

The race for health...

It is easily won by the man who eats the foods that furnish real nutriment and do not tax the digestion. Shredded Wheat with milk not only tastes good, but is good. The crisp, flaky shreds of baked whole wheat are so appetizing and strengthening. Combines the "roughage" you need with the proteins and mineral salts. Delicious for any meal with your favorite fruit.

FISH AND STRINGS

A wise old fish was interviewed, Said as he flipped his tail: "To try and live to great old age Would be of no avail. Unless one watched his diets from The day that he was hatched. And never ate a tempting bait That had a string attached!"
 "My father said when I was young: 'Beware of tempting bait; 'Tis better far to pass it by And let your hunger wait Than to try to best the unseen hand With whom your wits are matched. If you'd live long never take a gift That has a string attached.'
 "His words held truth: Have I not seen Unnumbered fish who've tried To take the lure without the string And later on have died In someone's pan. Beware the man Who leaves his food untried. And never takes a glittering gift That has a string attached!"
 Men might from this fish story take A moral that would save Them many troubles and regrets. 'Tis that it's best to earn one's way. For though the string be short, 'Tis better to have it on one's side Than place their hands upon the gift That has a string attached.

News and Information for the Busy Farmer

Crop Report
 The first crop reports for the month of June shows the despite frosts in many parts of the province which caused considerable damage, the crops are coming along in the style. For instance the Counties of Carleton, Glengarry, Dundas and Durham all report fall wheat, clover, alfalfa and hay crops in excellent condition. Such bumper crops as strawberries, peaches, beans, potatoes, early corn and tobacco suffered injury in many localities, but most consider the present season damage. Milk production is reported to be above average in Dundas and Leeds Counties. Pastures are reported to be in splendid condition without exception. With the coming of warmer weather all crops have shown rapid improvement.

Call Them Out
 As soon as the spring spent in egg production commences to lessen there are certain hens in the flock that should be culled out and marketed. The sooner they are gotten rid of, the bigger will be the flock. Labor is reduced, feed costs are lowered and the profitable birds are given more room in the laying houses and on the range. Poultry also should sell for more money per pound in the early part of the season than later, so the farmer is a material gain in disposing of the non-productive birds. One of the simplest ways to cull the flock is to go over the birds when they roost at night. Pick out those with shriveled, rough combs and shrunken, hard abdomens. A bird with a large amount of fat around the abdomen is not in laying condition.

Clover Crop Valuable
 Clovers are among the most valuable crops grown on the farms of the province. Not only do they furnish a large percentage of the nitrogen supply in stock feeds but also a large part of the nitrogen content of the soil. These crops improve the mechanical condition of the soil and play a large part in making the soil fertile available for the use of other plants. In an experiment conducted for a period of several years at the O.A.C. it was found that Mammoth Red Clover yielded 294 tons, Alder Clover 2.2 tons and common Mammoth Clover 2.75 tons of hay per acre. In each case only one crop of hay was taken last season from Mammoth Red and Alder Clovers while in most years during the experiment two cuttings were obtained from Common Red. Experiments are now in progress and it is hoped to produce a strain of Red Clover which will reach hay condition at almost the same time as timothy.

Farmer's Week at O.A.C.
 The Ontario Agricultural College at Guelph will be thrown open to inspection by the farmers of the province on four days this month, June 16, 17, 18 and 19. The visitors are advised to arrive early in order to have time to see the big institution and are requested to bring a basket lunch to supplement the picnic style, under the shade trees by the apparatus by noon. The college has made provision to supply hot tea, milk and ice cream. After lunch the men will be shown over the crop experiment plots and will have an opportunity to inspect the live-stock. The ladies will be at liberty to visit McDonald Hall, the various buildings on the campus and any other department of the college they desire to see. About four o'clock the campus will be available for the baseball games, horse shoe pitching or any other sport.

Treating Seed Potatoes
 Naturally, the aim of the potato grower is to produce the biggest and best crop at the lowest possible cost. This is dependent upon a number of factors such as good soil, quality of seed, spraying and cultivation. While the importance of these features is unquestioned, very often the prospect of a good crop is ruined through neglect to practice seed treatment which is aimed to reduce enormous losses and inconveniences caused by such black leg and late blight, all of which come from the province of Canada. The commonest method used to treat seed potatoes is to immerse them in a solution of formalin. One gallon of water is made up and placed in a barrel. The seed potatoes, washed and dried, are placed in a sack and suspended in the liquid for two hours when the bag is pulled up and the solution allowed to drain back into the barrel. Then the seed may be cut and planted.

Make the Manure Pay
 Ontario usually has about four and one half million acres of hay crops each year. In past years the province before having one cannot help feeling that many of these acres are not paying the taxes and the cost of handling the crop. Statistical reports indicate an average yield of only one and one-half tons to the acre and this can certainly be improved upon. For the meadows, good drainage and sweet soil are very important. Roots of grasses and clovers are apt to penetrate wet soils and wherever there is a surplus of water on the soil, air is shut out and hence the bacterial life is either weakened or killed. Another point in meadow improvement is the use of high quality seed. If poor seed is used the meadow starts out with a handicap. Good drainage, good seed, and liberal supply of suitable fertilizer makes profitable meadows.

Northern Ontario Leads
 Returns to the Provincial Aerialists indicate that the northern parts of Ontario give the highest yields of honey. For 1929 the average per colony was 180 pounds in Kemora, 137 in Bruce and Renfrew, 118 in Northumberland and 108 in Algoma. One Southern county, Elgin, has the high average of 163 pounds while the adjoining counties, Kent and Norfolk have 143 and 130, respectively. In total quantity, Bruce, Grey, Simcoe and York take the lead, partly due to their large area but also due to the fact that clover and alfalfa are grown abundantly. The honey crop for the province for the season of 1929 was 12,000,000 pounds, three-fourths of which was "clean white." The estimated value was over a million dollars.

THE EDITOR'S SONG

If you have a tale to tell, Write it out and write it well, Being careful how you spell; Send the kerosene lamp the shell; And the ink—Boll it down!
 Then, when all the job is done, Boll it down!
 If you want to share our fun, Know just how a paper's run, Day by day from sun to sun, Boll it down! Boll it down!
 When there's not a word to spare Boll it down! Boll it down!
 Heave a sigh and lift a prayer, Stamp your foot and tear your hair, Then begin again with care— Boll it down! Boll it down!
 When, all done, you send it in, We'll boll it down.
 Where you end there we begin; The story that we tell is true, With a scowl or with a grin, We'll boll it down; Boll it down.
 Pardon my advance.

New Appointments
 The increasing demand for marketing service and the general work in connection with the crop operation and Markets, Branch of the Ontario Department of Agriculture have resulted in the following appointments: Appointing an assistant director of this branch A. H. Martin of Renfrew. Mr. Martin has been Agricultural Representative for Renfrew County since 1922 and previous to that time was assistant representative in Wellington County since 1918 and in Ontario Agricultural College in 1924.

Fighting the Saw Thistle
 Prof. H. J. O. A. C. recommends the following practice to assist the farmer in combating the saw thistle menace:
 1. Plow early and summer cultivation during the dry, hot weather immediately following hay or harvest.
 2. Plow during the winter, such as sweet clover, rape and buckwheat. These are very effective when properly handled.
 3. Short crop rotations which give a chance to use hoed crops frequently.
 4. Under-drainage of lands requiring it. (Poverty drainage is most favorable to the growth of the saw thistle).

Which Effect of Fertilizer
 If you have applied any fertilizer to your lands this spring, much can be learned by watching their effect on the crops during the next few weeks. Experience has shown that properly-chosen fertilizers produce six important results: (1) They increase stalk or straw growth. (2) They strengthen the crop to resist disease. (3) They hasten the growth of the crop so that it ripens days earlier. (4) They increase yield. (5) They improve quality and grade of crop. (6) They improve the catch of grasses and clovers. Whether these results be obtained depends upon the condition of the soil as to drainage, soil reaction, supply of organic matter and wisdom in choice of fertilizers. They must be chosen with the special needs of the crop and make up for soil deficiencies. Here are some things to watch as the season advances: Is there an increase in growth of crop on the fertilized than on the unfertilized land; has the fertilized crop ripened earlier; has there been more or less disease in the fertilized crop; has there been more or less insect injury; what is the comparative yield of crops; what is the quality of product to you note. Assistance in your troublesome fertilizer problems will be gladly given by your agricultural representative or by the O.A.C.

Teaching Agriculture
 Interest is being evinced by educational authorities in many parts of Ontario in the Vocational Agricultural School at Ridgeway in Kent County, an institution unique among the schools of Ontario. Established four years ago by the Ontario Government in cooperation with the local school authorities, it has become increasingly popular with the rural youth of Kent, having an enrollment of 73 pupils during the past term. Operated in conjunction with the Ridgeway high school, the students receive a thorough academic training and in addition a complete course in such practical subjects as agriculture, wood-working, horticulture, cultural engineering and motor mechanics, and instruction in livestock judging, and crops are horticulture. Biology and chemistry are two important subjects on the curriculum. At the end of a four year course, graduates are entitled to enter O.A.C. A second building has just been completed at Ridgeway before many years, particularly since the Government pays half of the cost of building and half of the tuition costs. The most impressive feature about the Ridgeway institution is the keen interest exhibited by the students in their work. This is inevitable when they are engaged in studies which bring out their own special talents. Many farmers in the district declare that the school has been a wonderful thing for their boys.

NOTICE TO CREDITORS

IN THE MATTER of the Estate of Margaret McKerral, late of the Village of Glen Williams, in the County of Halton, married woman, deceased.
 NOTICE IS HEREBY GIVEN that all persons having any claims or demands against the late Margaret McKerral, who died on or about the eighth day of March, A. D. 1929, at the Village of Glen Williams, in the County of Halton, and Province of Ontario, are required to send by post prepaid or to deliver to the undersigned solicitor for Hilliard S. Wilson and George H. Hogg, the Executors of the last will and testament of Margaret McKerral, married woman, deceased, their names and addresses and full particulars in writing of their claims and statements of their accounts and the nature of the securities, if any, held by them.
 AND TAKE NOTICE that after the fourth day of July, 1930, the said Executors will proceed to distribute the assets of the said deceased among the persons entitled thereto, having regard only to the claims of which they shall then have had notice; and that the said Executors will not be liable for the said assets or any part thereof to any person of whose claim they shall then have received notice.
 DATED at Georgetown, Ontario, this fourth day of June, A. D. 1930.
 JOHN A. THOMPSON,
 Solicitor for the said Executors,
 Georgetown, Ontario.

Prince of Wales to Launch Empress of Britain

A royal compliment to Canada as much as to the Canadian Pacific, was the opinion of E. W. Beatty, chairman and president of the Canadian Pacific Railway and chairman of the Canadian Pacific Steamships, Ltd., when announcing that His Royal Highness the Prince of Wales had consented to act as sponsor of the new giant liner of the Canadian Pacific fleet, the "Empress of Britain."
 "We are greatly gratified," said Mr. Beatty, to learn that His Royal Highness has promised to find time to go up to the Clyde to sponsor our new ship. The Prince of Wales is one of the busiest men in Europe, and it takes it that he has been led to do so out of his love for this country and his keen interest in all things Canadian. The mammoth liner will be in service next summer making regular voyages between Southampton, Cherbourg and Quebec.
 The ceremonial launching, at which the Prince of Wales will be the central figure, will take place at the Clyde side yards of John Brown & Company, the builders, on June 11, which, incidentally will be the first anniversary of the opening of largest hotel in the British Empire, the Royal York, Toronto, by the Governor-General of Canada.
 The "Empress of Britain," besides being the greatest liner entering a Canadian port, will be the most palatial and up-to-date vessel afloat and, with her speed, will make possible a transatlantic crossing of five days or less between Canada and Great Britain, and will greatly shorten the journey between Europe and Canada and the Middle and Western States. The mammoth liner will be in service next summer making regular voyages between Southampton, Cherbourg and Quebec.

Have Your Car in Good Condition before you take it on the road

Check your brakes carefully before you start out on the highway. You may have to depend on them, and they may fail you . . . to the injury of yourself or others.
 See that your headlights do not glare. The Night Patrol of the Traffic Police may stop you and issue a summons. Glaring headlights are the terror of night driving.
 Be careful. Show courtesy to others on the road. Use your common sense in deciding where, how, and at what speed you will drive your car.

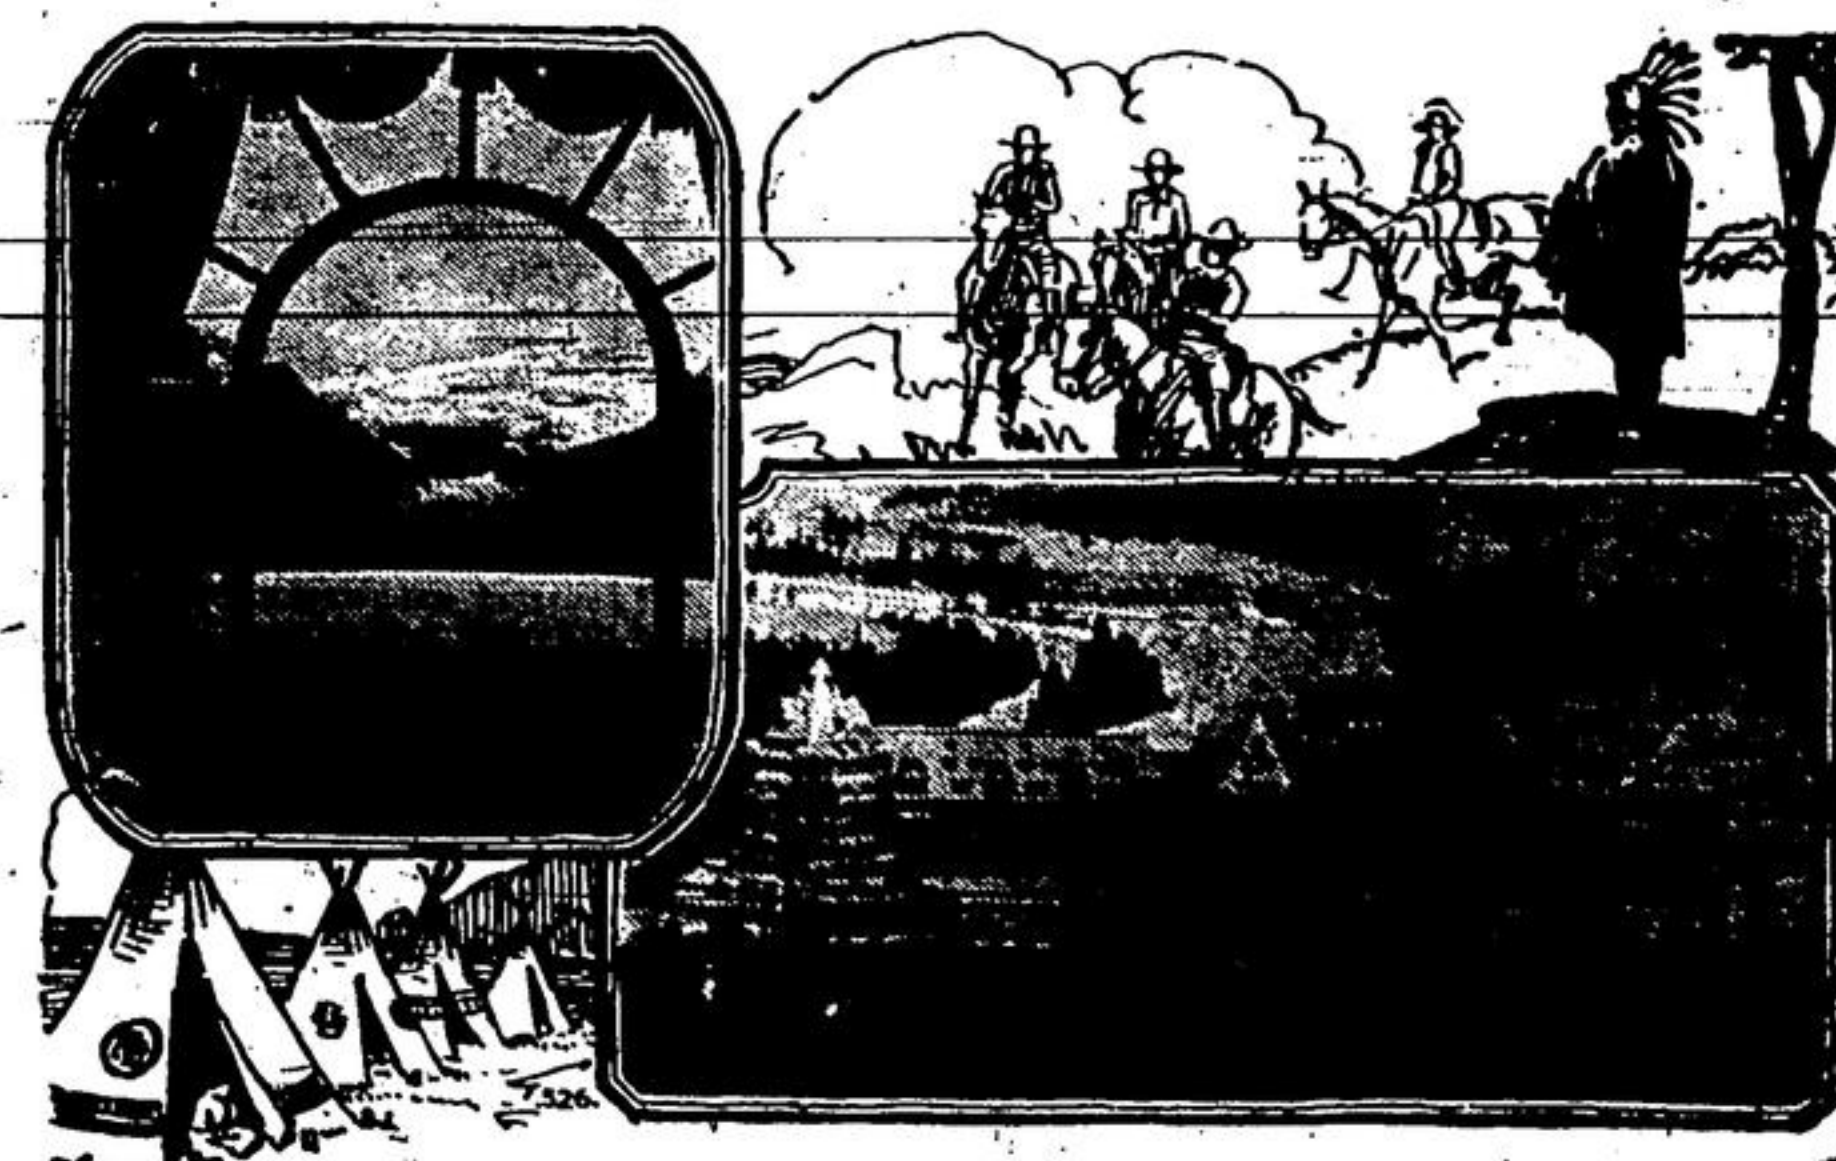

The Keystone of Safety on the King's Highway and all other roads and streets

CARE COURTESY COMMON SENSE

Highway Safety Committee

The HON. GEO. S. HENRY, Chairman

The Rockies Are Calling You

The combination of the extremes of natural and white man and all within a few miles of either hotel. You may live plainly but well on food packed into the wilds by horse or you may dine on exotic delicacies drawn from the ends of the earth. You may be strictly formal or you may wander around in plus fours—everything goes, whether you are admiring the moonlight on snow-crowned peaks or listening at your ease to the most famous of the world's orchestra playing the latest music.
