## The Jewels in your watch

SERVE THE SAME PURPOSE AS BALL BEARINGS IN ANY LARGE MACHINE

The most common jewels in watches of good quality are rubies. The rough ruby being sawed into pieces only two-thousandths of an inch thick, thinner than ordinary writing paper. The machine that cuts them operates with such precision that the disks stop when they have cut down through the stone and half way through the paper under it, and this paper itself is only two-thousandths of an inch thick.

BRING YOUR WATCH TROUBLES TO US. WE WILL BE GLAD TO HELP YOU.

We congratulate our fellow editor on his bit of good luck.
