SELECTING DAIRY COW

TEMPERAMENT, FEED CAPACITY, CONSTITUTION AND VIGOR.

These are the Points Which Should Receive Attention and This Article Tells What to Look For Under Each of These Heads.

When a man is in need of dairy cows he goes out to select for animals that are likely to be profitable to him there are a number of things to be kept in mind. A cow is a cow, but comparatively few are real high producing profitable cows.

Temperament, dairy temperament, have thin necks, sharp withers, prominent vertebrae, hips and pin bones; thin, muscular thighs and a general body conformation that is wedge-shaped no matter from what angle it is viewed.

Cows with "feed capacity" show plenty of room or middle for the storage of feed. They are long and deep between the shoulder and the hip, large vacant forechest, broad muzzle, and large jaw with full well-developed salivary glands.

Cows with "constitution and vigor" are well through the heart region, have a big strong heart, a strong circulation of blood to all parts of the body. This condition is usually reflected in the healthy condition of the hair, oily secretions of the hide and well-developed prominent veins on the under side of the abdomen and on the udder, face and neck.

Cows with "well-developed milk organs" can boast of the following characteristics: Udder well attached to the body and not pendulous. Udder tissue pliable and soft to the touch, free from coarseness, hard areas or lumps.

Udder of good size, extended well forward and high up behind. Large veins running from the anterior attachment forward and well along the abdomen.

Don't forget the producing dairyman is not likely to sell his best cows. Those that have faults are most likely to be offered for sale. If you can see best milked cows in the lighter—L. Stevenson, Dept. of Extension, O. A. College.

High and Low Testing Milk Compared With Mixed Milk.

The question has been raised as to whether milk with varying fat content when mixed, as is done at the cheese factory, would give results that average between high and low testing lots made up separately, as is done with experimental testing.

Four tests were made by dividing lots of milk as delivered to the O. A. C. Dairy Department from farms surrounding Guelph, between two vats, one of which tested high in fat and the other comparatively low. Each vat contained 450 pounds of milk. From each 150 pounds were taken and mixed in a third vat. Altogether 1,200 pounds of milk were used in each lot. The average percentages of fat in the milk were 3.55, 3.27 and 3.53. The yields of cheese per 1,000 pounds of milk were, respectively 102.6, 94.63 and 97.60. The theoretical yield of the mixed lots is 95.81 pounds of cheese which is within one point of the actual. This difference is accounted for by differences in moisture content of the cheese, differences in shrinkage and in losses due to handling the milk, curd and cheese.

The average scores of the cheese were 88.48, 88.81 and 88.74 respectively for high, low and mixed lots, indicating that in the opinion of the expert judge there was not much difference in the quality of the cheese.

Conclusion.—These tests show that mixed lots of milk containing varying percentages of fat are likely to yield cheese averaging fairly closely to what would be obtained if the lots were made separately into cheese.

Sweet Clover Butter. The tests made in butter-making during 1924 with milk from cows pasturing on sweet clover were conducted with milk from farms where sweet clover was the only pasture. The butter was made in small lots in the Farm Dairy at the O. A. College and was scored by the Official Butter Grader for the Province. As in other years no flavor could be detected in the milk, cream or butter which might be attributed to sweet clover feeding. Five lots of butter were made altogether, one from raw cream churned sweet, one from raw cream ripened with a culture, one ripened without culture, one from pasteurized cream to which culture was added and then ripened. These conditions cover practically all that are likely to be met with on the farm or at the creamery. The butter was held in 30 storage for two months before it was judged, in order to allow any flavors to develop that might be present. Sweet clover is a valuable pasture crop on dairy farms and should not be condemned by cheese or butter manufacturers. Dept. of Extension, O. A. College.

A garden is a beautiful book, writ by the fingers of God; every flower and every leaf is a letter.—Douglas Jerrold.

New "Baby City" of Ontario

(1) North Bay's Main Street. (2) The Canadian Pacific Station, North Bay. (3) The Post Office.

An Old Home Week Celebration to celebrate the attainment of City status will be the big attraction for Northern Ontario the first week in August. North Bay, to-day the largest town in the Province, with a population officially estimated at 13,011, will become the Baby City of Ontario on Sunday, August 22nd.

The history of North Bay is one that is not generally known to all Canadians, even though the name is familiar from the Atlantic to the Pacific, as a great railroad centre. North Bay was originally discovered by Samuel de Champlain in 1615 and was a post on the old trail from the Ottawa to the Great Lakes in the time of the French explorer.

The first settlements here are recorded as in 1852, with the coming of the first train over the Canadian Pacific Railway. North Bay was never incorporated as a village. Lake Topay, it just grew and became officially a town in 1891. In 1895, the population was 2,224. In 1906 it was 3,818, and in 1915 it was 10,041, and last municipal census placed it at 12,011, while the rapid growth of the town this year indicated that it will be at least 15,000 when it takes its position as a City next August.

The Canadian Pacific paved the way for North Bay. The old Grand Trunk followed with its first train in June, 1858. Next was Northern Ontario's own railway, the Temiskaming and Northern Ontario, which was built north to the mine area from North Bay in 1904, the first train being operated out of here on January 12th, 1905. The Canadian Northern was the fourth line to come in here, their first train arriving on September 14th, 1915.

Three and a half tons of gold bullion pass through North Bay every month from the Northern Mines, 60ral Park and represent a value of \$1,500,000. The Canadian Northern carries 503 tons of high-grade silver ores, 6,030 tons of pulp and 12,450 tons of paper. It makes a formidable army when checked up.

50,000 \$15.00 TO WINNIPEG HARVESTERS WANTED. Plus half a cent a mile beyond all points in Manitoba, Saskatchewan, Alberta, Edmonton, Winnipeg, Calgary, Macleod and East. Returning—Half a cent per mile to Winnipeg, plus \$2.00 to destination.

STANDARD TIME Through trains—Comfortable Colonist Cars—Special cars for Women and Children. Purchase your ticket to Winnipeg via Canadian National Railways, whether or not your final destination in the West is a point on the Canadian National. Tickets and all information from nearest Agent.

Golf in the Heart of the Rockies

Five views of the new Jasper Park Lodge Golf Course in Jasper National Park, Alberta. This course will rank among the best playing courses on the continent and it has the added feature of an incomparable scenic setting.

WHEN it was decided to add golf to the attractions of Jasper National Park the policy adopted from the outset was that the golf should be good enough to be appreciated for itself, the beauty of the scenery being merely an added attraction. Since the course has been cleared and is revealed to the visitor he concludes that the Canadian National Railways was fortunate to have such a great extent of golfing terrain so immediately available to the Lodge. A year ago, when most of it was Rocky Mountain forest, the golfing possibilities were not so apparent. Work was commenced early in the summer of 1924 and was rushed forward with such success that nine holes will be available for play during the summer of 1925.

Fortunately there is no day at Jasper. This should delight the golfer's heart. The surrounding streets are generally gravel like all the Athabasca River basin in which Jasper is situated, so that the fairways have under them that generally alluded much to the scenic attraction of the course to have such a route as every hole.

The ups and downs of holes and the undulations of the fairways are only those to be desired on a first class course located in a good golfing country, although on every hole of the course great, more vert. The route is quite an exceptional one and there is a complete absence of paralleling in the ordinary sense of the term, although the 10th has the 6th immediately to the right of it. The ups and downs of holes and the undulations of the fairways are only those to be desired on a first class course located in a good golfing country, although on every hole of the course great, more vert. The Greatest Service—The Least Attention

There's no piece of farm equipment that gives so much service over so long a period with so little attention as a good windmill. That's why I recommend the Toronto Self-Oiling Windmill so highly.

If you already own a Toronto Windmill, I can give you this self-oiling feature by merely interchanging the head and using your present wheel. Most Toronto Windmills, can be made absolutely self-regulating in operation.
