STOPPED HIS STOMACH TROUBLE

"Fruit-a-tives" Made Him Entirely Well

MR. BOVAY

"I wish I could tell every sufferer in the world what 'Fruit-a-tives' has done for me," writes Mr. Roy A. Bovay, Toronto, Ont. "I was troubled by Indigestion, Nervous Dyspepsia and Liver Trouble. Then I commenced taking 'Fruit-a-tives.' Very soon my condition improved, and now, thanks to this wonderful medicine, I am once more entirely well."

"Fruit-a-tives" regulates stomach, liver, kidneys, lowers and purifies the blood—and tones up the whole system. 25c and 50c. A box at dealers everywhere.

WHERE TO LEARN WHAT ARE THE BEST VARIETIES OF VEGETABLES TO PLANT

The vegetable variety question is an age old one, and still we find many of the vegetable growers in doubt as to which variety of carrot, beet or pea to be an enormous effort put forth to introduce something new and to which variety each enter to doubt it is confusing to growers when seed buying time comes, for in many cases the old varieties are given a lower rating than the new varieties. It is true that improvement is needed in many of the varieties, and particularly so when recent conditions have been considered, but there is time enough to change abruptly from the old varieties to the new ones. It is not enough to test and report upon old varieties in every Province throughout the Dominion of Canada; there is no Farms or Stations where variety testing has been conducted for a long period of time and where the varieties of recent origin are now under test, thus making it possible for growers in all parts of Canada to get first hand information regarding the merits of almost any variety.

To serve as a guide to the growers a list of standard variety names has been prepared. In this list will be found the proper name for each of the outstanding varieties. It is deemed advisable to do this for the benefit of the public to know the correct name for each sort and further to limit as far as possible the great duplication of varieties under other names. When new introductions are found, they should be placed on this approved list, after they have been tested sufficiently and passed the approval of the horticultural experts.

Every person interested in seed purchasing should have a copy of this list and insist upon getting the variety under their correct name. That name, of course, will be found by writing to the Publications Branch, Dominion Department of Agriculture, Ottawa, Ontario.

If at any time there is doubt as to the value of a variety for a locality this can be easily settled by writing to the superintendent of the nearest Dominion Experiment Farm or Station. T. F. Ritchie, Central Experimental Farm, Ottawa, Ont.

RESULTS IN EXPERIMENTS IN SPROUTING SEED POTATOES

In order to obtain potatoes of marketable size early in the season many market gardeners follow the practice of sprouting seed potatoes before planting. An experiment to determine the value of this practice, relative to the cost of the seed, was conducted at the Dominion Experimental Station at Lennoxville, P.Q., has now been conducted at that Station for five years. This experiment has each year consisted of a comparison of dormant and sprouted seed potatoes of Irish Cobbler and Green Mountain. All seed has been kept in the best available storage until the first of April. At that time equal quantities of each variety, in plastic shallow trays and sprouted in the usual manner, the other half being kept as dormant as possible until planting time.

With the variety Green Mountain the sprouted seed has given an increase in yield of approximately four per cent over dormant seed. There has also been an increase in earliness of from eleven to fourteen days. In the instance, however, of the variety Irish Cobbler, the sprouted seed has given an increase in yield of approximately four per cent over dormant seed. This variety has also been kept in plastic shallow trays and sprouted in the usual manner, the other half being kept as dormant as possible until planting time.

With Irish Cobbler the results have been somewhat different, the yields from sprouted and dormant seed being practically the same. With the sprouted seed, however, an average increase in earliness of eighteen days was obtained. Accordingly, it would seem that if the price for very early new potatoes is sufficiently high to compensate for the necessary additional expense the practice can be recommended with Irish Cobbler. In the case of Green Mountain, however, it compensates the grower for the additional expense of sprouting and extra work of planting.

With Irish Cobbler the results have been somewhat different, the yields from sprouted and dormant seed being practically the same. With the sprouted seed, however, an average increase in earliness of eighteen days was obtained. Accordingly, it would seem that if the price for very early new potatoes is sufficiently high to compensate for the necessary additional expense the practice can be recommended with Irish Cobbler. In the case of Green Mountain, however, it compensates the grower for the additional expense of sprouting and extra work of planting.

GENERAL NEWS

A bad case of hog cholera has been located in the township of Markham on the farm of Richard Curthiers, four miles south of Stouffville, on the tenth concession. When the government inspector visited his pens over 90 animals were ordered shot. Ten more had died only recently.

A particularly sad death at Guelph last night of Miss F. E. Yeates, daughter of Mr. and Mrs. Charles Yeates, Strang St., a bright collegiate student, who died on Sunday on her 19th birthday. Less than a week ago a blister formed on her heel and a day or two later blood poisoning set in, ending in her death.

The Dominion Power and Transportation Company of Hamilton has purchased the right to operate bus lines completely around Hamilton from the lines to Guelph, to Chatham, to Niagara Falls and to Toronto. The routes are all controlled by this company.

Farmers of the Province, including the Niagara fruit belt, are well pleased with the amount of snow covering their fields, according to Hon. John S. Martin, Minister of Agriculture. Fruit trees have not been affected by any severe weather. "A splendid winter," says Mr. Martin, "has resulted in a word of complaint from any farmer."

At the last meeting of the Oakville town council the clerk was asked to send an account of the fire to the township to cover the expense incurred when the fire brigade responded to the call from Hamilton on Sunday, Feb. 17. The question was raised as to whether the fire equipment should be permitted to go such a long distance, leaving the town unprotected.

Rheumatism no Part of Nature's Plan

She offers her healing herbs to stop suffering

When America was wilderness, Indians were using herbs successfully. From the Healer, 50 years ago, James Gallagher learned the secret and compounded Gallagher's Herbs. He has helped many a sufferer from Rheumatism.

This fine, time-tested remedy, drawn from the heart of Nature, heals and cleanses kidneys. Quickly stops backache, distention and other ailments of the bladder system. Try it! For sale by

WISHING

Do you wish the world were better? Let me tell you what to do: Set a watch upon your actions. Keep them always straight and true; keep them free of selfish motives. Let your thoughts be clear and high: You can make a little heaven of the abode you occupy.

Do you wish the world were happy? Then remember day by day Just to scatter seeds of kindness. As you pass along the way; For the pleasure of the many. May be oftentimes traced to one, As the hand that plants the seed. Blessings armies from the sun.

TREES ON HIGHWAYS AND HIGHWAYS

At each succeeding convention of the Ontario Horticultural Association, trees of various kinds have been given increasing attention. At the 1928 convention a committee was appointed to make recommendations that may be offered by the Association as a guide to horticulturists and municipalities throughout the country. This committee, having as chairman, Mr. J. Moore, secretary of the Ontario Horticultural Association, gave their report at the convention held in Toronto on Sunday, Feb. 17.

These recommendations cover the subjects of minimum planting standards, varieties of trees to be planted, and other matters related to the subject. Following are the recommendations:

(a) That trees on narrow streets should have a minimum spacing of 40 feet on boulevards or wide streets, 35 to 60 feet, and on roads 75 feet.

(b) That on narrow streets the less spreading or more erect trees such as White Ash, Hard Maple, Pin Oak be planted, also Tulip Trees and Oriental Spruce. The latter will endure as in southern localities.

(c) That in northern municipalities such as those in the approximate latitude of New Liskeard, the soft Maple be used on streets and in parks, and the Laurel Leaved Willow, which later is especially recommended for our climate, be used in parks, such as Cochrane and points in this latitude.

(d) That the spacing of trees on provincial highways should be 75 feet. Such trees as indigenous to the particular locality should be planted, including Kink, Red Oak, Sugar Maple, White Ash and Norway Spruce. That when grouping of trees is practised, as on the wider sections and where lowly growing trees such as Birch and other attractive ones are used, the spacing should be 75 feet. That in southern municipalities, as in the Niagara Peninsula and along the coast, the following trees be planted: White Pine, Chestnut and English Walnuts be also planted.

(e) That trees such as Manilla Maple (Box Elder), Poplar, including Cottonwoods, and under certain conditions, the Norway Spruce, be planted on street or roadside. That willows be not planted except when used in parks, as they are not of use of other trees.

(f) That in order to control the planting of trees on streets, municipalities and the subsequent pruning if necessary, also the removal of undesirable trees, a by-law be submitted to the tax payers on municipal election day with the recommendation that the work may be placed in charge of a committee of the municipality.

After a considerable discussion in which delegates from many parts of the province were present, the recommendations were approved by the Association for the guidance of municipalities throughout the province.

FINDERS SHOULDN'T BE KEPT

A woman in England was arrested a fortnight ago charged with "stealing by finding." It is an interesting case. Too many people imagine that if they find something valuable and do not know who lost it, it becomes theirs.

In this case the woman found a pocket watch in the street and, supposing it to be a cheap thing lost by a child, threw it in a drawer where it lay for some days. One day somebody on seeing it advised that it be taken to a jeweller for valuation. The woman, on seeing the advice and was informed the necklace was worth over £400. At the time of its being found, she had a description of the necklace, so the jeweller notified the police and they arrested her. She explained that she supposed the pearls valuable and had taken it to the jeweller. "I'm arrested for finding things," she exclaimed. "I'll never pick up anything more."

As the woman's character is good and as she evidently knew nothing of the value of the watch, it is probable that she will get off with a reprimand. There is, however, an erroneous impression that the finder of a lost object finds anything is under no responsibility to take action to seek the owner. It is up to the finder to do this. This is not so. The finder has the article, knows where it is, knows that it is not his own and that he has not every consideration of honesty but the law explicitly expects that he (or she) will make an effort to find the owner. On the contrary do everything possible to locate the owner and restore the article to him. If you do not do this and reporting it at such places as the loser would be likely to make inquiries, the finder is liable to "stealing by finding" than there ought to be.—Toronto Star Weekly.

NOTICE TO CREDITORS

IN THE MATTER OF THE ESTATE OF PHOENIX KIRKPATRICK, late of the County of Hamilton, in the County of Hamilton, Ontario, deceased.

NOTICE IS HEREBY GIVEN that all persons having claims or demands against the estate of the said Phoenix Kirkpatrick, who died on or about the Thirtieth day of January, 1929, at the village of Chesham, are required on or before the Twenty-eighth day of March, 1929, to send by post, to the undersigned solicitor for the Executors of the said estate, their names, addresses and full particulars of the claims, and to retain the nature of the security, if any, held by them.

AND TAKE NOTICE that after the said last mentioned date the said Executors will proceed to distribute the assets of the said estate among the parties entitled thereto, having regard only to the claims of which they shall have notice in due time, and the said Executors will not be liable for the said assets or any part thereof to any person who has not been received by them at the time of such distribution.

Dated at Georgetown this Fourth day of March, 1929.

CLARENCE H. WIGGINS, Georgetown, Ont. Solicitor for the said Executors.

Ending PILES for 20 years!

For twenty years NATURE'S PILE REMEDY has been curing piles of (itching, burning and protruding piles) naturally and without any operation. This simple (herb) compound works directly on the cause of the trouble, and gives a quick and positive relief. Successful in the treatment of all cases of piles, hemorrhoids, and itching, burning, protruding piles. At all good druggists, H. H. Darling, Georgetown.

Health Service of the Canadian Medical Assoc.

A SCOTTISH INVESTIGATION

For the past few years, the Board of Health of Scotland has been carrying out an investigation in regard to the nutrition of school children. In the schools of seven centres selected for the study, the children were divided into groups. The objective was to ascertain whether or not the children who received a daily ration of milk would show an improvement in health greater than those who did not receive the milk, or those who received a biscuit only.

The result was that the children receiving milk were, after a time, found to be twenty per cent heavier and taller than those not receiving milk. There was, in other words, a decided improvement in growth. The general health of many of those in the milk group was noticeably better. This improvement was not temporary, for the milk continued to improve while the milk ration was maintained during a second period of investigation.

This is not the only investigation of the kind that has been made. Other schools of a similar nature, in other countries, have shown that, during the growing years, milk, as an article of diet, is essential. The nutrition of milk cannot be too strongly emphasized, because we have no substitute for it. It is the only food and those in charge of children is to see to it that their children are not being handicapped through the lack of milk in the diet. Milk is not a complete diet for school children, but it is a necessary part of it. It is not necessary that it be drunk. It may be taken on bread and other foods; it may be used in cocoa, in milk pudding or in any other similar manner. It is hardly to be said that pure milk only should be used, and that means milk from healthy cows, and pasteurized.

Questions concerning health, addressed to the Canadian Medical Association, 184 College St., Toronto, will be answered by letter. Questions as to diagnosis and treatment will not be answered.

Spring starts March 21st

Get ready NOW

SPRING is practically here! Soon you'll be feeling the lure of the road again. Your hands will be tingling to get on the wheel.

And here's your chance to save money on a Good Car... a car with thousands of miles of enjoyment left in, that somebody gave up to get an Outstanding Chevrolet.

We can't keep these Used Cars in stock with the spring deliveries coming in. They MUST go. They ARE going. BUT there are still many bargains left. Sell a good variety to choose from. So come in and grasp this opportunity. Be ready for Spring this year!
