

LET SOMETHING BE SAID

When over the fair fame of friend or foe The shadow of disgrace shall fall instead Of words of blame, or proof of truth and so, Let something good be said, Forget not that no fellow-being yet May fall so low but love may lift his head, Even the cheek of shame with tears is wet If something good be said, No generous heart may vainly turn aside In ways of sympathy, no soul so dead But may awaken strong and glorified, If something good be said, And so I charge ye, by the thorny crown, And by the cross on which the Saviour bled, And by your own souls' hope of fair renown, Let something good be said. —James Whitcomb Riley.

Our business is growing every day. Buy your boots where you can get them at factory price. Our customers know us and no matter how many shoe stores come to Georgetown they can come to us with every confidence that they will get better and cheaper boots in my store. I learned the shoe trade in Hillsbury tannery and know what factories to buy good boots from to give my customers satisfaction. The old reliable MacPherson boots, also Dayfoots and all other makes. I have enlarged my store and now have three show windows, one children's one women's and one men's. The model woman's shoe at \$2.50, children's 40c to 75c, men's \$3.00 good working boot. All tips down free and heels straightened. Repairing while you wait. We have no opposition in low prices nor overhead expense. —J. Bonoy, Main St. Georgetown. 5-4-29

THE HANDLING OF MILK

A Column Dealing With Milk and Its Products

Pasteurization — Preservatives — Commercial Buttermilk — Cheese From High and Low Testing Milk. — Milk From Sweet Clover — Gelatin and Bacteria in Ice Cream. (Contributed by Ontario Department of Agriculture, Toronto.)

Following are summaries by the Department of Extension of the O.A.C., Guelph, of work done in that institution with milk and some of its products: Value of Pasteurization. To test the value of pasteurization as an aid to keeping milk in a safe condition for a long period, a study was made by the Dairy Department of the Ontario Agricultural College during July of 1923. Similar samples of raw and pasteurized milk subjected to a temperature of 53° to 54° F. gave results as follows: The raw milk did not keep for twenty-four hours, while the pasteurized milk was sweet at end of third day. Similar samples of raw and pasteurized milk held at 37° to 43° F. gave the following results: The raw milk kept sweet for less than forty-eight hours, while the pasteurized milk was still sweet and in good condition at the end of two weeks. The trials show the great value of pasteurization in the field milk trade and the necessity of low temperatures for holding the milk after pasteurizing.

Commercial Buttermilk. In the Dairy Department of the Ontario Agricultural College during the past season a few lots of commercial buttermilk were made by either pasteurized skim-milk, or the buttermilk from churnings of pasteurized cream, not ripened before churning. To the milk was added 30 per cent. water, 6 per cent. culture and one-half ounce of salt per one hundred pounds of milk. This was allowed to stand until the next morning when it was stirred and the whey separated. The curdled milk was then poured into the churn and churned for about twenty minutes. This made buttermilk that was in good condition, had good flavor, was smooth, and did not separate. After churning one lot for fifteen minutes, a small amount of cream was added. The churning was then continued and in nine minutes the cream had churned into fine butter granules which gave it the appearance of "old-fashioned" buttermilk and was well liked.

Comparative Test From High and Low Testing Milk in Cheese-making. Investigations carried out by the Dairy Department and the Chemistry Department of the O.A.C. College with low and high testing milk used in the manufacture of cheese gave results that are interesting to cheese factory patrons. The low testing milk contained 12.01 per cent. solids and 4.74 per cent. fat. The high testing milk contained 13.29 per cent. solids and 5.83 per cent. fat. Not very much difference between the two samples. The yield of cheese per 1,000 lbs. of milk was 15.15 lbs. from the low testing lot, and 15.34 lbs. from the higher testing lot, or nearly six pounds of cheese more per thousand pounds of milk for a very small increase in the percentage of fat and solids. This is further evidence of the injustice of paying for milk on the basis of weight only and not considering the fat and solids content of milk when buying money among patrons of cheese factories.

Milk From Sweet Clover. The Dairy Department of the Ontario Agricultural College made for lots of butter during July when the cows were pasturing on sweet clover. The butter was made by the traditional method of churning whole cream, and again after holding in storage, but none of it had a flavor that could be attributed to sweet clover. These results are similar to those obtained in 1922. Gelatin and Bacteria in Ice Cream. With the great increase in the consumption of ice cream and the development of the ice cream manufacturing business various schemes have been evolved to take care of the demand in a way profitable to those manufacturing and selling this food. In making examination of various samples of gelatin sent to the Bacteriology Department of the Ontario Agricultural College some samples were found to have bacterial content as high as 900,000 per gram. Wholesome ice cream cannot be made if low grade gelatin is used in its preparation.

As a rule sweet clover should not be cut for hay before the pods begin to turn yellow. The best quality is produced and the hay cures most readily if the vines are cut when most of the pods are full grown and a considerable number of them are mature. At that stage of growth none of the best hay varieties will have dropped their leaves and the plants will have practically attained their full growth.

BUY K & S Tires Good as any. Better than many. Your used tires and tubes repaired. Everything guaranteed to give service. Phone 20

WE SELL TO SATISFY

Here and There

British Columbia's agricultural production last year increased in value \$4,000,000 over the 1922 period, figures compiled by the provincial Department of Agriculture show.

A steady increase in the volume of wheat exports from Canada is noted in the monthly statement just issued by the Dominion Bureau of Statistics. In April, 1924, 6,095,465 bushels in all were exported, as against 5,143,304 in April, 1923.

It is anticipated that hundreds of thousands of visitors to the beautiful Annapolis Valley, Nova Scotia, will help to celebrate the famous fruit-district's "Apple Blossom Sunday," which falls on June 8th this year. The entire orchard belt, extending from Annapolis Royal to Windsor, a distance of about 80 miles, is always white and pink with blossom in the first part of June.

Hon. Honoré Mercier, Minister of Lands and Forests, speaking of arrangements made in the province for forest protection this year, stated: "I greatly believe that the way the service is organized and with the good-will manifested by all classes of the community, who realize the importance of protecting your national domain, the year will be a good one and the losses reduced to a minimum."

The report of the statistician to the Department of Grain Commission for April, recently issued, records the heaviest spring great lakes shipping season on record. The report says that there are indications that all the surplus of the western-crops will be moved as fast as transportation facilities permit, as export purchases are to be heavier than usual and all ocean tonnage out of Montreal for May and June has already been engaged, as well as part for the July loading.

Something new in the way of all-way equipment is the new storage battery car now operating over Canadian Pacific lines between Galt and Hamilton. The car attains a speed of 35 miles per hour and makes two trips a day in each direction. It has three compartments: general, passenger, smoking and baggage, is of all-steel construction and will accommodate 50 passengers. The service is reported to be giving every satisfaction to the people of the district. Interviewed in Vancouver as to the success of the round-the-world cruise completed on May 24th by the "Empress of Canada," E. W. Beatty, said: "To gauge the success of the 'Empress of Canada's' round-the-world cruise one has only to ask the passengers their opinion of the entire trip. I spoke to several while cruising from Victoria and without exception they all expressed their complete satisfaction with the ship, its officers and the arrangements made and carried out since the day she left Vancouver, almost five months ago. That is good enough for me. It is simple demonstration that the Canadian Pacific can successfully conduct cruises in competition with any organization in the world and maintain that company's standing as a credit to Canada. The 'Empress of Canada' has carried the Canadian flag over the seven seas and into most of the world's great ports and the publicity work she has done for Canada in the various countries touched should not be lost sight of. As one result of the 'Empress of Canada's' already overland and fitted with a view to providing the greatest possible comfort for her passengers. Once a week she will be in Vancouver and will be in this year will greatly help in enabling us to make these cruises even more successful than those recently completed."

To Sell Summer Residents City people in the country for the Summer can be sold groceries and meats by Long Distance. Some grocers (and butchers) call up out-of-town customers once a week and get their orders. Deliveries are made by truck or express. Some grocers arrange with their customers before they leave town, to give this service. They say they can well afford to pay for Long Distance calls on weekly orders. Let us work out with you a plan for the surrounding district.
