## READY FOR A |FULL DATE

Down on the farm 'bout half past I slip on my pauts and sneak out the door; Out to the yard I run like the dick

To milk ten cows and feed the chickens. Clean out the barn, curry Nance and Jiggs. Separate the cream and slop al

the pige, Work two hours and then eat like

And by book, I'm ready for a full day's work. Then grease the wagon and put on the rack,

grain sack. Hitch up the borses, hustle down Must get in the hay for it looks

But look over yonder, sure as I am oughly drain a whole area. But the Cattle's on the rampage, cows are in the corn:

Start across the medder, run a mile Heavin' like I'm wind broke and get wet clean through; With my joints all a-squeakin' and muscles in a jerk,

I'm fit as a fiddle for a full day's work. Soon get to pitchin' the hay on the

Lightning gets to flashing, thunder gives a crack,

I don't care, don't even frown, Rest fixing the fence while the rain comes down:

Just get to resting, then for rec Nance got saraddle the barbed wire fence:

Clothes all wet, so slip off my shirt And by heck, I'm ready for a full day's work. Work all year, didn't make a thing,

And I've loss money now than I had last spring. Now, some people say that there ain't no hell. But they never farmed, so they

can't tell. When spring rolls 'round I'il take another chance.

While the fringe grows longer on my panta, Give my 'spenders a bitch, belt another jerk,

Bonds and Investments

year's work.

# TILE DRAINING

It Will Pay to Underdrain the Average Field.

Approximate Cost of Tiling - Loans Provided for by Tile Drainage Act. How Underdraining Increased the Yields of Grain, Alfaits and Hay-Within Reach of All. (Contributed by Ontario Department

Just how far drainage can be carried and made to pay has always been an open question with farmers. Nearly every farmer bas seen swamp area, a low, flat, "sour" field or odd corner of his own or his neighbor's farm tiled and made into valuable productive land, and he is quite ready to agree that possibly for such high-priced crops as opions,

celery, tomatoes, tobacco or sugarbests it might pay to pretty thoridea of giving as careful treatment to land that year after year gives fairly average yields of ordinary crops-grain, corn, potatoes or bayespecially at present prices for these commodities, looks situgether out-of reason. Besides, it has been argued, it was all very well when wheat was bringing two to three dollars a bushel to think of drainage, but with dollar wheat scarcely meeting the cost of production, it looks foothardy to throw good money after bad.

Approximate Cost of Tiling. The important cash items to be met n tile drainage are the purchase price of the tile; the trench digging and the laying. A fair estimate of Starts in raining and it rains like these costs in Western Ontario at the present time gives \$30 per thousand for three or four-inch tile and thirtyfive cents per rod for digging and laying. At these rates an acre of land tiled at regular distances between lines would cost:-

\$111.41 per acre at 20 feet \$2.70 37.70 At the interest rates and according to the terms under which loans are made to larmers under the Tile Drainage Act, the total cost of such drainage, both principle and interest, could be refunded to the investor in twenty equal yearly payments of:-

\$5.70 per acre tiled at 10 feet This means that in order to meet the cost of draining fields at these distances these various amounts would need to be found through in-

creased crops grown on the land so Underdraining Improves Fields of And by beck, I'm ready for a full Based on average production per acre and average prices received by

farmers in this Province in 1921 and 1922, it would take two and onehalf bushels of fall wheat to meet the cost of tiling at sixty feet apart; only one and one-half bushels to tile it at one hundred feet apart; and oven at twenty feet apart it would take an increase of only seven and oue-half busheis. . The limits to which drainage might

be carried profitably in growing wheat can be seen when you read results such as the following: ---"Eight acres of drained land gave 45 bushes of fall wheat per acre; eight acres undrained land gave 25 bushels per acre." This result was on adjoining land and in the same year.

Bariey on drained land yielded 50 bushess per acre and nearly a ton of straw, while that on undrained 30 bushess and half a ton of atraw." "My usin un urained land yielded 50 cushes per aure, and those on the un-trained 38."

Yields of Alfalfa and Hay Increased. The question of economically underdraigus, tiny belos is met by the ing at 60 feet, while a more 190 pounds will meet the cost of drains at 100 feet, and you-a not unusual increase over the average yield-will take care of even arainage at 20 feet. With ordinary mixed clover and hay half a ton increase will meet the cost of a to-foot system, while only ingreases of 334 and 200 pounds will take care of the 60 foot and 100 foot lines. When it is remembered that drainage permits the bringing into the regular rotation of many permanent hay and pasture fields, glying opportunity for the successful growing of our neavier yielding cultivated grasses, the possibility of securing the required increased

Lonne Made Under the Tile Drainage Tile drainage is within the reach of all through the loans made poshible by the Tile Drainage-Act. It is. one of the safest and best paythg investments the farmer can make. It to common for a system of tile drains to pay for itself in three or four years, and often in much less time than that. In other words, it is an investment that will pay 10% to 35 % on every dollar invested, over and over, year after year, turning a mquer losing or no profit crop into side of the ledger .- V. O. Lowell District Supervisor, Chatham.

amounts to meet the grainage costs are not such as to cause any worry.

Give Pigs an Early Start A ply once stunted is not very ap to recover from it sufficiently to make the gains required for profit. seep the youngsters growing right alung. # Neptunite\_The New Varnish Perfected after Two and a Half Years of Research

When a varnish can be subjected to the "Hot Iron", we think you will agree it is about as perfect a varnish as can be made. -A wet towel was placed on the surface of a table varnished entirely with Neptunite and ironed with a Hot Iron, until it was bone dry. This test was made in addition to the well known "Boiling Water" "Hammer", "Ammonia", "Ico, and "Water" tests—from all of which Neptunite of its ingredients—gives that deep, instrous, smooth finish so much desired by particular people and by reason of its

You will gather from this that hot dishes, large production and durability is very accidents, the wear and tear of feet or economical.

We are exclusive agents for all four Neptunite Varnishes; Neptunite Floor for Hardwood Floors; Neptunite Spar for Interior and Exterior Use; Neptunite Interior for Standing Woodwork; and where a dulled rubbed finish is desired—Neptunite Kubbing.
