The Duke de Alba, 17th of that ame and 10th Duke of Berwick in the British nobility, together with the Duchess of Alba and several other distinguished Spaniards, is touring Canada over Canadian Pacific lines. Their itinerary includes Niagara Falls, Toronto, Banff. Lake Louise, Vancouver and Vic-

Transformation for the better wrought among the Eskimos in the last 25 years is almost unbelievable, so Bishop I. O. Stringer, of the Anglican diocese of the Yukon, reported on a recent visit to Edmonton, Alta. The Bishop attributes this improvement to the influence of the missionaries and the Royal Canadian Mounted Police.

amined with interest by the members of the British Association for the Advancement of Science during their recent visit to Calgary, Alta. This process has become worldfamous ever since the experiments conducted at the local Imperial oil refinery proved so successful.

Thousands of Belgians are waiting to cross the Atlantic to Canada as soon as the Dominion can assimilate them, it is reported by author--ities in touch with the situation, Belgium's interest in Canada is further evidenced by the visit to the Dominion of Louis Strauss, veteran member of the diplomatic corps and member of the Belgian Parliament for Antwerp, who, as guest of E. W. Beatty, Chairman and President of the Canadian Pacific Railway, is touring the country studying economic conditions with a view to stimulating Belgium immigration

In response to the appeal of the University of Bishop's College, Lennexville, Que., for \$500,000, to meet present needs, the Canadian Pacific Railway has supported the plea by subscribing \$15,000 to the fund.

Canada will soon be the meeca of many moving picture directors, according to Herbert Brenon, producer for Thomas Meighan, who recently arrived at Banff to film the big outdoor somes for James Oliver Curwood's "The Alaskan."

The fish catch of the world approximates \$1,000,000,000 a year in Its cost to the consumer, of which \$780,000,000, goes to those who har-vest it, statistics furnished by the United States Fish Commission de-

The value of the tourist traffic to Canada is proved by figures sup-plied by the Parks Department of the Dominion Government, which show that the enormous sum of \$185,000,000 was spent by tourists in this country in 1923. This rep-resents the Dominion's fourth largest source of foreign cash income.

On her arrival at Quebec, June 14, the Canadian Pacific steamship "Empress of France" broke the record for the fastest time made between that port and Southampton, England, from which she sailed, having maintained an average speed of over 19 knots. This vessel also holds the record for the run between Quebec and Liverpool.

Arrangements for the Pageant of Empire, to be held at the British Empire Exhibition July 21-August 30, are now rapidly completing. Episodes showing the history of Canada and the other Dominions as well as of the Mother Country from the earliest times to the present day are being organized with the assistnoce of prominent residents of the Dominion now in London.

Hon. J. E. Perrault, Minister of Cofonization, Mines and Fisheries for the Province of Quebec, on his return from a recent extensive trip to the Temiscaming district of that province, stated that there were over 2,000 prospectors exploring the gold-fields of Quebec and at least a million dollars would be expended in development work in the region during the course of the season.

According to figures prepared by the freight department of the Ca-nadian Pacific Railway, the export grain movement via Vancouver reached a total of 48,971,980 bushele total of 17,887,715 bushels as on May 31, 1923. In each instance the figures cover the crop year com-mencing September 1st. The in-crease is therefore \$1,584,215 bushels or 181.5 per cent.

Enthusiastic celebrations took place at Vancouver and Victoria, B.C., when the special service squadron of the Royal Navy, headed by H.M.S. Hood, the largest warship in the world and flagship of the squadron, visited those places recently. The squadron is expected on the Atlantic seaboard in August, when efforts will be made by Canadians on that court to outdo Canadians on that coast to outdo the Pacific cities in the warmth of the walcome they extend. The an-ticipations are that thousands of visitors will gather at Quebes and elsewhere to demonstrate their af-fection for the efficers and men of

Live peaks in the Canadian Rockies have just been conquered for the first time by three Harvard and Hotch-kiss students who were accompanied by their Swiss guides. The students who climbed and named the new peaks in the famous Columbia ice field are Osgood Field, Frederick Field and Lemond Harris of Boston. They were led by the noted Canadian Pacific Railway guide this district spent most of their night thrubbing a ukelele Edward Fuez, the oldest guide in point of service in the Canadian rockies. Two of the newly conquered peaks have been named Mount Harvard and Mount Hotchkies after the two American universities. after the two American universities.

The party made five first ascents including the hitherto unconquered Mount Patterson, 10,400 feet, Mount Sir James Outram 10,700 feet, the South Twin, 10,600 feet and the unnamed peaks, Havard and Hotchkiss. Besides

Lemonde Harris had his own Swiss guide with him, Joseph Biner who has guided him for many years in the Swiss Alps. Edward Fuez who has been guiding in the The party made five first ascents including the hitherto unconquered Mount Patterson, 10,400 feet, Mount Sir James Outram 10,700 feet, the South Twin, 10,600 feet and the unnamed peaks, Havard and Hotchkiss. Besides all this they discovered a new route to the top of the second highest peak in the Rockies, Mount Columbia, 12,000 feet, which was made in a return journey of twenty-three hours. The aim of the exploring party, to conquer the South Twin, was successfully attained.

Swiss Alps. Edward Fuez who has been guiding in the Canadian Rockies since 1903 was the man who successfully manouvered this valuable expedition. The greatest novelty of the trip, he stated on his return, was the meeting of fourteen American girls on the lonely forks of the North Saskatchewan River, who were travelling alone with their packers. The girls insisted that the party stop off for dinner with them that night, following which a note of civilization was added to their wild northern. The Field-Harris party left Lake Louise five weeks ago environment by the sound of the Ukelele and the swish accompanied by two guides, five packers and nineteen of dancing feet over pine needles dimly lighted by a horses, and travelled 200 miles into the Columbia ice blasing log camp fire.

LOOK FOR LUNGWORMS

An Annoying Disease Too Common Among Pigs

Nature and Development of the Allment - Treatment - Preventive Measures-Autumn Cutting of Alfalfa-Harness and Belting.

(Contributed by Ontario Department of Agriculture, Toronto.)

Nature and Development of the

It is commonly known as lungworm disease, due to the presence of small thread-like worms in the air tubes of the lungs setting up pneumonla. The worm cauning this discase is named the "Metastrongylus apri, and is also known as the "Strongylus paradoxus." These worms locate in the air tubes of the lungs, where they deposit their ova or eggs in great numbers. The ovaas well as the embryos or young worms are then expelled from the air passages with the secretions and discharges from the nostrils, while some are coughed up and expelled from the mouth during spells of coughing. or else swallowed and expelled with the feren. This accounts for a widespread contamination of the floors of the pens and the ground in the lots and yards containing affected pigs. Small pools of water are also liable to become contaminated. In these different places the larvae develop, and from time to time become more or less a menaco_ Infection usually takes place with feed and water in hog pastures, luts and pens which have become contaminated by affected pigs. In turn the parasites invade the air passages of the infected pigs. and there reach rexual maturity setting up the disease in the banes, Once. blook becomes communicated with

these parasites, the infection Jumains dangerous for a long time, because the affected animals keep on furnishing fresh infectious material. As a result the disease gradually becomes more or has permanently esnant pools of water, enoist poorly drained yards, and dirly pens, favor the development of the infection. Young sucking pirs may also becomeinfected from the udder of the sow through contamination of its surface. Young pigs, a few months old, are the most easily infected, and suffer the worst until after they are four months old. Treatment.

Badly infected and well developed cases do not respond to treatment. owing to the fact that the worms are located in the small air tubes of the lungs and difficult to get at. Slightly infected cases, if removed to clean quarters and kept from becoming more heavily infested, seem to gradually recover. . Treatment of the affeeted animals with drugs is not satisfactory unless the drugs are inlected into the traches or windpipe by means of a hypodermic syringe. The intra-tracheal injections as a rule require to be done carefully by a veterinary surgeon. The drugs recommended as being most useful are Lugol's solution, combined with turpentine and olive oil. As a rule prerentive measures are successful in overcoming the discuse and preventing its recurrence. Preventive Measures.

The first thing is to remove all of the healthy looking pigs from among the affected ones, and place them in new clean quarters, some distance from those previously occupied. The hog yards and pens should be placed on clean high ground, with good drainage. They should be cleaned out regularly, and bedded with good clean straw. The hog wallows should be constructed of concrete and kept clean. The hog pens previously occupled by infected pigs should be thoroughly cleaned and disinfected by washing with hot water and lye and then whitewashed. The bog lots and pastures previously occupied by infected pigs should be ploughed up and seeded down. Low lying places collecting stagnant water should be drained. As soon as the young pige are weaped they should be removed from the sows and kept separate from all mature pigs in order to prevent them from becoming infected from these adult pigs which harbor the parasites. These suggestions, while comparatively simple, are nevertheless effective in overcoming this troublesome parasitic condition of pigs .---Dr. C. D. McGlivray, Ont. Vet. College, Guelph.

Autumn Cutting of Alfalfa. In the Field Husbandry department of the Outario Agricultural College alfalfa has been under test for twenty-six consecutive years. In each of twenty-four years the alfalfa gave three cuttings per annum. In 1907 two cuttings, and in 1896 four cuttings were produced in the one weason. The spring of 1896 opened up very early and that of 1907 very late. The third cuttings were made on September 17th in the average of the twenty-four years. It is important to cut alfalfa before the 20th of September so as to enable the crop to make a good growth before the approach of winter. So says Dr. C. A. Zavitz of the Ontario Agricultural

Harness and Belting.

It is important to note that any leather improperly used, or neglected, will deteriorate rapidly. For example, belts for driving machinery often become impaired, if not useless, in a very few years whether on straight drives or not, but when they are kept clean and olled they will inst ten to thirty years.

Apply the grease lightly to driving harness and more liberally to work

harness. The grease of oll should be rubbed thoroughly into the leather while it is stid damp from washing.
