WISER OR OTHERWISE

Spooky lovers may make a stir in public. It takes a woman to break a self-made man. A man may be honest and still take chances. The straight and narrow path—the fire escape. Everthing comes to the man who waits on himself. Two heads are better than one—if neither are aches. Don't think that dollars can be acquired without sense. Life is short and it only takes two seconds to fight a duel. Fortune-telling is neither a trade nor a profession. A chinch. No one who starts out to look for trouble has use for a gun. It is easier to restore a faded old painting than a borrowed umbrella. A talkative friend can do more harm sometimes than a silent enemy. The mother-in-law joke goes in the funny papers, but it falls flat at home. Chaitin covers a multitude of sins. That should be allowed to remain uncovered. Chewing gum was probably invented by a woman who had no one to talk to. It takes us a lifetime to learn what we have our own friend and worst enemy. A man with a well-balanced mind doesn't have to part his hair in the middle. Some men take advantage of their opportunities—also of those of their neighbors. Fishermen and grass widows are alike in that they expect to have better luck next time.

STOCK FEEDING PROBLEMS

In deciding what to feed during the coming spring months, you naturally consider first the roughages and grains that have been raised on the farm during the past year. These constitute your cheapest source of supply and it is good economy to so plan your feeding program that you will use as much of them as possible as the basis of your ration. However, it is equally important to remember that no combination of home raised feeds fully meets the needs of dairy cows, hogs, and poultry, and it is poor economy to feed such large quantities of home feeds that waste, while other nutrients needed are lacking. It is a wise farmer who realizes that it is just as important to know what feeds to buy as it is to know what feeds to raise. In selecting the feeds needed to supplement home grains and roughages two courses are open. If desired, one may buy several different roughages, such as alfalfa, timothy, clover, and work them into his ration. If a good formula is followed, the advantage of this plan over straight home feeds has been proven to be both sound and profitable. Supplementing home feeds with ready mixed commercial rations is being done more and more. Many feeders who have followed this plan for two or three years claim that this plan is superior to attempting to mix rations at home, both from the standpoint of extra profits and eliminating the bother and labor of mixing. The matter of cost is one of the first questions to be considered, and considering such rations it is important to realize that the profit left after the feed is paid for is greater rather than its initial cost by the hundred pounds or ton. Few realize what a surprisingly small increase in production is required to outweigh a seemingly big difference in the initial cost of two rations. This applies in comparing the cost of a good home mixture with a poor one, as well as a home mixture with a commercial ration, or in comparing the value of different ready mixed rations. \$20.00 per ton may seem to be an enormous difference in the cost of two mixed feeds for poultry. One may readily wonder whether the extra cost of the more expensive ration would produce enough extra eggs to offset the difference in cost. A hen eats in one month 3 lbs. of mash which at the rate of 1c per pound is 3c per hen. Thus a difference of \$20.00 per ton is only 3c per hen per month. If the better of the two rations causes the hen to produce only one extra egg the difference is more than offset. A stock laying 40% or 12 days a month are losing 18 days a month. If one ration cuts only one day off the 18 days of loafing it is worth \$20.00 a ton more. This same principle applies to feeding dairy cows. Suppose you were considering two rations, the initial cost of which may vary \$10.00 a ton. The milk is worth 2 1/2c a pound, 3 lbs. of milk per day more offsets this difference of \$10.00 per ton. This is one pound at a milking or about 1 1/2 of an inch in the pail—not enough to be even noticeable. In considering ready mixed rations, they cannot be considered as a general class and all having the same value. There are a number of honest, reputable concerns with high ideals that are striving to build products that will increase feeding profits. Unfortunately, just as in the case in every other industry, there are a few firms whose products are made primarily to sell or intended to dispose of some by-product of low feeding value. The economy of a good ration is that a feeder must use his judgment as to how he does in buying other materials needed on the farm. Another very important consideration is whether the ready mixed ration is intended to be fed as a supplement to home feeds or whether it is made as a complete ration. Obviously, it would be poor economy to buy a ready mixed ration that would not fit in properly with home feeds and would either throw your ration badly out of balance, or necessitate your disposing of more of your home feeds than is necessary. To some extent, the analysis may be relied upon as a guide. However, there are a number of important factors that analysis do not show. For example, it tells us nothing about the digestibility of the feed—the amount of protein, carbohydrates, etc. that can really be used by the animal—a very important point. Neither does it tell us anything about the palatability of a ration, and since the more palatable a ration the more easily digested, this is also very important. Neither does the crude chemical analysis disclose anything about the variety of proteins which are absolutely necessary to maintain milk or egg production and keep up the animal's body. Complete protein can only be obtained from the right combination of several different ingredients. In selecting a ready mixed ration, any feeder will do well to ask himself the following questions in order to best determine which ration will give him the best results. How long has the manufacturer been in business? What growth and progress has the manufacturer made? What has been done to make this particular feed the best dollar per bushel of feed you can buy for your money and the best suited to your particular needs? What type of dealer is handling the product? What can the ready mixed ration be expected to do in the way of extra dollars over feed cost? What proof is available as to the results this particular ration has produced?

Here and There

(412) The bull sale at Kamloops this year is scheduled for March 19 and 20. The show is becoming an important event in western livestock records. A big list of Alberta entries has been received. The Maritime Livestock Marketing Board have extended their purchasing plan so that no farmer, club and associations may purchase feeds at a considerably lower price than formerly. Several carloads of feed have already been ordered.

The directors of the Canadian Pacific Railway have decided to apply to Parliament for an amendment to the company's charter permitting it to change the par value of shares of its ordinary stock from \$100 to \$25 per share with the exception of one share of the old stock for four shares of the new. This action has been dictated by a desire to place the company's shares within the reach of investors of moderate means and thus increase the number of its shareholders, particularly in Canada.

Miss Doris Parkes, of Vancouver, became the first female member of the Banff winter sports carnival, following her selection as a member of the committee for the gathering at the famous mountain resort. She won against rivals from Calgary and Annapolis and was crowned as the color pageant try in the closing hours of the carnival. "Not how much land settlement work, but how good," was enunciated as the motto of the Canada Colonization Association, by W. M. Neal, general manager of western lines, Canadian Pacific Railway, at the annual meeting of the organization held at Calgary recently. Mr. Neal said that during the past five years the association has settled 4270 families on 844,388 acres at a purchase price in excess of \$58,000,000. The largest terminal grain elevator at any port on the seven seas has been received into operation at Vancouver by the Alberta Wheat Pool. It has a capacity of 2,500,000 bushels of grain and is valued at \$1,000,000. During the crop year ended July 31, 1929, Vancouver shipped 96,122,718 bushels of grain as compared with 79,714,512 and 34,415,653 in the two previous years. More than \$50,000,000 will be expended on new equipment, new branch lines, connections and improvement to existing equipment and roads by the Canadian Pacific Railway during 1930, according to an announcement made recently by E. W. Beatty, chairman and president of the company. Of this huge amount, \$10,000,000 will be expended in new equipment and conversion and improvement of existing equipment; \$3,000,000 in telegraph and telephone lines; \$10,000,000 in Pacific hotels from coast to coast will benefit by \$3,500,000; rail facilities in the west will amount for \$10,000,000; \$7,500,000 will go on expenditures for eastern Canada lines. The fifty millions will include \$12,500,000 for maintenance during 1930, but does not include large expenditures on ocean steamships, now in hand, and on immigration work.

Here and There

(476) It is reported that coal deposits in Central British Columbia and the Yukon and Copper River, recently discovered, amount to 460,000,000 tons of bituminous coal. Arne Pallas, national librarian of Iceland, the oldest surviving democracy when the 100th anniversary of the first Parliament in the world will be held next June arrived at Saint John on board S.S. Minnedosa, carrying with him a Canadian Pacific ship will carry visitors to the great world gathering in Iceland. A special train, a University of Wales is operating from Moose Jaw early in February and ending at Saskatoon March 15. It consists of two second class cars with lecture car and is bringing to farmers in out-of-the-way districts the west the very latest in agricultural methods. The lecture car is in charge of officials of the Field Crops Branch of the Saskatchewan Experiment Station. The train is travelling over Canadian Pacific lines, with which company the department is co-operating.

Entries continue to pour into Victoria for the second annual Supreme Golf and Country Club tournament over scenic Colwood course February 17-21, for the E. W. Beatty Trophy and a long list of silver cups. With the new Club House at Colwood slated to open shortly, a highly interesting and popular golfing season is expected for this popular course which is attracting golfers from all over the United States and Canada. The Quebec Winter Sports Association has decided to hang up cash awards for the winners of the Ice Canada Race to be held February 23. Canadians will leave Lewis with their ice skates, make their way across the River St. Lawrence to Quebec, take a bag aboard under the shadow of historic Chateau Frontenac, and then negotiate the hair-raising stretch that separates the two cities. "By careful selection of the character of colonists we can place in Canada we help in the development of the Dominion," said C. J. S. Dennis, former chief commissioner of Colonization and Development, Canadian Pacific Railway, and now acting in an advisory capacity to the department, said on sailing from Saint John recently on a trip of inspection to Great Britain and Europe. He will discuss certain agreements between the British Government and the C. P. R. regarding the movement and placing of British colonists in Canada. Canadians drink nearly 100 per cent more milk than they did in 1921. The per capita consumption is about one and a half quarts per day, or 474 pounds, per year, compared with about one-half quart per head of population in 1921. The milk consumption in the United States is about 482 pounds per capita per year or 1446 quarts per year. The per capita consumption of milk in Canada is more than that of any other country in the world—482 pounds per capita per year or 1446 quarts per year. Their appetite for ice cream has increased from 4.2 quarts in 1921 to 7.4 quarts in 1929, and the per capita consumption of cheese has risen from 1.1 quarts in 1921 to 3.24 quarts.

Did You Ever Stop To Think

That the town that fails to encourage the business concerns it now has will fall way behind in the March of Progress.

That when business concerns fail to use every effort to increase their business in the home town and its trade territory, they are holding back its progress.

That merchants should show the people of their community by NEWSPAPER ADVERTISING that they can supply their every want.

That people appreciate the true merit of the home town as a trading centre when the local concerns take interest enough to tell them what they have through the recognized shoppers' guide—THE NEWSPAPERS.

That newspaper ads. draw shoppers from other localities. Shopper do not come to town to buy just one article, they usually buy many articles.

That out-of-town shoppers, as well as the local shopper, should receive prompt and strict attention.

Advertising, Service, Quality and Price are the Big Attractions that Bring Them to Trade
