

SIGNS OF SPRING!

Signs of spring are all around. In the air and on the ground. Hens are cooking on the run. Marble playing has begun. The rattle of the ancient fiver is heard again. The torpid liver follows against boiled beans and pork.

Terra Cotta

A number from here enjoyed a social dance at Mr. and Mrs. J. Marchant's on Friday evening. Mr. and Mrs. B. Parr of Guelph are visiting with friends here.

Evangelistic services are being held every night in the Methodist church here this week. Rev. Mr. Douglas, pastor, is conducting the services.

—If a man spoke to his wife only once a month, or every two months, she would recognize his voice. But great makes, what if she recognized his breath.

—Two good used road cars, one heavy teaming wagon gear good as new; one good democrat, all will be sold cheap.—J. N. O'Neill & Son, Georgetown.

—So live in your town that you will not merit the label bestowed by an old-time philosopher: "That man is about as much use to a town as a last year's calendar."

A considerable revenue might be derived from a tax on impromptu speeches at Ottawa and the provincial capitals. Thousands of words are wasted on the desert air.

Every TWO minutes SOMEBODY'S House Burns. Hours may be next and it takes only TWO MINUTES to protect yourself by phoning to—

MAKING FARM CHEESE

The Manufacture of Cheese in the Home Dairy.

Preparing the Milk—The Work of Coagulation—Cutting and Milling—A Home-Made Press—After-Care of Cheese—Co-operation Will Win.

Contributed by Ontario Department of Agriculture. For every nine or ten pounds of cheese required, use 100 pounds of milk (10 gallons). Take the fresh morning's milk and mix it with the night's milk in a vat, or some clean vessel suitable for holding milk.

Use one teaspoonful of rennet for every 25 pounds of milk. First dilute the rennet with a pint of cold water, and then mix it thoroughly for about three minutes.

Cover the vat until coagulation takes place, which will be in about twenty minutes, depending on the ripeness of the milk. When the curd breaks clean across the edges without any curd remaining on it, it is ready to be cut.

For cutting, regular curd knives are best. Use the horizontal knife first cutting lengthwise of the vat, then cut both lengthwise and crosswise with the perpendicular knife. This gives small cubes of even size.

After the curd has been cut, it should be gently stirred with the hand, or with a small wooden rake for ten minutes before applying heat. Heat the curd 92 degrees Fahrenheit, taking about thirty minutes to do so.

Continue stirring until the curd is ready for salting; usually about two and one-half to three hours from the time the vat was set. When the curd becomes firm and springs and falls apart when a handful is pressed together, it is ready to have the whey removed.

Drain the whey from the curd over once, then pile it evenly at one end of the vat and cover it with a heavy cotton cover. In about twenty minutes the curd will be well matted when it should be cut into blocks about four inches square. Turn the blocks about every twenty minutes until the curd comes laxy. This is usually about one and a half hours after salting.

Knife may be used in place of a curd mill. Cut the curd into strips about the thickness of your finger, salt well, and apply salt at the rate of one ounce for every twenty-five pounds of milk.

Shrink the salt over the curd, mix it thoroughly and when the salt is dissolved the curd will be ready to put in press at between 80 and 84 degrees.

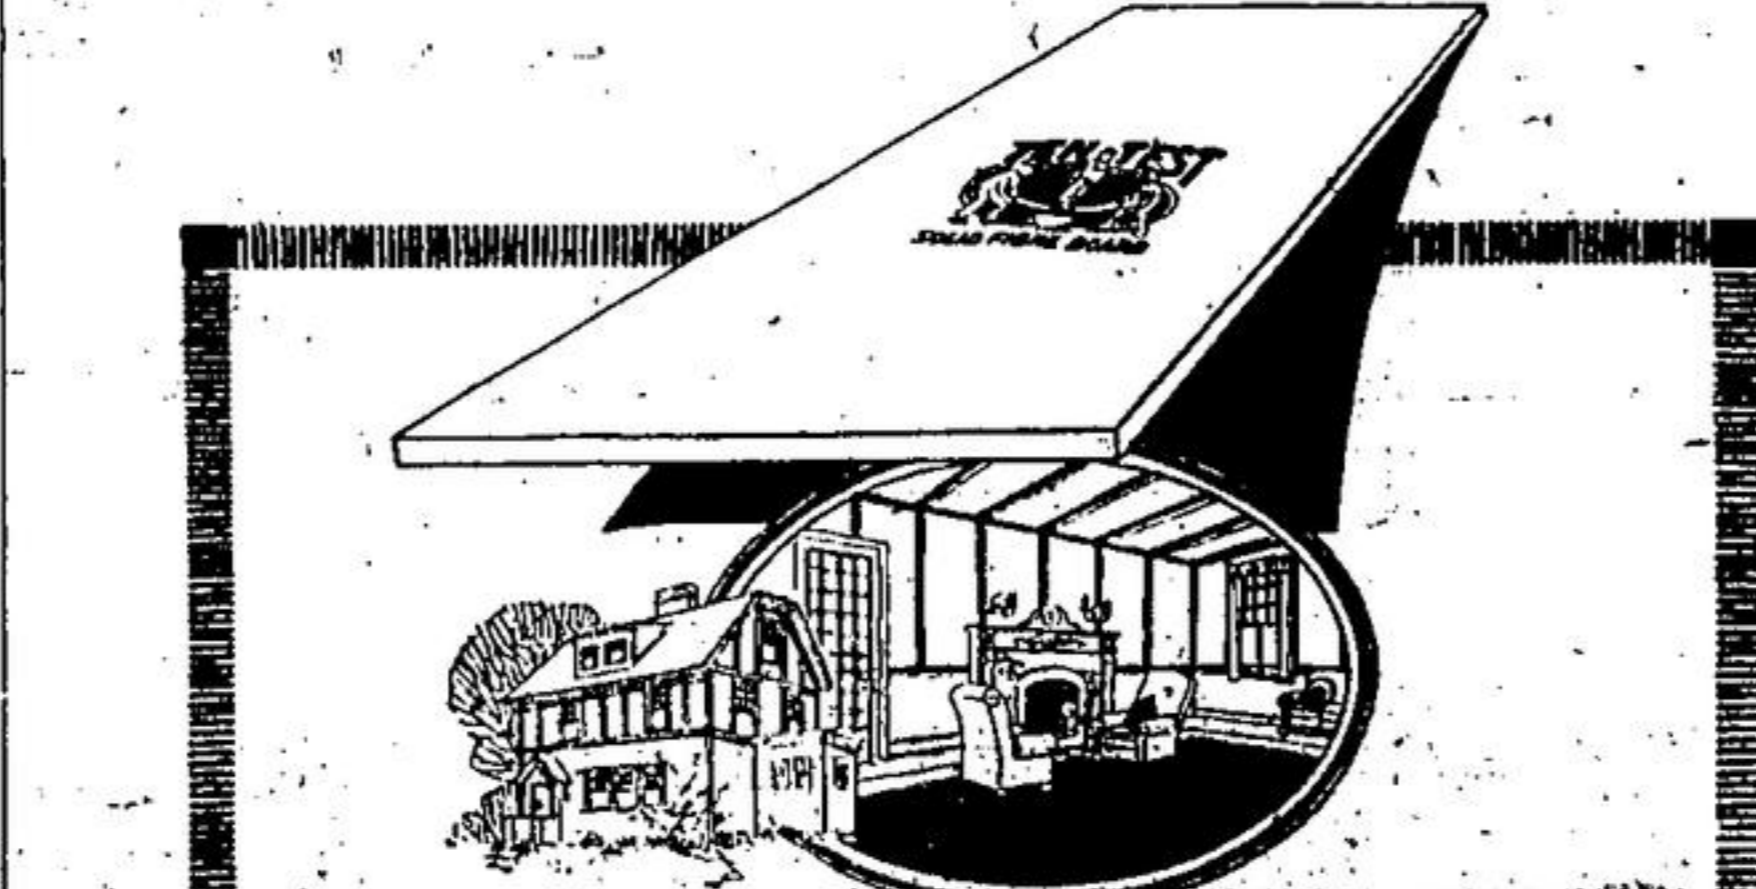

The cheese hoop, or hoops, should be made of heavy iron with two handles on the outside. A suitable size for home use would be seven and eight inches in diameter and twelve or fourteen inches high.

Place a piece of cotton at the bottom of the hoop, as a temporary cap, then put the cheese cloth bandage inside the hoop. Carefully pack in the curd, fold over the end of the bandage, place over top a piece of cotton similar to the one at the bottom, put on wooden follower, and put in press.

A Home-Made Press. If a press with a screw is not available, use a lever press. Take a piece of scantling ten or twelve feet long, for a lever. Place the cheese hoop on a strong box about three feet from the wall. Nail to the wall a piece of scantling and under it put one end of the lever. Put a block of wood on top of the follower for the lever to rest on. A pall containing stones or iron may be used for the weight. Do not apply full pressure at first.

In three-quarters of an hour the whey may be taken from the press, the bandages wet with hot water, pulled up smoothly and trimmed neatly, allowing one-half an inch to lap at the ends. Cover the ends with circles of stiffened cheese cloth; over that place a piece of cotton dipped in hot water and set under the press until the following morning, when they should be turned in the hoops and pressure continued a few hours longer. After removing the cheese from the press, place them in a cool, dry cellar to ripen.

After Use of Cheese. Turn the cheese end for end on the shelf every day for a month and afterwards occasionally. These cheeses will be ready for use in about six or eight weeks.

FOR OUTSIDE WALLS—FOR INSIDE WALLS with Stucco, Wall Paper or Paint

DECIDE what you wish your walls to be, then check up your wishes with the ten tested features of Ten Test Solid Fibre Board. You'll find it fulfills your every desire.

Exterior Walls with Stucco applied over Ten Test Solid Fibre Board permanently defy winter's winds and snow, and summer's sun and rain. Ten Test Solid Fibre Board resists moisture and helps to keep your rooms at comfortable temperature all year around.

Interior Walls and Ceilings with Ten Test Solid Fibre Board papered, painted or paneled, provide rooms of dignified richness and restful charm. Walls that stubbornly resist hard knocks; ceilings that will not sag, crack nor warp.

Ten Test Solid Fibre Board is so lastingly beautiful it is used in the finest homes. It costs so little to buy, apply and maintain, it is used for modest homes as well. Twice as thick as other wall boards—it has double the strength and lasting qualities.

Write for the free book which gives in detail the ten tested features of this building board, you will find the book full of new building ideas.

\$200 to \$400 Saved on this Studebaker Light-Six

Here is a car priced at \$1,455 which, built by ordinary methods, would cost you from \$200 to \$400 more.

It is in scores of ways the leader of its class. No rival car compares in the value that it offers.

It is built by the largest maker of fine cars in the world. By a maker who builds 150,000 quality cars per year. So such major costs as engineering, overhead, dies, etc., are divided by 150,000.

It is built in a model plant, with up-to-date machinery. And the savings go to you in values none can match.

Some extra values. Same steel as we use in the costliest cars we build. On some we pay 15% premium to makers to get them exactly right.

Designed and built under an engineering department which costs \$500,000 yearly. Each car gets 32,000 tests and inspections in the making.

The bodies are beautiful creations. The finish and coach work show the final touch.

Table with 3 columns: TOURING SIX, SPECIAL SIX, BIG SIX. Lists car models and prices.

J. N. O'Neill & Son Georgetown Ontario THE WORLD'S LARGEST PRODUCER OF QUALITY AUTOMOBILES

Get their orders now

Think of the farmers who will want timothy, clover, wheat, rye, oats (seeds, potatoes for planting; roofing or paint for the barns; wire for the chicken runways or pig pen—a hundred things.

If prices are favourable, get their order for them now, by Long Distance, and hold the goods, if necessary.

When the roads are bad farmers doubly appreciate your telephoning them. The first merchant who does a stand a mighty good chance of getting their orders. Try a dozen calls. The results should average very well.
