Save Fuel in Cooking

Boils in 5 minutes **Boils in 8 minutes**

The illustration shows an interesting test you should try in your own kitchen. It proves the superiority of good-enamelled ware for cooking purposes. Take an SMP Enamelled Ware Sauce Pan, and a sauce pan of equal size made of aluminum, tin or other metal. Into each pour a quart of cold water. Set both sauce pans over the fire. The water in the SMP Enamelled Ware Sauce Pan will be boiling merrily in about five minutes, while the water in the all-metal sauce pan will come to the boil in about eight minutes—three minutes longer. Save fuel in cooking. Use

SMP Enamelled WARE

"A Face of Porcelain and a Heart of Steel"

Three Sides: Enamel Ware, two sides of porcelain enamel and one side of aluminum. Enamel Ware, three sides, light blue and white inside and out, with Royal Blue outside. Enamel Ware, three sides, pure white inside and out, with Royal Blue outside.
