.

Damages Against County

Owing to a defect in a county road in Hastings County, Dr. Clinton and his daughter, a pianist, were injured when their motor car compassed and went into the ditch. Miss Clinton had her arm broken and sustained other injuries which will prevent her continuing her profession. The county was sued and the Clinton was awarded \$4,000. She took the case to the Court of Sessions Appeal at Toronto and there was awarded damages of \$10,000, and all costs against the county, etc.

In The Public Eye

NEW YORK, N.Y., Feb. 14.—(AP)—The case of the woman who was awarded \$10,000 damages for injuries sustained when her car was thrown into a ditch by a defect in a county road in Hastings County, Ontario, was taken to the Court of Sessions Appeal at Toronto today.

The woman, Miss Clinton, who is a pianist, had her arm broken and sustained other injuries which will prevent her continuing her profession. The county was sued and the Clinton was awarded \$4,000. She took the case to the Court of Sessions Appeal at Toronto and there was awarded damages of \$10,000, and all costs against the county, etc.
