There is Only One Right Way to Clean

TO SAY ABOUT CLEANING

A watch should be cleaned and oiled ONCE EVERY YEAR and sisting of 150 parts or more! is taken apart and the pieces are washed in a solution of gasoline which removes the dirt and oil. A cyanide bath is sometimes used and should only be used by an expert After the parts have been cleaned with gasoline, they get an alcohol bath and are dried in a special kind of sawdust. When they have been reassembled they are carefully oiled. This is how your

watch was cleaned at the factory. When your watch needs cleaning, do not for the sake of a few cents have it done where the entire movement will be dipped in some cleaning solution resulting in unnecessary wear (in certain parts that have not been cleaned) and premature replacement.
