THONK II **Hugh Lindsay** DIRECTOR OF PROVINCIAL PLOWMEN'S ASSOCI-ATION

At the annual meeting of the On. elected a director of that organization. Halton plowmen will receive this announcement with pleasure as it brings with it well merited recognition of Mr. Chisholm's contribution in helping to build up the Halton Organization to where it is now recognized as one of the outstanding plowmens organizations in the prov

CITY SNAPSHOT GUILLY PRINT "DODGING"

Pictures may be improved during enlarging by controlling tones with a

WHEN an advanced amateur may be done in contact printing. shows some of his boautiful salon | targements. It is done by holding pictures to a group of interested but uninitiated people, some of them are auro to ask questions such as those:

those lovely tones? How did you make this picture so dark in this part and light in that? How did you | will print darker than the part from get the noft effect in this one? How which the light is held back. In did you got the light to shine so other words, the light is caused to brightly on the principal object and acarcely at all on the rest of the picturo? How do you make those objects in the shadowy parts dim yet visible; and objects in the light parts to stand out so distinctly? My camera won't take pictures like

And the cryptic answer is likely to be, "Neither will mine, exactly." "Then, how do you get all these different gradations' in shadow tones? These pictures are like paintings. Do you' touch up the negative with something?"

And the answer will be, "No, I do not touch up the negative; I dodge the print."

"Dodge the print? What do you mean-'dodge?" Then comes an explanation of a method whoreby a very ordinary picture, as recorded on the negative, may often be transformed into a work of art in the process of making-an enlarged print of it. "Bodging," in the slang of photography. means interrupting some of the light passing through the negative to the somelified paper during the salon photographs are obtained. arbiting of the picture, "Dodging" | 126

something opaque between the light source and the paper, such as a place of cardboard, in such a way as to keep the light from striking "How in the world do you get a certain area for a certain portion of the time. Thus, that part which continues to receive the full light "dodgo" a cortain atea.

Virtually, the shadow from the cardboard in the hands of the photographer is used as a paint brush. It serves to light the dark parts. In another way, a print in "dedged" by using a piece of cardboard with a hole in it. The hole lets through a pencil of light, which is manipulated over the surface of the paper and serves to darken the light parts. The intelligent use of a "shadow brush" or "light brush" in this fashion requires a preliminary study of the negative or a contact print as it would ordinarily register in order to discover where "dodging" would improve the picture. Often it means a number of trials before the

result is satisfactory. Amateurs who do not onlarge their own negatives may suggest to their photo fluisher how they think a print may be improved by "dodging," and sak him for a special job on it. Of course, the greater autbefaction comes from doing this work yourself. But that is the way many of the lovely effects we see in
