

New Gas Electric Engine

With its eight-cylinder gasoline engine and two electric motors purring and humming in soothing but powerful harmony, No. 47, the Canadian Pacific Railway's new gas-electric combined passenger and baggage car, embodying the latest developments in electro-motive traction, travels between Hamilton and Goderich and its sister car, No. 46, between

Canadian Medical Assoc.

THE SKIN
Beauty may be only skin-deep, but a healthy skin is the reflection of the health of the whole body. The skin mirrors the manner of living of the individual.
A healthy skin generally means that a healthy mode of life is followed, and that the body is in a state of health. A flabby skin usually indicates lack of exercise, and suggests that the muscles of the body are in poor shape.
Painful blotches, pimples and other such conditions very frequently mean that the habits of living are faulty. It may be that the diet is not balanced or that the need for rest is overlooked or that sufficient fresh air is not being secured.
Unfortunately, all skin abnormalities are not due to an unhygienic life and cannot be corrected by attention to the habits of living. The majority, however, are due to such causes, and they can only be corrected by giving attention to diet, rest, fresh air and the other essential health needs of the body.

The skin is nature's barrier to infection. It is therefore desirable to care for the skin, to protect it and to keep it intact. Everyone should have his own wash-cloth and towel. Common towels are responsible for the spread of skin infections.
It is also the means by which the constant temperature of the body is maintained. Through perspiration, the skin insures evaporation and the dissipation of heat. It is desirable to keep the skin clean, in order to enable it to do its best work.
The number of baths indicated for any individual depends upon his mode of life and the season of the year. The person who perspires freely as a result of his work, or on account of the heat, should take a warm bath daily, two warm baths a week are advisable for everyone.
In addition to keeping the skin clean, cool bath each morning is, to many people, stimulating and desirable. There are others who do not react well to a cool bath, and who are chilled by it.
As we have said, in most cases a healthy skin is secured by a healthy mode of living and by cleanliness. Skin conditions which do not respond to such care require medical treatment.
A healthy skin mirrors good health and is a personal asset that cannot be secured except through proper living. Questions concerning health, addressed to the Canadian Medical Association, 184 College Street, Toronto, will be answered personally by letter.

BUSINESS SUMMARY
Following is the business summary for Ontario, issued by the Bank of Montreal, under date of August 22nd—
"Warm weather and an increased tourist trade over last month have stimulated sales, but retail trade is still below last year's level. Wholesale trade is slow, but in numbers, orders received compare favourably with last year, but that the volume of trade is slow. Collections are slow to fair. Part-time schedules are prevalent in nearly all centres of industry. Furniture factories, with the exception of those working on special lines, are operating below normal. Manufacturers of cheap lines of boots and shoes are quite busy, but those making better grades are quiet. Cement plants are working to capacity. After a temporary cessation of operations, automobile plants are again in production, but with reduced staffs and on part-time schedules. Electrical manufacturers are busy on special orders. The operations of agricultural implement plants show a further curtailment from last month and steel manufacturers find orders coming in slowly. Early crops harvested show a satisfactory yield, but late crops are suffering from lack of moisture and the recent extreme heat."

A Contrast in Weather
The contrast in weather conditions during the present summer in Southern and Northern Ontario and in Quebec has been of a most astonishing nature and holds more than a touch of irony for farmers generally. In the north, particularly in the south-west, crops swelled day after day under a merciless sun for a period of nearly two months. Rainfall figures for July afford the most striking illustration of what the countryside has borne. In Southern Ontario the rainfall was 53 inches, whereas the average figure is 35 inches of moisture. Quebec, on the other hand, had the greatest rainfall in thirty years. The total for the month was 5.6 inches as compared with a normal of 3.7 inches.

BITS OF HUMOUR
On Second Thought
A Scottish workman in a large factory approached the manager for a raise in the salary he was getting. Giving a reason that he was thinking of getting married. In his pay envelope Sandy received a fairly substantial increase. Some time later the manager, meeting Sandy, inquired—"I suppose you've settled down to married life, eh, Sandy?"
"I'm no married," replied Sandy. "But didn't you apply for a raise because you were thinking of getting married?"
"Oh, ay, but I've stopped thinking."

WHY IS IT?
Why do clients of many years standing continue to send us their troublesome collections?
Why is the volume of business we handle increasing so rapidly?
Because our service is eminently satisfactory and our rates reasonable.

Georgetown Citizen's Band will furnish music during the day.

CANADIAN NATIONAL HIGH SPOTS AT C.N.E.

IMAGINE a glorious section of the Canadian Rockies borne bodily from the bosom of Mother Earth, and a giant hand reaching down into one of the Canadian National Steamships West Indies' feet and stealing a group of luxurious cabins, then you have an idea of this year's exhibit of the Canadian National Railways at the Canadian National Exhibition.

Jasper National Park is one of the two features of the exhibit. In a 50-foot long panorama of the mountains, a mother bear and her cubs go frolicking in the forest, deer are made to scamper through the brush and the noble Athabasca river sings a rippling song of contentment.

Marvelous effects are obtained by the use of colored lights. Beginning with the faint light of dawn, the sky changes to the beautiful hues of sunrise and slowly dusk comes and moving clouds are painted with reds and blues to give an excellent idea of the sunsets for which the mountains are noted.

In another part of the railway's building, visitors walk the gang plank and "over the side into the 'Lady Nelson'—recreation of the West Indies fleet. Inside the white hull, is a portion of the main lobby and, directly opposite, the purser's office. A uniformed officer is ready behind the grille and he has an efficient staff of six stewards waiting to initiate the visitor into the ship's mysteries. Leading off the lobby are rooms, exact replicas of those on board the 'Lady' ships, and showing the various types of accommodation.

News and Information for the Busy Farmer

Valuable Meadow Results
Good ordinary meadow mixtures of clover and timothy can be increased as high as 45 per cent. green weight by porous fertilization. This is the average result of ten carefully conducted tests throughout the province last summer by the Department of Chemistry. In these tests, one-half blocks of meadow were measured off during early spring and fertilizer of various mixtures was applied. In most cases the fertilizer was sown with the drill.
The average gain for the entire test was a little over a ton per acre green weight. This showed a nice return on the money invested in fertilizers. The addition made to the meadows in these tests averaged about 300 pounds per acre or represented an investment of five to six dollars per acre.

Aid to Fruit Growers
As an aid to the overseas marketing of Ontario's surplus fruit crop, the Ontario Government has decided to assist the Fruit Growers' Association insofar as guaranteeing sufficient monies to the banks to allow proper financing of the shippers. This step has been taken to allow absolute independence in marketing and will mean that the shippers will be in a position to finance export shipments, a large number of shippers who have been barred in the past will now be able to take advantage of the services of Mr. Andrew Fulton, the association's representative in Great Britain.
As a further step in organizing the province's fruit trade, the appointment is announced of Kenneth Crew of Trenton to assist P. W. Hodgesta, director of the fruit branch and secretary of the association. He will keep constantly in touch with the shippers and Mr. Fulton. Further, a series of experiments will be undertaken at once with a view to controlling the "apple scald" disease which annually causes tremendous loss to Ontario shippers.

Crop Conditions
Recent reports from agricultural representatives would indicate that the yields of fall wheat and spring grains have been exceptionally good. Weather conditions have been ideal for the storing of grain and for stock thrashing which is becoming very popular. Crops such as potatoes, beans, sugar beets, corn and tobacco, will have light fields due to lack of rainfall. The yields of all fruits, especially apples and grapes, will be detrimentally affected. Pastures in many sections were severely burned and many drymen, especially in Western Ontario, have had to resort to feeding their cattle grain and ensilage. This expense, in addition to the low price paid for milk at the cheese factories has caused the farmers no little concern. The shortage of pasture has also increased the shipment of cattle and lambs, with the result that many cattle will be sold at a loss.

Doing Valuable Work
The work done at the Ridgeway Experimental Farm is selecting and propagating a variety of beans that is free from disease and gives a much greater yield than varieties formerly grown, has alone justified the establishment of this farm. This is only one branch of work undertaken there which is of substantial benefit to individual farmers of Southwestern Ontario and to the province as a whole. Valuable work has been done with tobacco, canning factory crops, cereal grains and hops. Besides this, W. R. Reek, the superintendent and his staff have been instrumental in helping along the good work done at the Agricultural Vocational School on Ridgeway farm.
It is interesting to note that the bean growers were discouraged and disease was taking a heavy toll. As little or no work had been done in selection, the seed had become run out, resulting in a poor yield. Beans have long been an important cash crop in Kent and Essex. Mr. Reek was able to get some selected bean seed from Michigan, which he propagated the first year and placed in small lots on neighbouring farms the second year. The variety is known as Robust, and it is in general use at the present time, being resistant to disease and a heavy yielder. There are 30 acres sown to beans on the farm this year and this will go out for seed. On plots special work is done in selection to further work is done in selection to further improve the strain.
