will be held on
MONDAY, NOVEMBER 22nd
— at the —
GREGORY THEATRE, Georgetown

Admission: Adults 35c; Children 25c
Curtain 8.15 p.m.

School at Hallsbury Operated Under Youth Training Plan

The Dominion-Provincial Youth Training Plan which has been launched as an experiment in human development to train youths in the basic essentials of various vocations is now in operation.

A Mining School has been opened at Hallsbury under the direction of the able and experienced Principal W. A. Tuke. Here the forty-eight young men are learning some geology, mineralogy, assaying, milling, surveying, and the other essentials which will equip them to become assistants to mining engineers or to hold other practical jobs. Elsewhere at Temagami and in Algonquin Park, other boys are learning forestry sculling.

Regarding the school the Toronto Globe and Mail has the following:—
"The forty-eight young men who came to Hallsbury under the plan receive free schooling and \$10 a week. Out of this they must pay for food and lodging, laundry and all other expenses. Their course will comprise about five and one-half months of practical and theoretical studies. Already they have visited operating mines. They will visit more, through courtesy of mines owners."

The extra technical teachers were allotted Mr. Tuke to undertake the instruction of the boys. The regular attendance at the mining division of the big technical school is ninety. These ninety students take a longer course. The forty-eight will be finished at the end of March, 1938. The regular students won't finish for two months more. The school is considered one of the best of its kind and is the second oldest in Canada.

When these students finish they will probably have jobs waiting for them. The plan is a development of the youth conference which originated in Ottawa, operates through co-operation of the provinces and is dependent on the interdepartmental co-operation, in turn, of the various Provincial offices affected. For instance, Welfare and Mining and Labor are part of the administration which placed the forty-eight boys in Hallsbury. And part of the plan calls for the development of a placement division which, by selling the scheme to employers, searches out the jobs which will be ready for the boys.

The boys were selected by a rather rigid system. Certain minimum educational requirements were set: at least matriculation (this applies to this group of forty-eight). Some usually are ex-university men. Their background was investigated, revealing that many came from once comfortably well-to-do families. All were jobless, with their families unable to help them.

Then practical mining men set standards. All were subjected to physical tests. Even chests were X-rayed to reveal any tendencies toward the types that are susceptible to silicosis. Those that were too tall—and might bump their heads underground—were turned down. Those who were too slight to stand up under heavy manual labor also were dropped. The forty-eight are the cream of 300 which, in turn, were the first selection from a bigger group.

Mr. Gordon Alcott of Georgetown, was one of the fortunate young men chosen out of the 300 and is now attending the school.

What Some Other Papers Say About Us

After appearing for seventy years as a 4-page eight column weekly, The Georgetown Herald has made its debut as an 8-page six column paper. The writer served his apprenticeship in the Herald office and we congratulate our old boss, Mr. J. M. Moore, upon this forward step, which is a decided improvement. — Powasson News.

The Georgetown Herald celebrated its 71st birthday last week by changing from a four-page weekly (known as the blanket sheet) to an eight-page paper. The change improves the appearance of our contemporary, and should be appreciated by readers and advertisers alike. The Herald is one of our most welcome exchanges, and we wish "Joe" Moore, the editor, continued success and prosperity. — Burlington Gazette.

The Georgetown Herald came out last week with an eight-page, six column sheet, instead of the former large four pages. The change was a decided improvement and the general appearance of The Herald is a credit to Mr. Moore and his staff. — Erin Advocate.

After seventy-one years of service to Georgetown citizens as a four page newspaper The Herald has been converted to an eight page newspaper. The publisher, J. M. Moore, has always given his territory a newsy paper and this recent forward step will make readers and advertisers more appreciative. — Bolton Enterprise.

The Georgetown Herald is 71 years old. In all those years it has been a four-page, seven or eight column paper. Last week it appeared in new form. It is now an eight-page paper, well printed and presenting a modern appearance. The Conservator offers congratulations to its enterprising and successful contemporary. — Brampton Conservator.

The Georgetown Herald was last week issued in greatly improved form. Our neighbor is now an eight page six column newspaper. The front page is devoted entirely to news and the advertisements all placed on remaining seven pages. The Herald in

The SNAPSHOT GUILD AUTUMN SNAPSHOTTING

Fall landscapes add much to the artistic appeal of your photo album.

WE MAY sing of the flowers that bloom in the spring—trials—but a song cannot adequately describe the wonderful colorings that Mother Nature bestows upon the trees and shrubs in the fall. The woods are ablaze with color and new colorful fall flowers appear. Lakes, rivers, and the well known babbling brook seems to reflect these bright colors.

Now, let's consider the type of film to use for fall colors. For example, suppose you are taking a picture of a bed of fall flowers—some deep orange or red and others dark blue. Ordinary film, not the chrome type, would yield a print in which the brighter colored flowers would appear darker than the blue ones, though to the eye the orange and red flowers appeared lighter. It would not, in other words, give true color brightness values in black and white print. However, with what is known as panchromatic film the true tonal values in monochrome rendering will be obtained.

Renderings of color and cloud effects are further improved by the use of proper color filters with any type film, including the chrome and panchromatic.

A filter is a specially prepared disc of colored gelatine, between glass, which is slipped over the camera lens. Its function is to hold back certain rays of light and let others pass through. Although there are several kinds, I believe the beginner who has never used a filter might choose

between the two most popularly used, or better yet, have both to use when necessary to improve the quality and artistic appearance of the snapshot.

One of these filters is known as the K-2. When using the K-2 filter with chrome type film, it is necessary to increase the exposure over that which you would give without the filter about 3/4 times. With supersensitive panchromatic film the exposure with a K-2 filter need be increased but two times.

The other filter is used largely to photograph clouds in a landscape with NO increase in exposure time. This is called a Sky Filter, one half of which is yellow, and the other half clear. The reason why this filter can record both clouds and landscape without requiring any increase in exposure is that the sky is photographed through the yellow part of the filter while the landscape is photographed through the part which is not colored. The yellow part of the filter holds back the blue of the sky somewhat and gives the white clouds more chance to record their real beauty.

Your nearest dealer in photographic materials will gladly give you more information regarding the use of color filters and I am sure that when you realize the great difference the use of a filter makes in the appearance of your snapshots you will become a confirmed user of this inexpensive accessory.

its new form, is similar to the present make-up adopted by The Free Press seven years ago, but of fewer columns and size. We congratulate Editor J. M. Moore and his staff on the very marked improvement in The Herald and the greater service that the newer form will render to Georgetown and the territory surrounding. It is keeping well abreast of the times and no doubt readers will appreciate the new and more convenient form.—Action Free Press.

CANADA'S TRADE FIGURES

Increasing at the rate of about \$200,000,000 per annum, Canada's exports may shortly reach once more the figures of the year 1929. Imports have been increasing more slowly, but will speed up with increased buying power. A comparison of the nation's trade for the twelve months ended with September in 1929 and 1937 is as follows:

	1929	1937
Exports	\$1,232,896,414	\$1,159,780,174
Imports	\$1,299,550,895	777,342,504

Total trade \$2,632,447,309 \$1,937,122,678
Exports exceeded imports by \$ 33,345,619 \$ 382,437,670

The excess of exports is the so-called "favorable balance of trade," but, as has been frequently pointed out, it is only a balance of "visible trade" and does not include such vital items as tourist trade, movie royalties, insurance payments, remittances, capital investments and a dozen others. The export figures given above include those of foreign goods re-exported, as well as Canadian products. The figures represent values. On a volume basis, the comparison with 1929 would show an even greater progress towards recovery.

Merchant—Everything that college men endorse is not necessarily good. Friend—Why do you take that stand?
Merchant—Because I have a check from one of them.

Mother-in-law—That's a cute little tree on the front lawn, John—I mean the one that's about a foot high.
Son-in-law—Yes, I just planted it. I hope the next time you come, you'll be able to sit in its shade.
